OPERATING INSTRUCTIONS

- . The doorbell and the button's code must be matched.
- . After the button is installed the nine-volt battery, using screws, on the inside of double-sided sponge paper sticker to fix at the gate, put the antenna straightly (Make sure not to be too close to the metal things, as the door is hardware one, the aerial cannot approach the metal). Please avoid the rain from showering directly. When not pressing, don't eat into the power. The battery can be used for one year (Counting by twenty times daily).
- . Open the battery lid of the doorbell the batteries. The batteries which you are invited would be the alkalined ones. (Three No.5 batteries, "AA size". It is shorter in lives and easier to see: the electrolytes for using the ordinary batteries. Therefore, they are not suitable to be used.) Exausing the power is extremely Low. The doorbell can be placed with your desires, or installed at any positions in the interior. After using for a long period of time, please change the batteries which are out of normal uses.
