

Model 520 Operational Description:

The model 520 is a remote control used in industrial applications such as remote control of hoists, trolleys and other automatic control systems. The device utilizes narrowband FM to transmit its control information(Up, Down, East, West) at the carrier frequency of 301.105 MHz. The transmitter fundamental frequency is set by the use of a quartz crystal. The device operates on 3.0 VDC derived from two AA batteries.
