RE: Mobile Access Networks

FCC ID: OJFMA1K-IDEN-SMR

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) Previous comment 7 was in reference to any FCC ID's associated with device. Previous certifications appears to include the following: "Part of RF Distribution System may include FCC ID: OJFMA1000, FCC ID: OJFMA1200 and/or FCC ID: OJFMA850". Please comment on all applicable FCC ID's so the grant note will be correct.
- 2) Per email discussions, the RF exposure and users manual should be adjusted. RF exposure should clearly show composite power given the antennas and minimum cables yields an EIRP of < 1.5 Watts to support not requiring RF evaluation under 2.1091.
- 3) The last response mentioned that iDEN 800 and SMR 800 is the same RHU. However the tested modulations only appear to support iDEN for the 800 MHz Band. FCC expects conducted spurious, occupied bandwidth, and power tests performed for each type of modulation . Please explain.

Timothy R. Johnson
Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
