Subject: FCC Certification for TX-434-5B

Dear Sirs:

The purpose of this statement is to confirm that Scotia Technologies Canada, Inc. will alter its production units for the TX-434-5B as per the modifications listed in our test report.

Modifications¹

A 50 pF capacitor that was in-parallel with L2 was removed. An additional 18 nH inductor (designated as L3) was installed (on the push-button side of the PCB) in-series with L2. These modifications reduced spurious emissions.

Sincerely,

Jim Speers – President
Scotia Technologies

¹ No warranty is expressed or implied as to the suitability of this modification other than reduction of the EUT's radiated harmonics.
