

American Telecommunications Certification Body Inc.
6731 Whittier Ave, McLean, VA 22101

April 11, 2004

RE: Rexon Industrial Corp., Ltd.

FCC ID: P66GDK02

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) The block diagram appears to be for an entire system and does not appear to be for the device being approved. Additionally it appears to include a RX but not include a TX. Additionally, the block diagram should show the frequencies of all oscillators in the TX device (CFR 2.1033(a)(5)). Please provide the correct block diagram for the TX.
- 2) Please justify the use of the DoC labeling information (FCC logo). This labeling is reserved for particular approvals that do not appear to apply to this application (PC Peripheral, Stand alone RX, etc.). If proper justification can not be provided, please remove the FCC logo from the labeling.
- 3) It appears that the device may only be sending data. Please explain what types of control signals are being sent to meet the requirements of 15.231(a). Note that it appears that maybe a control signal is not necessary to be sent with each button press. Please explain.
- 4) The test report does not appear to contain any data > 1 GHz. Please explain.
- 5) The FCC shown on page 41 of the users manual does not appear correct.

Timothy R. Johnson
Examining Engineer
