

FCC Application Processing Branch
Re: FCC ID PCKCDRTL841FL0001
Applicant: ComSpace Corporation
Correspondence Reference Number: 18129
731 Confirmation Number: EA99429

1) The Test Report says that the device is 4 watts on the cover page. There appears to be two frequency bands listed on the covert page. Is one of them for the receiver. Please correct and submit a new cover page.

This mistake is a typo; left over from the mobile report that was used as a template. Our apologies. A new body report has been sent to replace the body report that you have.

2) Verify that the substitution method was used for the radiated measurements.

The data in section 4 of the new updated body of the report was measured using the substitution method of EIA/TIA-603-1992

3) The table for emissions masks in Section 90.210 indicates in footnote 3 that the frequencies between 851 and 866 MHz fall under the emissions mask of 90.691. Submit an occupied BW plot for this band with the Section 90.691 emissions mask.

Please see the plot that has been uploaded for your reivew.

4) Section 2.2 of the test report list channels tested and then shows a Table with the measured RF power. These frequencies do not agree. Please explain the discrepancy.

This mistake is a typo; left over from the mobile report that was used as a template. Our apologies
