

FCC ID: PD9AX210D2
IC: 1000M-AX210D2

The device is considered to be too small for the label since it is impracticable to label with a font size that is four-points or larger. The FCC ID is instead placed in the users manual as allowed by KDB 784748 and as allowed by ISED previously on this form factor.

Subject: RE: Label Permission Request

Good Day Tim,

Label exemption would be acceptable for this device. Please place the label information in accompanying literature.

Regards,

Subject: Label Permission Request

Intel submitted and application to ACB in December. For the labeling exhibit they submitted the label with an explanation that the form factor has been accepted in the past by ISED. ISED asked for us to provide Intels previous correspondence in order to proceed as well as something denoting appropriate sizes and the application has been in pass back since December.

Our contact at Intel is fairly certain ISED has granted them permission in the past on this form factor, but has not had the time to investigate and provide the past proof and is currently "buried" in other priorities. Therefore on their behalf we are submitting the attached and requesting permission for the labeling to be placed into the manual based on the information provided.

They use the basic form factor for many devices and have several upcoming approvals based on the same form factor (known as D2 to Intel) as well. If possible we would like to obtain permission for Intel to place the labeling in the manual for all certifications that they use this particular form factor.

Could ISED please review the attached and provide feedback as appropriate?

Thank You,

Timothy R. Johnson, iNARTE Certified EMC Engineer (No. EMC-002205-NE) and Wireless Device Certification Professional (No. WDCP-100101)

FCC/IC Label & Location for Intel Models using form factor D2

- FCC: Per KDB 784748 the marking may be placed in the user manual if the device is unquestionably too small to be readable (smaller than 4-6 pt font).
- IC: Per RSS-GEN 4.1 – If the dimensions of the product are extremely small or it is not practical to place the label or marking on the product....the label shall be placed in a prominent location in the users manual supplied with the product, as agreed upon with ISED prior to the certification application.
- The D2 models are considered to meet this criteria since the module size is 12mm x 16mm and 4pt font is the largest that can be used for module labeling which requires magnification for clear viewing.

Due to size, only the manufacturer ID & model number will appear on the module for identification.

The Certifications Numbers: FCC (per KDB 784748) and with ISED's permission will be displayed in the Uses Guide.
