

Use the record icon to record a voice, the play icon to play the recorded voice, and the list icon to see the recorded file list.

Select the record icon, and the record is started while displaying the following screen.

Press the left button if you want to pause the record and press the right button if you want to finish it.

Select the list icon and appear the recorded file list on the screen up to now.

If selecting the play icon or pressing the play button in the list screen, the

following screen appears.

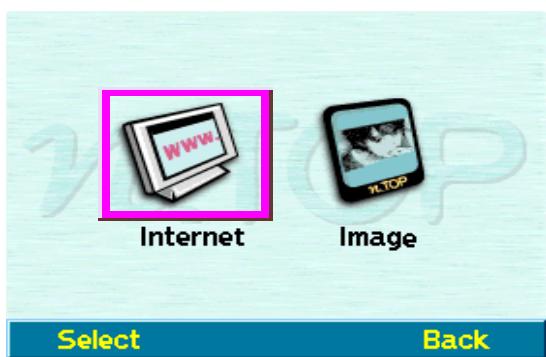

The screen explanation refers to MP3 function.

## 6. PAVIC

Designate PAVIC icon, and appear the following screen.

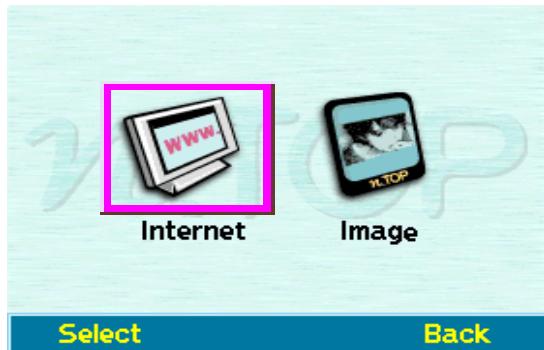

Select this icon, and appear the following screen.

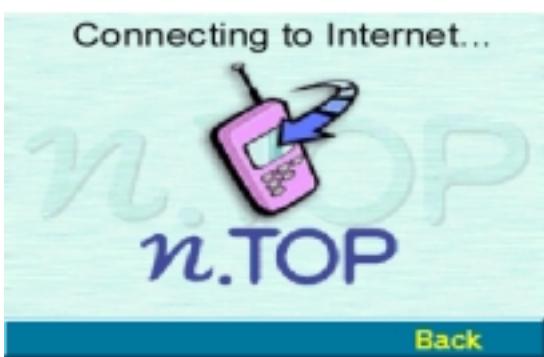

### 1. PAVIC Web Browser

Designate PAVIC icon, and appear the following screen.

Select this icon, and appear the following screen.

Select web browser, phone as below, and receive web page.

If access is successful, PAVIC initial screen as below can be changed.

Up/down cursor key is used for scrolling the screen.

Use left/right key to move the hyperlink on the screen. (Similar to tab key in PC)

Use left button on the screen below to move to the present selected hyperlink.

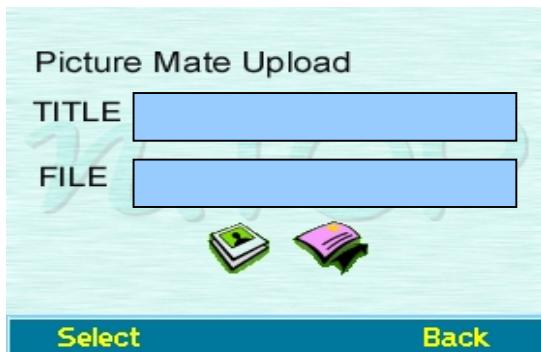

Center button corresponds to the back button in PAVIC.

Right button is the button to exit PAVIC.

When exiting, exit it after disconnecting the connected access and return to PAVIC menu.

## 2. Picture-friend

Select “ picture-friend” , and appear the following screen.

Input a picture name and select the first icon below.

And appear the album that can select a picture for uploading the picture-friend server.

Select the picture to change into picture-friend and return to the previous screen if pressing the left button.

The picture selection is written to correspondent file name.

If pressing the lower right side of icon, phone to PAVIC picture-friend server and upload the changed picture friend.

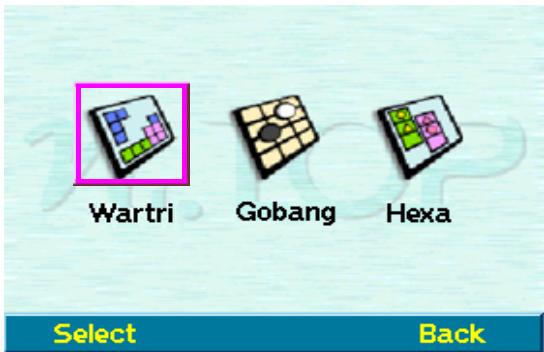

The uploaded picture can be checked with the web browser of PAVIC, mobile phone of WAP support, or Internet.

## 7. Game

Designate the game icon in top menu, and appear the following screen.

Select this icon, and three types of game are appeared.

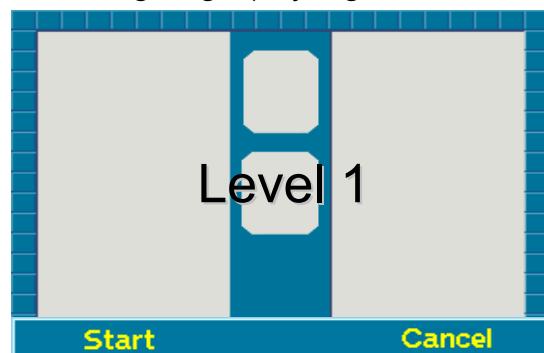

(1) In case of selecting war-tree, select whether single player game or network

game by the access of game server.

If selecting single player game, the user waits to select start or cancel as the

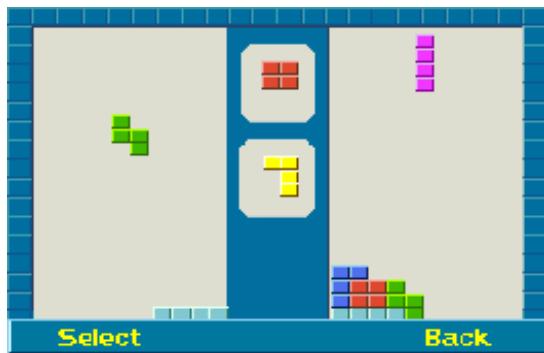

screen below.

If you select the start, you have a game with PAVIC terminal.

Left/right key is used to move war-tree block and up/down key is used to rotate the block.

The select key is used to drop the block.

When you press the Esc button even if you are in game, you can exit game and go back to the previous screen.

In case of selecting network game, access to network game server

Inform user to be in process of access to network game server.

In case of failing to access to game server, inform user and return to the previous screen.

In case of not being connected at all times, please contact with service center.

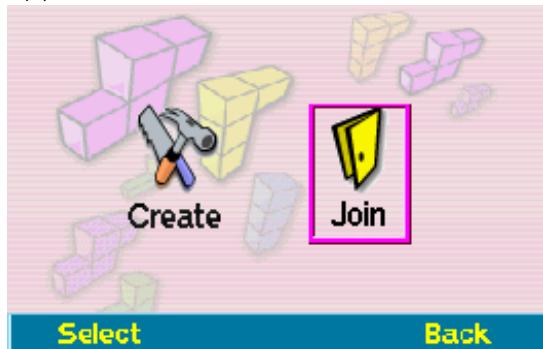

Once you succeed to access to game server, you can select the game server as follows.

If you select the server that you want to join, ask whether the room open/join or not.

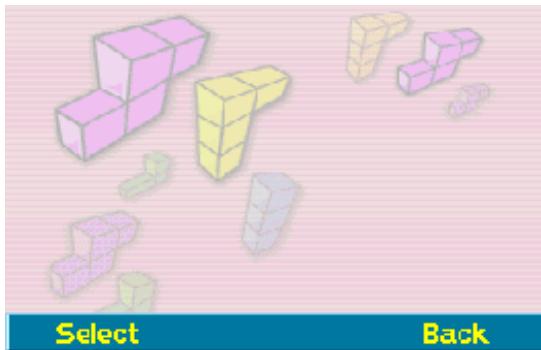

If you select a server, the icon that selects one of the game room open / join is appeared.

If you select join, the list of game room that you can join at present is outputted. After selecting room that you want using up/down key, press the select button and start the game.

If you select the game room open, input the name of game room through editor.

How to use editor is the same as the case of e-mail.

After succeeding to access, both of them select start and game is started.

When you cannot access to the selected room, appear the following message and return to the menu to select the game room open or join again.

If the opponent enters the game room after opening the game room, appear the following screen.

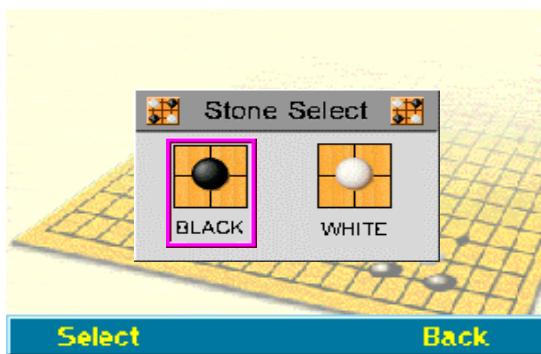

Both of them select start, and game is started.

(2) In case of selecting “ Omok ” , select whether single player game or network game by the access of game server.

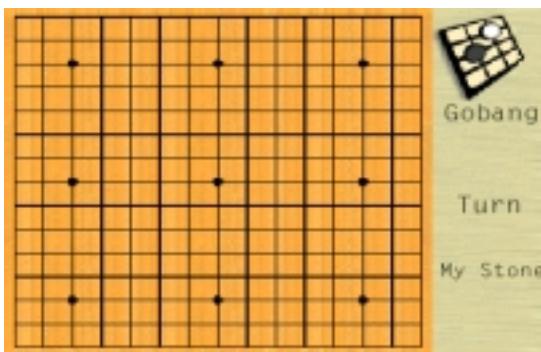

In case of selecting single player game, ask you to select a black stone or a white

stone as below.

Select a stone and start game with black stone first.

After moving the cursor using cursor key, put the stone using the select key.

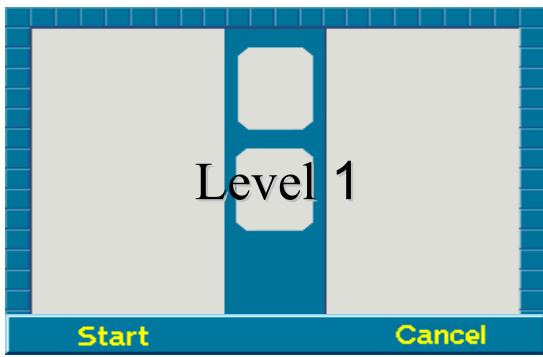

In case of selecting network game, try to access to game server

(3) In case of selecting Hexa, select whether single player game or network game by the access of game server.

In case of selecting single player game, user waits to select start or cancel as

below screen.

If you select start, you start a game alone. Left/right key is used to move the block and up/ down key is used to rotate the block.

The select key is used to drop the block. When you press the Esc button even if you

are in game, you can exit game and go back to the previous screen.

In case of selecting network game, try to access to game server using A kind of game room, open, and join are also progressed by all same methods.
