

# chapter 5:Hardware Installation

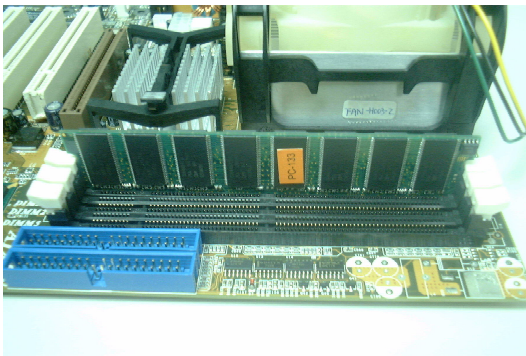

## 3.Installing the CPU Fan

The CPU should have a fan attached to prevent overheating. If a fan is not present, user should purchase a fan prior to turning on the system. The recommended heatsink for the Socket 370 processor are those with three-pin fans that can be connected to the fan connectors on the mainboard. It provides the +12 Volts DC for your CPU cooling fan.

## 4.Installing the Memory

Memory is installed in DIMM Sockets as follows :

After you have set the DIMM firmly into its socket, snap the white clip holders up to lock in the DIMM.
