

Statement of cable loss

Product name: Wireless LAN Access Point

Model: AP6050DN

FCC ID: QISAP6050DN

About RF antenna gain shown in provided antenna specification of AP6050DN is different from the one shown in FCC test reports of this FCC Certification, we hereby state as below:

1. We considered cable loss of product veneer feed point to the antenna port is 2 dB
2. The maximum antenna gain is subject to actual test of AP product when it is used with antenna monomer in actual use. maximum antenna gain value shown in antenna specification is just for product design reference only;
3. AP6050DN RF antenna gain shown in test report is from actual test for the product, the product has good consistency, so even with more testing there will be no larger value of the antenna gain then the one shown in the FCC test reports.

We considered the antenna gain of 4dB in RF test report and MPE report for product AP6050DN based on above reasons.
