

Report No: SYBH(R) 01122006EB
FCC ID: QISBTS3606E-800

**FCC TEST REPORT OF
Huawei CDMA2000 800MHz Base
Station**

M/N: BTS3606E-800

Jan. 13, 2007

Reliability Laboratory of Huawei Technologies Co., Ltd.

All Right Reserved

Notice

1.	The laboratory has obtained the accreditation of China National Accreditation Committee for Laboratories (CNAL), and accreditation number: L0310.
2.	The laboratory has obtained the accreditation of THE AMERICAN ASSOCIATION FOR LABORATORY ACCREDITATION (A2LA), and Accreditation Council Certificate Number: 2174.01.
3.	The laboratory has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements. The site recognition number is 97456.
4.	The laboratory also has been listed by the VCCI to perform EMC measurements. The accreditation number is C2583, R2364, and T256.
5.	The test report is invalid if not marked with "exclusive stamp for the test report".
6.	Any copy of the test report is invalid if not re-marked with the "exclusive stamp for the test report".
7.	The test report is invalid if not marked with the stamps or the signatures of the persons responsible for performing, revising and approving the test report.
8.	The test report is invalid if there is any evidence of erasure and/or falsification.
9.	If there is any dissidence for the test report, please file objection to the test centre within 15 days from the date of receiving the test report.
10.	Normally, the test report is only responsible for the samples that have undergone the test.
11.	Context of the test report cannot be used partially or in full for publicity and/or promotional purposes without previous written approval of the laboratory.

REPORT ON FCC Test of Huawei CDMA2000 800MHz Base Station

M/N: BTS3606E-800

Report No: SYBH(R) 01122006 EB

REGULATION **FCC CFR47 Part 2: Subpart J;**
FCC CFR47 Part 22: Subpart H;
FCC CFR47 Part 15: Subpart B;

CONCLUSION There are 9 items need to be tested, 9 items have been tested. The sample of the model completely meets the requirements

Final Judgement: Pass

-	15.109	Radiated Emission of Enclosure in Idle Mode	PASS

2 Product Description

2.1 Production Information

2.1.1 General Description

The BTS3606E is located between the base station controller (BSC) and the mobile station (MS)/access terminal (AT) in the CDMA network. Under the control of the BSC, it serves one cell or several logical sectors.

The BTS3606E is connected with the BSC through the Abis interface. It manages the following:

- Radio resources
- Radio parameters
- Interfaces

It also implements radio transmission over the Um interface, as well as the related control functions. The BTS3606E is an indoor BTS supporting multi-cell configuration.

The BTS3606E has the following features:

- Large capacity
- Compact size
- Easy installation
- Flexible coverage

It is ideal for the areas with medium or high traffic density.

The BTS3606E system has advanced structure, which is compatible with CDMA2000 1X and CDMA2000 1xEV-DO (DO Enhancement, DO Rev A). It can operate in the following modes:

- CDMA2000 1X mode
- CDMA2000 1xEV-DO mode
- CDMA2000 1X/1xEV-DO hybrid mode

The BTS3606E can be expanded smoothly to meet the requirements of CDMA AIE phase I.

The BTS3606E supports CDMA trunking communication technology, and thus provides trunking functions such as Push To Talk (PTT).

2.1.2 Main Equipment Technical Data

Input Rated Voltage:	=== -48V
Rated Power:	Max 3550 W
Dimensions:	650 (depth) ×600 (width) ×1600 (height) (mm ³)
Weight:	280kg
Transmitt Frequency:	869.85MHz ~887.82MHz
Receive Frequency:	824.85MHz ~842.82MHz

3 Test Site Description

The test site of:

***Huawei Technologies Co. Ltd.
P.O. Box 518129
Huawei base, bantian,
Longgang District, Shenzhen, China***

The test site description has been submitted to  and registration granted under the registration number **97456** on April 20, 2006. The test site has been accredited by

and the accredited number is **2174.01** in Jan of 2006.

3.1 Testing Period

The test have been performed during the period of

Dec. 10, 2006 to Dec. 30, 2006

4 Product Description

4.1 Technical Characteristics

4.1.1 Frequency Range

A.

Uplink band:	824.82 to 842.82 MHz
Downlink band:	869.85 to 887.82 MHz

4.1.2 Channel Spacing / Separation

Channel spacing:	30 KHz
Channel separation:	1.23 MHz

4.1.3 Type of Emission

table 2. Type of Emission

Emission Designation:	1M25F9W
-----------------------	----------------

According to CFR 47 (FCC) part 2, subpart C, section 2.201 and 2.202

4.1.4 Environmental Requirements

table 3. Environmental Requirements

Minimum temperature:	- 5°C
Maximum temperature:	+ 50 °C
Relative Humidity:	5%-95%RH

4.1.5 Power Source

table 4. Power Source

DC voltage nominal:	$\overline{=}$ -48 V
DC voltage range	-60V ~ -40V
DC current maximal:	50A

4.1.6 Tune-up Procedure

According to CFR (FCC) part 2, subpart 2, section 2.1033(c) (9).

Please reference the document Tune-up Procedure in TCF.

4.2 EUT Identification List

6 Transmitter Measurements

6.1 Maximum Channel Power

6.1.1 Test Conditions

table 7. Test Conditions

Preconditioning:	1 hour
Measured at:	Antenna connector
Ambient temperature:	23.5°C
Relative humidity:	55%

6.1.2 Test Specifications and Limits

6.1.2.1 Specification

CFR 47 (FCC) part 2.1046 and part 22.913

6.1.2.2 Supporting Standards

table 8. Supporting Standards:

EIA/TIA-603-C: 2004	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
EIA/TIA-102-CAAA:1999	Digital C4FM/CQPSK Transceiver Measurement Methods (ANSI/TIA/EIA-102.CAAA-1999)
3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.1.2.3 Limits

Compliance with part 22.913, in no any case may the peak power of a base station transmitter exceeds 100 watts. $W \text{ (dBm)} = 10 * \log (W \text{ watts})$.

table 9. Limits

Maximum Output Power (Watts)	< 500 Watts
Maximum Output Power (dBm)	< 57 dBm

6.1.3 Test Method and Setup

Base Station was connected to the wireless signal analyzer R&S FSQ40 via the one RF connector. Other RF connectors were connected to match load. The band class is set Band Class 0(800MHz). BTS was controlled to transmit Maximum power by console computer. Measure and record the Maximum Channel Power of the Base Station by the R&S FSQ40.

Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an RMS equivalent voltage. The measurement results shall be properly adjusted for any instrument limitations, such as detector response times, limited resolution bandwidth capability when compared to the emission bandwidth, sensitivity, etc., so as to obtain a true peak measurement for the emission in question over the full bandwidth of the channel.

Test setup

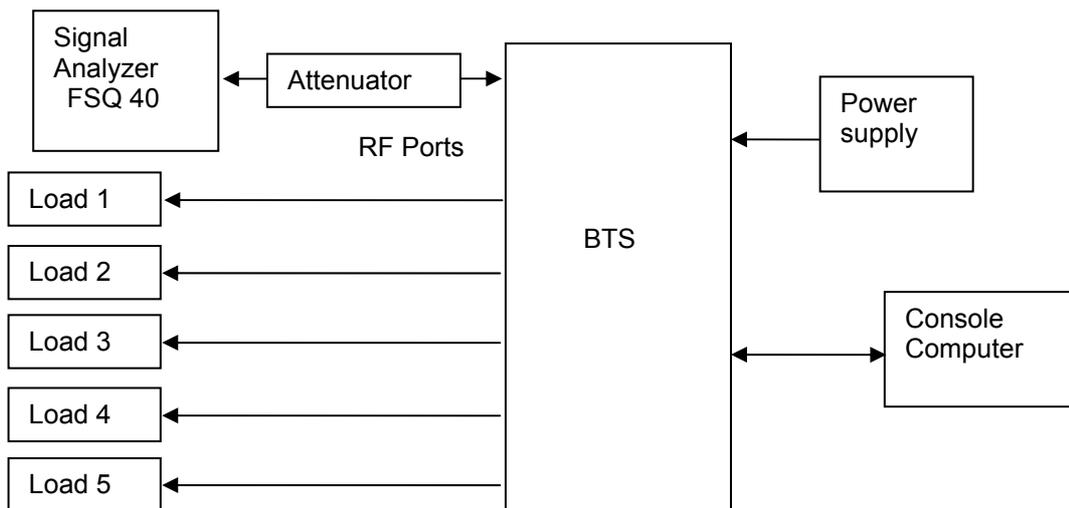

Figure 1. TEST SETUP

6.1.4 Measurement Results

The system is operated as 'Per-Channel Power' type.

For CDMA2000 1X system, set the base station to transmit a signal modulated with a combination of Pilot, Sync, Paging, and 6 traffic channels. For CDMA2000 1X EV-DO system, configure the MAC channel with 14 MAC indices, i.e. the RA channel and 13 RPC channels.

CDMA2000 1X

A. Single Carrier:

table 10. Measurement Results for single carrier

TEST CONDITIONS		Maximum Output Power					
		Channel1018 869.85MHz		Channel384 881.52MHz		Channel594 887.82MHz	
		dBm		dBm		dBm	
		Measured	Limit	Measured	Limit	Measured	Limit
T_{nom} (25 °C)	V_{nom} (-48 V)	43.79	< 57	43.21	< 57	43.10	< 57

B. Two Carriers:

3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.2.2.3 Limits

No specific modulation characteristics requirement limits in part 2.1047 and part 22 subpart H.

table 16. Limits

Limits	Rho > 0.89
--------	------------

6.2.3 Test Method and Setup

Base Station was connected to the wireless signal analyzer R&S FSQ40 via the one RF connector. Other RF connectors were connected to match load. The band class is set Band Class 0(800MHz). BTS was controlled to transmit Maximum power by console computer. Measure and record the Code Domain Power and the constellation of the Base Station by the R&S FSQ40.

Test setup

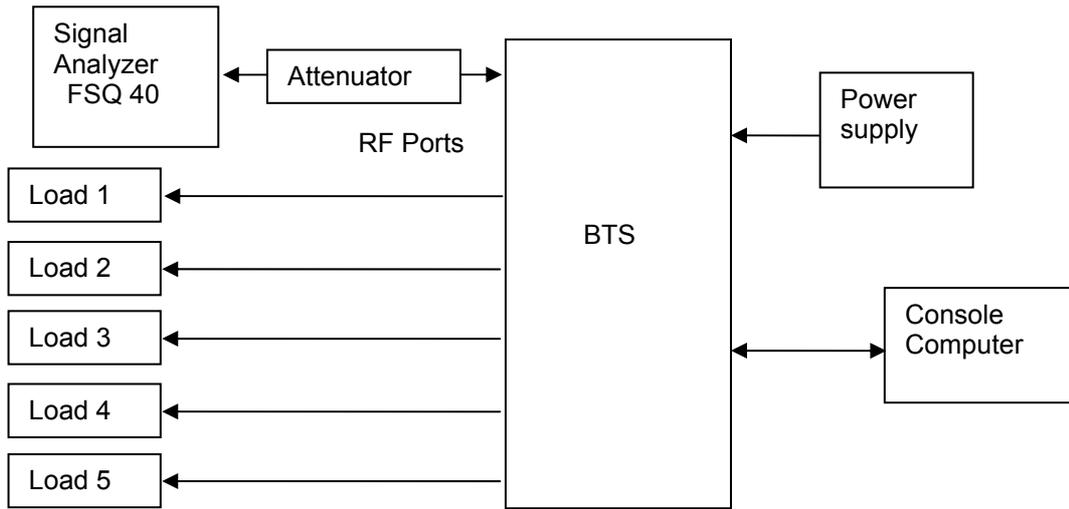

Figure 2. TEST SETUP

6.2.4 Measurement Results

For the CDMA2000 1X, the measurement was made based on two Radio Configurations: RC1 and RC3. The modulation mode of RC1 is BPSK, and the modulation mode of RC3 is QPSK. For the CDMA2000 1X EV-DO, the modulation mode is 16-QAM.

CDMA2000 1X:
RC1:

table 17. Measurement Results for RC1

TEST CONDITIONS		Rho(RC1/1)		
		Channel384 881.52MHz		
		N/A		
		Type	Measured	Limit
T_{nom} (25 °C)	V_{nom} (-48V)	BPSK	0.98585	0.89

RC3:

table 18. Measurement Results for RC3

TEST CONDITIONS		Rho(RC3/3)		
		Channel384 881.52MHz		
		N/A		
		Type	Measured	Limit
T_{nom} (25 °C)	V_{nom} (-48V)	QPSK	0.99936	0.89

CDMA2000 1X EV-DO:

table 19. Measurement Results for EV-DO

TEST CONDITIONS		Rho		
		Channel384 881.52MHz		

		N/A		
		Type	Measured	Limit
T _{nom} (25 °C)	V _{nom} (-48V)	16-QAM	0.99131	0.89

6.2.5 Conclusion

The equipment **PASSED** the requirement of this clause.

For the measurement results refer to appendix A with 4 pages.

6.3 Occupied Bandwidth

6.3.1 Test Conditions

table 20. Test Conditions

Preconditioning:	0.5 hour
Measured at:	Antenna connector
Ambient temperature:	25 °C
Relative humidity:	55 %

6.3.2 Test Specifications and Limits

6.3.2.1 Specification

CFR 47 (FCC) part 2.1049 and part 22 subpart H

6.3.2.2 Supporting Standards

table 21. Supporting Standards:

EIA/TIA-603-C: 2004	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
EIA/TIA-102-CAAA:1999	Digital C4FM/CQPSK Transceiver Measurement Methods (ANSI/TIA/EIA-102.CAAA-1999)
3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.3.2.3 Limits

No specific occupied bandwidth requirement in part 22 subpart H, but the occupied bandwidth was defined in part 2.1049: the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured.

table 22. Limits

Upper /lower frequency limits	0.5% of the mean power
-------------------------------	------------------------

6.3.3 Test Method and Setup

Base Station was connected to the wireless signal analyzer R&S FSQ40 via the one RF connector. Other RF connectors were connected to match load. The band class is set Band Class 0(800MHz) . BTS was controlled to transmit Maximum power by console computer. Measure and record the Occupied Bandwidth of the Base Station by the R&S FSQ40.

The OBW, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured under the following conditions as applicable:

Refer to 47CFR part2.1049 section (g)&(h).

(g) Transmitter in which the modulating base band comprises not more than three independent channels - when modulated by the full complement of signals for which the transmitter is rated. The level of modulation for each channel should be set to that prescribed in rule parts applicable to the services for which the transmitter is intended. If specific modulation levels are not set forth in the rules,

the tests should provide the manufacturer’s maximum rated condition.

(h) Transmitters employing digital modulation techniques - when modulated by an input signal such that its amplitude and symbol rate represent the maximum rated conditions under which the equipment will be operated. The signal shall be applied through any filter networks, pseudorandom generators or other devices required in normal service. Additionally, the occupied bandwidth shall be shown for operation with any devices used for modifying the spectrum when such devices are optional at discretion of the user.

Measurement bandwidth (RBW): 30 kHz
 Video bandwidth (VBW): 100 kHz

Test Set-up

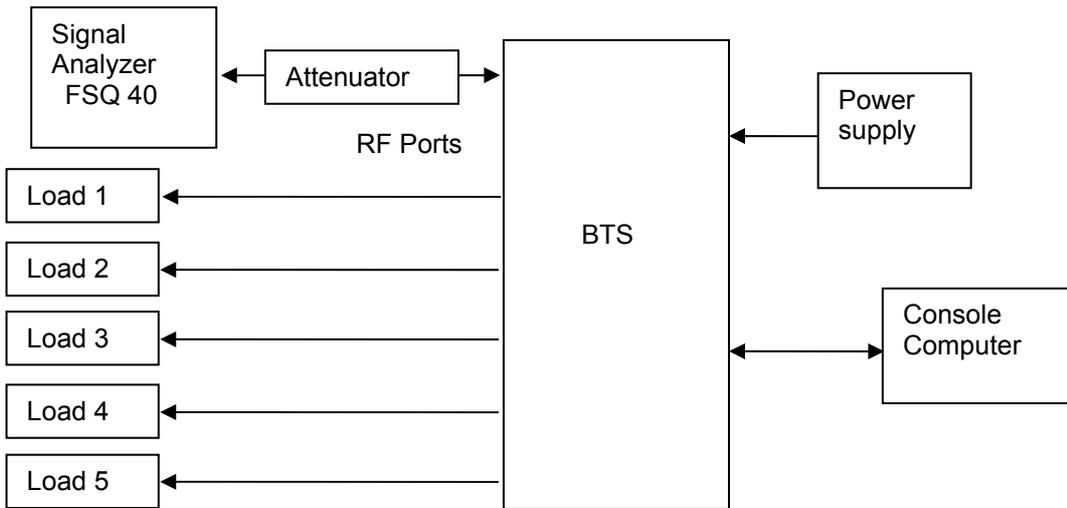

Figure 3. TEST SETUP

6.3.4 Measurement Results

CDMA2000 1X:

table 23. Measurement Results for 1X

TEST CONDITIONS		Occupied Bandwidth	
		Channel384 881.52MHz	
		Measured (MHz)	Limit (MHz)
T _{nom} (25 °C)	V _{nom} (-48 V)	1.2817	1.48

CDMA2000 1X EV-DO:

table 24. Measurement Results for 1X EV-DO

TEST CONDITIONS		Occupied Bandwidth	
		Channel384 881.52MHz	
		Measured (MHz)	Limit (MHz)
T _{nom} (25 °C)	V _{nom} (-48 V)	1.2788	1.48

6.3.5 Conclusion

The equipment **PASSED** the requirement of this clause.
For the measurement results refer to appendix B with 3 pages.

6.4 Band Edges Compliance

6.4.1 Test Conditions

table 25. Test Conditions

Preconditioning:	0.5 hour
Measured at:	Antenna connector
Ambient temperature:	23.5°C
Relative humidity:	55 %

6.4.2 Test Specifications and Limits

6.4.2.1 Specification

CFR 47 (FCC) part 2.1051 and part 22.913

6.4.2.2 Supporting Standards

table 26. Supporting Standards:

EIA/TIA-603-C: 2004	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
EIA/TIA-102-CAAA:1999	Digital C4FM/CQPSK Transceiver Measurement Methods (ANSI/TIA/EIA-102.CAAA-1999)
3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.4.2.3 Limits

Compliance with part 22.913, all spurious emission must be attenuated below the transmitter power by at least $43 + 10 \log_{10} P$. (Whereas P is the rated power of the EUT).

table 27. Limits

Rated Power:	43 dBm
Required attenuation:	$43 + 10 \log(20) = 56$, 43 dBm – 56 dB
Absolute level	- 13 dBm

6.4.3 Test Method and Setup

Base Station was connected to the wireless signal analyzer R&S FSQ40 via the one RF connector. Other RF connectors were connected to match load. The band class is set Band Class 0(800MHz). BTS was controlled to transmit Maximum power by console computer. Measure and record the Occupied Bandwidth of the Base Station by the R&S FSQ40.

RBW of 20kHz (more than 1% of 1.23MHz) was used up to 1MHz away from the band edge .So the FCC rules specify that RBW of 100kHz for measurements of emissions >1MHz away from the band edges for Band Class 0(800MHz).

Test Set-up

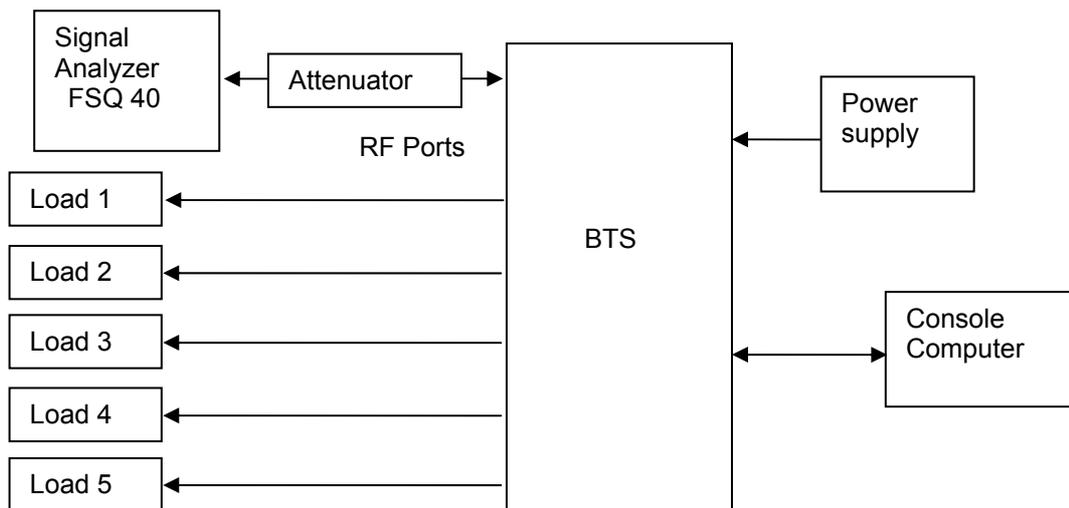

Figure 4. Test Set-up

6.4.4 Measurement Results

CDMA2000 1X:

A. Single Carrier

table 28. Measurement Results for single carrier

Channel Number	Frequency of Band edge [MHz]	Power [dBm]	Spurious Level measured [dBm]	FCC limit	Result
1018	869	43	<-13(See appendix C)	- 13 dBm	Pass
594	894	43	<-13(See appendix C)	- 13 dBm	Pass

594	894	43	<-13(See appendix C)	- 13 dBm	Pass

6.4.5 Conclusion

The equipment **PASSED** the requirement of this clause.
For the measurement results refer to appendix C with 13 pages.

6.5 Spurious Emission at Antenna Terminal

6.5.1 Test Conditions

table 31. Test Conditions

Preconditioning:	0.5 hour
Measured at:	Antenna connector
Ambient temperature:	20°C
Relative humidity:	50 %

6.5.2 Test Specifications and Limits

6.5.2.1 Specification

CFR 47 (FCC) part 2.1051 and part 22.917

6.5.2.2 Supporting Standards

table 32. Supporting Standards:

EIA/TIA-603-C: 2004	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
EIA/TIA-102-CAAA:1999	Digital C4FM/CQPSK Transceiver Measurement Methods (ANSI/TIA/EIA-102.CAAA-1999)
3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.5.2.3 Limits

Compliance with part 24.238, all spurious emission must be attenuated below the transmitter power by at least $43 + 10 \log_{10} P$. (Whereas P is the rated power of the EUT).

table 33. Limits

Rated Power:	43dBm
Required attenuation:	$43 + 10 \log(20) = 53$, 43 dBm – 56 dB
Absolute level	-13 dBm

6.5.3 Test Method and Setup

Base Station was connected to the wireless signal analyzer R&S FSQ40 via the one RF connector. Other RF connectors were connected to match load. The band class is set Band Class 0(800MHz). BTS was controlled to transmit Maximum power by console computer. Measure and record the Occupied Bandwidth of the Base Station by the R&S FSQ40.

According to 47CFR part 22.917, this defined the measurement bandwidth of as following:
 Measurement bandwidth (RBW) for 9 kHz up to 3GHz: 100kHz;
 Measurement bandwidth (RBW) for 3GHz up to 12.75GHz: 100kHz;

Test Set-up

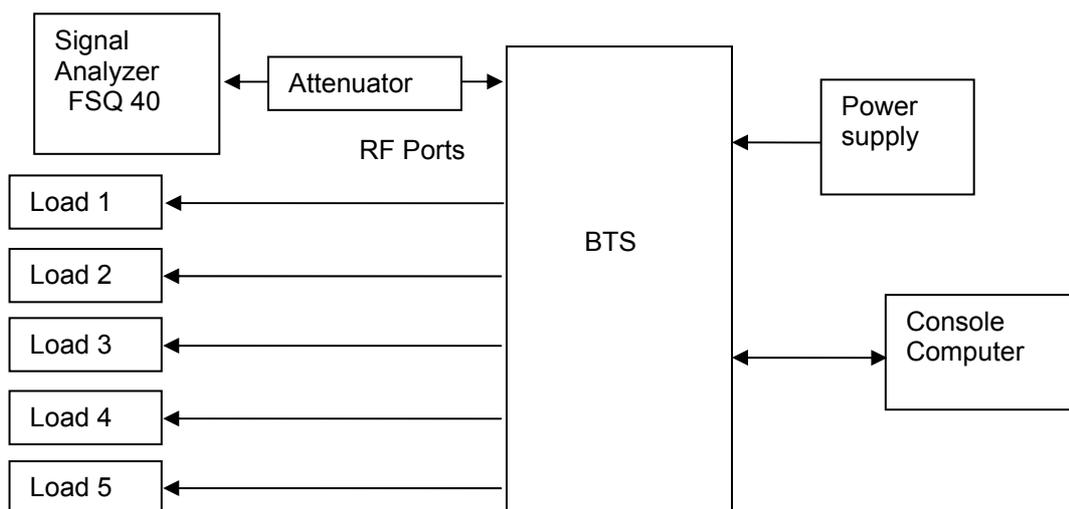

Figure 5. Test Set-up

6.5.4 Measurement Results

CDMA2000 1X:

A. Single Carrier

table 34. Measurement Results for single carrier

Channel Number	Test Range (Frequency)	Power [dBm]	Spurious Level measured [dBm]	FCC limit	Result
1018	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix D)	- 13 dBm/100kHz	Pass
594	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix D)	- 13 dBm/100kHz	Pass

B. Multiple Carriers

table 35. Measurement Results for multiple carriers

Channel Number	Test Range (Frequency)	Power [dBm]	Spurious Level measured [dBm]	FCC limit	Result
1018/36/77	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix D)	- 13 dBm/100kHz	Pass
512/553/594	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix D)	- 13 dBm/100kHz	Pass

CDMA2000 1X EV-DO:

table 36. Measurement Results for EV-DO

Channel Number	Test Range (Frequency)	Power [dBm]	Spurious Level measured [dBm]	FCC limit	Result
1018	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix D)	- 13 dBm/100kHz	Pass
594	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix D)	- 13 dBm/100kHz	Pass

6.5.5 Conclusion

The equipment **PASSED** the requirement of this clause.
For the measurement results refer to appendix D with 13 pages.

6.6 Radiated Spurious Emission

6.6.1 Test Conditions

table 37. Test Conditions

Preconditioning:	0.5 hour
Measured at:	enclosure
Ambient temperature:	22 °C
Relative humidity:	53 %

6.6.2 Test Specifications and Limits

6.6.2.1 Specification

CFR 47 (FCC) part 2.1053 and part 22.917

6.6.2.2 Supporting Standards

table 38. Supporting Standards:

EIA/TIA-603-C: 2004	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
EIA/TIA-102-CAAA:1999	Digital C4FM/CQPSK Transceiver Measurement Methods (ANSI/TIA/EIA-102.CAAA-1999)
3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.6.2.3 Limits

Compliance with part 22.917, all spurious emission must be attenuated below the transmitter power by at least $43 + 10 \log_{10} P$. (Whereas P is the rated power of the EUT).

table 39. Limits

Rated Power:	43dBm
Required attenuation:	$43 + 10 \log(20) = 56$, 43 dBm – 56 dB
Absolute level	- 13 dBm

6.6.3 Test Method and Setup

(a) Measurements were made to detect spurious emissions radiated directly from the cabinet, control circuits, power leads, or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data were supplied showing the magnitude of each harmonic and other spurious emission. For this test, single sideband, independent sideband, and controlled carrier transmitters shall be modulated under the conditions specified in paragraph 2.1049(c) as appropriate. For equipment operating on frequencies below 890 MHz, an Open Field Test is normally required with the measuring instrument antenna located in the far field at all test frequencies. In the event it is either impractical or impossible to make open field measurements (e.g. a broadcast transmitter installed in a building) measurement will be accepted of the equipment as installed. Such measurements must be accompanied by a description of the site where the measurements were made showing the location of any possible source of reflections, which might distort the field strength measurements. Information submitted shall include the relative radiated power of each spurious emission with the reference to the

rated power output of the transmitter, assuming all emissions are radiated from half-wave dipole antennas.

(b) Measurements specified in paragraph (a) of this section shall be made for the following equipment:

- (1) Those in which the spurious emission are required to be 60 dB or more below the mean power of the transmitter.
- (2) All equipment operating on frequencies higher than 25 MHz
- (3) All equipment where the antenna is an integral part of, and attached directly to the transmitter.
- (4) Other types of equipment as required, when deemed necessary by the Commission.

HUAWEI CDMA2000 800MHz Base Station BTS3606E is equipment with non-integral antenna. And it should test according to part (b) of above section.

BTS is connected to match loads. The console computer controls the CDMA2000 800MHz Base Station BTS3606E to transmitter the maximum power which defined in specification of product. The Base Station operates on a typical channel.

The test procedure:

- (a) For transmitters other than single sideband, independent sideband and controlled carrier radiotelephone, E.R.P. shall be measured when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on the circuit elements specified in 2.1033(c)(8). HUAWEI CDMA2000 800MHz Base Station BTS3606E was connected to ancillary in order to simulate normal operating conditions with reference to the guidance given in the standard for this type of equipment.
- (b) Test the radiated maximum output power by the R&S test receiver ESMI received from test antenna.
- (c) Use substitution method to verify the Maximum output power. The EUT is substituted by a dipole antenna. The dipole is connected to a signal generator. And then adjust the output level of the signal generator to get the same received power recorded in step (b) on ESMI, and record the power level of Signal Generator. Of course, the cable loss at the test frequency should be compensated.

According to part 22.917, the defined measurement bandwidth as following:

22.917(b) Measurement procedure: Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater.

Measurement bandwidth (RBW) for 9 kHz up to 1GHz: 100kHz;

Measurement bandwidth (RBW) for 1GHz up to 12.75GHz: 100kHz;

Test setup

Step 1: Pre-test

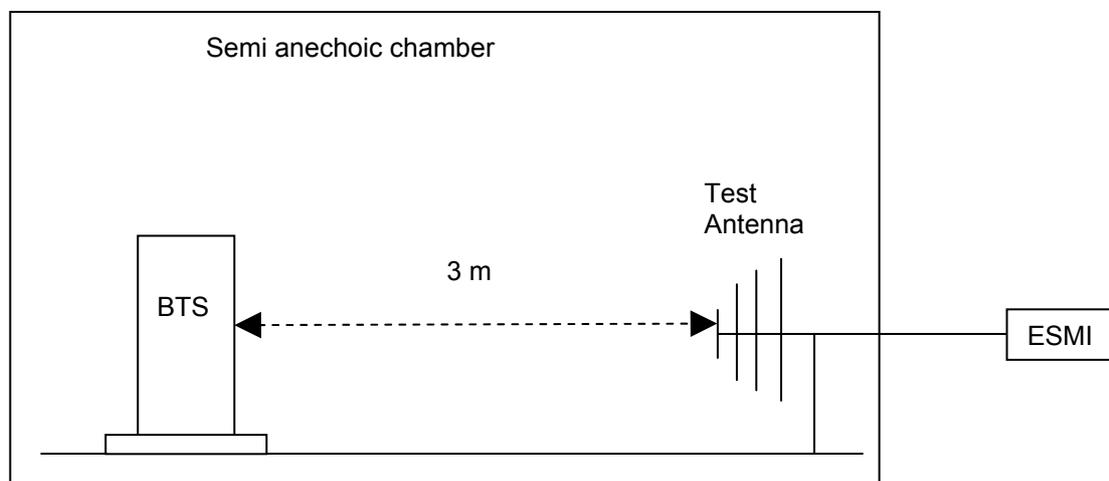

Figure 6. Test Set-up

Step 2: Substitution method to verify the maximum ERP

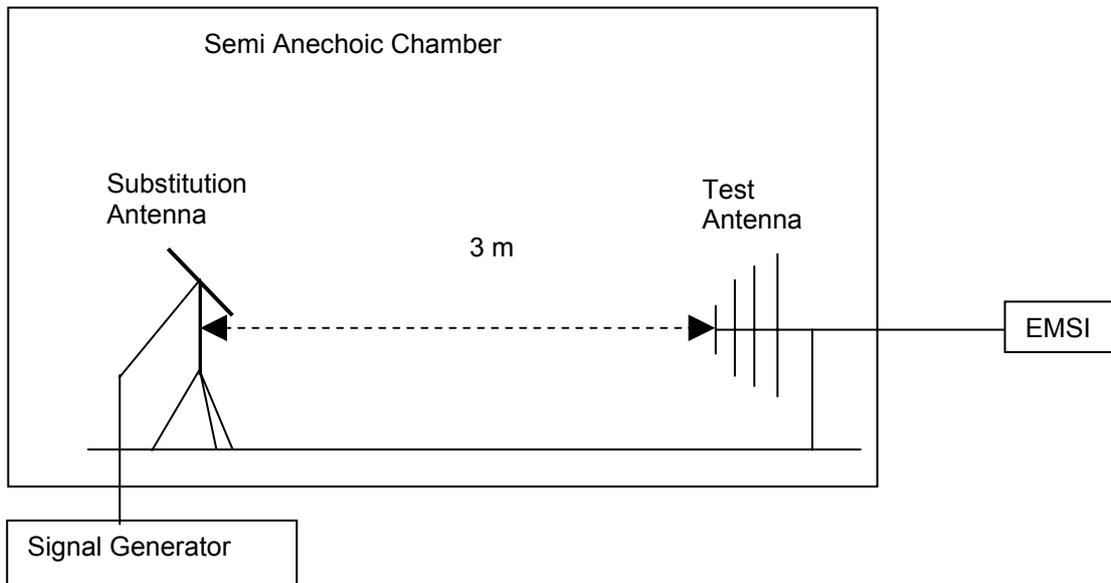

Figure 7. Test Set-up

NOTE: Effective radiated power (ERP) refers to the radiation power output of the EUT, assuming all emissions are radiated from half-wave dipole antennas.

6.6.4 Measurement Results

6.6.4.1 Pre-test Measurement Results

table 40. Measurement Result

Channel Number	Test Range (Frequency)	Power [dBm]	Spurious Level measured [dBm]	FCC limit	Result
Channel384 881.52MHz	9 kHz ~12.75GHz	43	<- 13 dBm (See appendix E)	- 13 dBm	Pass

6.6.4.2 Substitution Results

table 41. Substitution Results

Freq. [MHz]	Measurement Value [dBm]	Substitution Antenna Type	Gain [dBd]	Cable Loss [dB]	Signal Generator Level [dBm]	Substitution Level [dBm]	FCC limit [dBm]	Result
3923.33	-37.93	Horn Ant.	6.05	2.20	-41.24	-37.39	-13	Pass

Note: For get the EIRP. (Efficient Radiated Power) in substitution method, the following formula should take to calculate it,

$$\text{ERP [dBm]} = \text{SGP [dBm]} - \text{Cable Loss [dB]} + \text{Gain [dBd]}$$

NOTE: SGP- Signal Generator Level

6.6.5 Conclusion

The equipment **PASSED** the requirement of this clause.
For the measurement results refer to appendix E with 4 pages.

6.7 Frequency Stability

6.7.1 Test Conditions

table 42. Test Conditions

Preconditioning:	0.5 hour
Measured at:	Antenna connector
Ambient temperature:	See below
Relative humidity:	55 % at 20 °C

6.7.2 Test Specifications and Limits

6.7.2.1 Specification

CFR 47 (FCC) part 2.1055 and part 22.917

6.7.2.2 Supporting Standards

table 43. Supporting Standards:

ANSI C63.4-1992	Methods of Measurement of Radio-Noise Emissions from Low Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz
EIA/TIA-603-C: 2004	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
3GPP2 C.S0010-B	Recommended Minimum Performance Standards for cdma2000 Spread Spectrum Base Stations. Release B

6.7.2.3 Limits

No specific frequency stability requirement in part 2.1055 and part 22.917.

6.7.3 Test Method and Setup

The frequency stability shall be measured with variation of ambient temperature as follows:

- (1) From -30° to $+50^{\circ}$ centigrade for all equipment except that specified in subparagraphs (2) and (3) of paragraph 2.1055

(b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. The short-term transient effects on the frequency of the transmitter due to keying (except for broadcast transmitters) and any heating element cycling normally occurring at each ambient temperature level also shall be shown. Only the portion or portions of the transmitter containing the frequency determining and stabilizing circuitry need be subjected to the temperature variation test.

(d) The frequency stability shall be measured with variation of primary supply voltage as follows:

- (1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.
- (2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point, which shall be specified by the manufacturer.
- (3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided. Effects on frequency of transmitter keying (except for broadcast transmitters) and any heating element cycling at the nominal supply

voltage and at each extreme also shall be shown.

(e) When deemed necessary, the Commission may require tests of frequency stability under conditions in addition to those specifically set out in paragraphs (a), (b), (c) and (d) of this section. (For example, measurements showing the effect of proximity to large metal objects, or of various types of antennas, may be required for portable equipment.)

Test Set up

Connect the Base Station to the Wireless Signal Analyzer R&S FSQ40 via the antenna connector. Then measure the frequency error by the R&S FSQ40. The Other antenna output ports were matched with 50 Ω match loads.

6.7.5 Conclusion

The equipment **PASSED** the requirement of this clause.
For the measurement results refer to appendix F with 25 pages.

7 EMC Test

7.1 Radiated Emission of Enclosure in Idle Mode

7.1.1 Test Conditions

table 44. Test Conditions

Preconditioning:	0.5 hour
Measured at:	enclosure
Ambient temperature:	25 °C
Relative humidity:	51 %

7.1.2 Test Specifications and Limits

7.1.2.1 Specification

CFR 47 (FCC) part 15.109

7.1.2.2 Supporting Standards

table 45. Supporting Standards:

ANSI C63.4: 2003	Methods of Measurement of Radio-Noise Emissions from Low Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz
------------------	--

7.1.2.3 Limits

The Radiated Emission of enclosure of EUT should compliance with the requirement of part 15.109. The limit showed in following table.

table 46. Limits

Frequency of Emission (MHz)	Radiated Limit	
	Unit(uV/m)	Unit(dBuV/m)
30-88	100	40
88-216	150	43.5
216-960	200	46
960-1000	500	54

7.1.3 Test Method and Setup

The test site semi-anechoic chamber has met the requirement of NSA tolerance 4dB according to the standards: ANSI C63.4 (2003). The test distance was 3m. The EUT was set-up on insulator 80cm above the Ground Plane. The set-up and test methods were according to EN 55022/CISPR 22

The Radiated Disturbance measurements were made using a Rohde and Schwarz ESMI Test Receiver and control software ES-K1.

A preliminary scan and a final scan of the emissions were made from 30 MHz to 1GHz by using test script of software; the emissions were measured using a Quasi-Peak Detector. The maximal emission

value was acquired by adjusting the antenna height, polarisation and turntable azimuth in accordance with the software setup. Normally, the height range of antenna was 1m to 4m, the azimuth range of turntable was 0° to 360°, The receive antenna has two polarizations V and H.

The test was performed in one power supply mode: DC power supply, and the test performed at worst emission state.

All RF ports of CDMA2000 800MHz Base Station BTS3606E were terminated with match load. And the Base Station was operated on the typical channel. The transceivers of Base Station were worked in idle mode.

Measurement bandwidth: 30 MHz – 1000 MHz: 120 kHz

Measurement bandwidth: 1GHz – 12.75 GHz: 1 MHz

Test set up

7.1.5 Conclusion

The equipment **PASSED** the requirement of this clause.
For the measurement results refer to appendix G with 2 pages.

8 System Measurement Uncertainty

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 as following:

table 49. System Measurement Uncertainty

Items		Extended Uncertainty
Band Width	Magnitude (%)	U=0.2%; k=2
Band Edge Compliance	Disturbance Power (dBm)	U=2.0dB; k=2
Conducted Spurious Emission at Antenna Terminal	Disturbance Power (dBm)	U=2.0dB; k=2
Frequency Stability	Frequency Accuracy(ppm)	U=0.21ppm; k=2
Field Strength of Spurious Radiation	ERP (dBm)(30MHz~1G)	U=4.6dB; k=2
	ERP (dBm) (>1G)	U=3dB; k=2
Conducted Output Power	Power(dBm)	U=0.39dB; k=2
Conducted Emission at Power Port	Disturbance Voltage (dB μ V)	U=3.3dB; k=2
Radiated Emission of enclosure at ideal mode	Field strength (dB μ V/m)	U=4.6dB; k=2
