The image shows a screenshot of an Agilent Spectrum Analyzer in Swept SA mode. The main display is a log-scale plot of power spectral density. The horizontal axis represents frequency, centered at 1.850000 GHz with a 2.000 MHz span. The vertical axis represents power in dBm, ranging from -60.0 to 20.0 dBm. A yellow trace shows a relatively flat noise floor at approximately -40.0 dBm. A green horizontal line is drawn at -13.00 dBm. A green marker '1' is placed on the trace at the center frequency. The right side of the screen contains a control panel with various settings: Frequency (1.850000000 GHz), Auto Tune, Center Freq (1.850000000 GHz), Start Freq (1.849000000 GHz), Stop Freq (1.851000000 GHz), CF Step (200.000 kHz, Auto), and Freq Offset (0 Hz). The top status bar shows the center frequency, reference offset, and other parameters like PNO: Wide, IFGain: Low, Trig: Free Run, and #Atten: 36 dB.

6Appendix_F: Spurious Emission at Antenna Terminal

NOTE: For the averaged unwanted emissions measurements, the measurement points in each sweep is greater than twice the Span/RBW in order to ensure bin-to-bin spacing of $< RBW/2$ so that narrowband signals are not lost between frequency bins. As to the present test item, the "Measurement Points = $k * (Span / RBW)$ " with k between 4 and 5, which results in an acceptable level error of less than 0.5 dB.
