The Swiss Accreditation Service is one of the signatories to the EA
Multilateral Agreement for the recognition of calibration certificates

Accreditation No.: **SCS 108**

Client **Huawei-SZ (Auden)**

Certificate No: **AM1DV3-3126_Aug14**

CALIBRATION CERTIFICATE

Object **AM1DV3 - SN: 3126**

Calibration procedure(s) **QA CAL-24.v3**
Calibration procedure for AM1D magnetic field probes and TMFS in the audio range

Calibration date: **August 08, 2014**

This calibration certificate documents the traceability to national standards, which realize the physical units of measurements (SI).
The measurements and the uncertainties with confidence probability are given on the following pages and are part of the certificate.

All calibrations have been conducted in the closed laboratory facility: environment temperature $(22 \pm 3)^{\circ}\text{C}$ and humidity $< 70\%$.

Calibration Equipment used (M&TE critical for calibration)

Primary Standards	ID #	Cal Date (Certificate No.)	Scheduled Calibration
Keithley Multimeter Type 2001	SN: 0810278	01-Oct-13 (No:13976)	Oct-14
Reference Probe AM1DV2	SN: 1008	14-Jan-14 (No. AM1D-1008_Jan14)	Jan-15

Certificate of conformity

Item	Audio Magnetic 1D Field Probe AM1DV2, AM1DV3
Type No	SP AM1 001 A, SP AM1 001 B
Series No	1001ff, 3000 ff
Manufacturer / Origin	Schmid & Partner Engineering AG Zeughausstrasse 43, CH-8004 Zürich, Switzerland

Description of the item

AM1DVx is a fully RF shielded magnetic field probe for the frequency range from 100 Hz to 20 kHz which can be used in the close vicinity of RF emitting devices according to [1] without additional shielding. Its sensor coil is compliant with the dimensional requirements of [1] and allows measurement of 3 orthogonal field components by rotating the probe around its axis in a tilted arrangement according to [2]. The signal from the pickup coil is amplified in a symmetric low noise amplifier with a gain of 40 dB (V2) or 20 dB (V3) and a 3 dB decay at approx. 60 kHz. A 3 pin connector at the side provides the output signal to a shielded cable and allows power supply (monitored via LED).

Handling of the item

The probe is designed for operation in air (shall not be exposed to humidity of liquids). In order to keep the performance and alignment, the probe must not be disassembled. The full performance is achieved by using the SPEAG provided accessories (shielded cable and probe beaker) in conjunction with the Audio Magnetic Measurement Instrument AMMI with 48V phantom supply and following manual [2].

Tests

Test	Requirement	Details	Units tested
Dimensions	according to corresponding probe certificate	verified at delivery / light beam alignment prior to usage	samples
Connector rotation angle	probe configuration data for alignment of the sensor in the field	probe tilted 35.3° above measurement plane	all
Sensor angle	probe configuration data for alignment with the field	probe tilted 35.3° above measurement plane	all
Frequency response	within +/- 0.5 dB of ideal differentiator	100 Hz to 10 kHz	samples
Noise level	V2: ABM2 typ. -69 dB A/m V3: ABM2 typ. -62 dB A/m	with AMMI, magnetically shielded tip	all
Max. signal	V2: ABM1 < 20 dB A/m @ 1 kHz V3: ABM1 < 40 dB A/m @ 1 kHz	with AMMI	all
Linearity	within < 0.1 dB from 5 dB below limitation to 16 dB above noise level	with AMMI	samples
Sensitivity	V2: typ. 0.066 V / (A/m) V3: typ. 0.0073 V / (A/m)	at 1 kHz	all
RF shielding	immunity to AM modulated RF signal	1880 MHz, 1 kHz 80% AM, 2W, with cable connected	all

Description of the AM1D probe

The AM1D Audio Magnetic Field Probe is a fully shielded magnetic field probe for the frequency range from 100 Hz to 20 kHz. The pickup coil is compliant with the dimensional requirements of [1+2]. The probe includes a symmetric low noise amplifier for the signal available at the shielded 3 pin connector at the side. Power is supplied via the same connector (phantom power supply) and monitored via the LED near the connector. The 7 pin connector at the end of the probe does not carry any signals, but determines the angle of the sensor when mounted on the DAE. The probe supports mechanical detection of the surface.

The single sensor in the probe is arranged in a tilt angle allowing measurement of 3 orthogonal field components when rotating the probe by 120° around its axis. It is aligned with the perpendicular component of the field, if the probe axis is tilted nominally 35.3° above the measurement plane, using the connector rotation and sensor angle stated below.

The probe is fully RF shielded when operated with the matching signal cable (shielded) and allows measurement of audio magnetic fields in the close vicinity of RF emitting wireless devices according to [1+2] without additional shielding.

Handling of the item

The probe is manufactured from stainless steel. In order to maintain the performance and calibration of the probe, it must not be opened. The probe is designed for operation in air and shall not be exposed to humidity or liquids. For proper operation of the surface detection and emergency stop functions in a DASY system, the probe must be operated with the special probe cup provided (larger diameter).

Methods Applied and Interpretation of Parameters

- *Coordinate System:* The AM1D probe is mounted in the DASY system for operation with a HAC Test Arch phantom with AMCC Helmholtz calibration coil according to [3], with the tip pointing to "southwest" orientation.
- *Functional Test:* The functional test preceding calibration includes test of Noise level
RF immunity (1kHz AM modulated signal). The shield of the probe cable must be well connected. Frequency response verification from 100 Hz to 10 kHz.
- *Connector Rotation:* The connector at the end of the probe does not carry any signals and is used for fixation to the DAE only. The probe is operated in the center of the AMCC Helmholtz coil using a 1 kHz magnetic field signal. Its angle is determined from the two minima at nominally +120° and -120° rotation, so the sensor in the tip of the probe is aligned to the vertical plane in z-direction, corresponding to the field maximum in the AMCC Helmholtz calibration coil.
- *Sensor Angle:* The sensor tilting in the vertical plane from the ideal vertical direction is determined from the two minima at nominally +120° and -120°. DASY system uses this angle to align the sensor for radial measurements to the x and y axis in the horizontal plane.

Sensitivity: With the probe sensor aligned to the z-field in the AMCC, the output of the probe is compared to the magnetic field in the AMCC at 1 kHz. The field in the AMCC Helmholtz coil is given by the geometry and the current through the coil, which is monitored on the precision shunt resistor of the coil.

AM1D probe identification and configuration data

Item	AM1DV3 Audio Magnetic 1D Field Probe
Type No	SP AM1 001 BB
Serial No	3126

Overall length	296 mm
Tip diameter	6.0 mm (at the tip)
Sensor offset	3.0 mm (centre of sensor from tip)
Internal Amplifier	20 dB

Manufacturer / Origin	Schmid & Partner Engineering AG, Zürich, Switzerland
Manufacturing date	April 26, 2012
Last calibration date	n.a.

Calibration data

Connector rotation angle	(in DASY system)	162.8 °	+/- 3.6 ° (k=2)
Sensor angle	(in DASY system)	0.14 °	+/- 0.5 ° (k=2)
Sensitivity at 1 kHz	(in DASY system)	0.00788 V / (A/m)	+/- 2.2 % (k=2)

The reported uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%.
