

Declaration of Electromagnetic Field Health Compliance

To whom it may concern,

As to the product **pRU01-B04** made by Huawei Technologies Co., Ltd., we declare that it complies with the Basic restrictions/Reference levels for electric, magnetic and electromagnetic fields as specified in following standards(s):

Nr.	Standard
1	47CFR FCC Part 1 (10-1-13 Edition)
2	RSS-102 (Issue4, March 2010)

The compliance is demonstrated based on the following calculation model assessment:

1. The power density according to far-field model is:

$$S = \frac{P \times G_{(\theta, \phi)}}{4 \times \pi \times R^2}$$

Where:

P = input power of the antenna.

G = antenna gain relative to an isotropic antenna.

θ, ϕ = elevation and azimuth angles.

R = distance from the antenna to the point of investigation.

2. For single or multiple RF sources, the calculated power density should comply with following:

$$\sum_i \frac{S_i}{S_{Limit,i}} \leq 1$$

Where:

S_i = the power density when the f is i .

$S_{Limit,i}$ = the reference level requirement for power density when f is i .

3. The calculation of the power density or safe distance is:

NOTE 1: The RF exposure evaluation is base on the far-field and the radiation exposure is over-estimated.

NOTE 2: The maximum output power level is taken into account as a worst case for the purpose of the calculation of power density or safe distance.

NOTE 3: The minimum antenna feed cable loss (assumed no cable loss) is taken into account as a worst case for the purpose of the calculation of power density or safe distance.

NOTE 4: The maximum antenna radiation exposure orientation and maximum antenna gain is taken into account as a worst case for the purpose of the calculation of power density or safe distance.

AWS Band:

RF Source	Calculation
RF Source #1	f = 2110 to 2155 MHz
	$S_{Limit,i}$ = 10 W/m ²
	P = 0.316 W (=25 dBm) (rated power: 23dBm, tolerance: +/-2dB)
	$G_{(\theta,\phi)}$ = 2.51 (= 4 dBi) (Integrated antenna)
	$EIRP = P \times G_{(\theta,\phi)}$ = 0.79316 W
	θ, ϕ = The worst condition is considered, i.e. the max G is used.
	R \geq 0.25 m
	S_i \leq $\frac{P \times G_{(\theta,\phi)}}{4 \times \pi \times R^2} = 1.01$ W/m ²
	$\frac{S_i}{S_{Limit,i}}$ \leq 0.101

RF Source	Calculation
RF Source #1	f = 2110 to 2155 MHz
	$S_{Limit,i}$ = 10 W/m ²
	P = 0.316 W (=25 dBm) (rated power: 23dBm, tolerance: +/-2dB)
	$G_{(\theta,\phi)}$ = 11.22 (= 10.5 dBi) (External antenna)
	$EIRP = P \times G_{(\theta,\phi)}$ = 3.54552 W
	θ, ϕ = The worst condition is considered, i.e. the max G is used.
	R \geq 0.25 m
	S_i \leq $\frac{P \times G_{(\theta,\phi)}}{4 \times \pi \times R^2} = 4.51$ W/m ²
	$\frac{S_i}{S_{Limit,i}}$ \leq 0.451

Integrated antenna:

AWS Band	$\sum_i \frac{S_i}{S_{Limit,i}} \leq 0.101$ (Less than 1, so complied)
----------	--

External antenna:

AWS Band	$\sum_i \frac{S_i}{S_{Limit,i}} \leq 0.451$ (Less than 1, so complied)
----------	--

Calculated safe distance: 0.25 m
