SAR Compliance Test Report

Test report no.:	02-RF-0223	Date of report:	13th August, 2003
Number of pages:	49	Contact person:	Nerina Walton
		Responsible test engineer:	Nerina Walton

Testing laboratory:	Test & Certification Center (TCC) Dallas Nokia Mobile Phones, Inc 6021 Connection Drive Irving TX 75039, USA Tel. +1 972 894 5000 Fax. +1 972 894 4988	Client:	Nokia San Diego 12278 Scripps Summit Drive San Diego CA, 92131, USA Tel. +1 858 831 5000 Fax. +1 858 831 6500

Tested devices:

QMNRH-27, Model 6225
BLD-3, HDB-4, HS-1C and HDK-1K

Testing has been carried out in accordance with:

IEEE Std 1528-200X, Draft CBD 1.0 – April 4, 2002
    Draft Recommended Practice for Determining the Peak Spatial-Average Specific Absorption Rate (SAR) in the Human Body Due to Wireless Communications Devices: Experimental Techniques
FCC Supplement C Edition, 01-01
    Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields

Documentation:

The documentation of the testing performed on the tested devices is archived for 15 years at Test & Certification Center (TCC) Dallas

Test results:

The tested device complies with the requirements in respect of all parameters subject to the test.

The test results and statements relate only to the items tested. The test report shall not be reproduced except in full, without written approval of the laboratory.

1. QUALITY SYSTEM

The quality system in place for TCC-Dallas conforms to ISO/IEC 17025 and has been audited to the standard by A2LA (American Association of Laboratory Accreditation). Appendix D of this report contains the scope of accreditation for A2LA. TCC – Dallas has also been audited using the ISO 9000 Quality System, as part of Nokia Mobile Phones, Inc., by ABS (American Bureau of Shipping) Quality Evaluations Inc.

TCC-Dallas is a recognized laboratory with the Federal Communications Commission in filing applications for Certification under Parts 15 and 18, Registration Number 100060, and Industry Canada, Registration Number IC 661.

2.   SUMMARY FOR SAR TEST REPORT

Date of test	12 May - 17 July 2003
Contact person	Nerina Walton
Test plan referred to	-
FCC ID	QMNRH-27
Type, SN, HW and SW numbers of tested device	Type: RH-27, ESN: 072/01987159, HW: 2506f, SW: V H100-03w10-01.nbr
Accessories used in testing	BLD-3 (3.7v Rechargeable Li-Ion) Battery, HDB-4, HS-1C and HDK-1K Headsets
Notes	-
Document code	02-RF-0223
Responsible test engineer	N. Walton
Measurement performed by	E. Parish / J. Love / M. Sundstrom / C. Bertz

2.1   Maximum Results Found during SAR Evaluation

The equipment is deemed to fulfill the requirements if the measured values are less than or equal to the limit.

2.1.1   Head Configuration

Mode	Ch / f (MHz)	Power (dBm)[1]	Position	Limit (mW/g)	Measured (mW/g)	Result
AMPS	384 / 836.52	27.129	Right Touch Position	1.6	0.99	PASSED
CDMA 800	384 / 836.52	26.233	Left Touch Position	1.6	0.86	PASSED
CDMA 1900	600 / 1880.00	26.351	Left Tilt Position	1.6	1.12	PASSED

Note 1: PCTEST Engineering Laboratory Inc, performed the power measurements (EDRP and EIRP).

2.1.2   Body Worn Configuration

Mode	Ch / f (MHz)	Power (dBm)[1]	Position	Limit (mW/g)	Measured (mW/g)	Result
AMPS	384 / 836.52	27.129	Flat – Back of Phone with 22mm Measurement Distance	1.6	0.97	PASSED
CDMA 800	1013 / 824.70	26.273	Flat – Back of Phone with 22mm Measurement Distance	1.6	0.79	PASSED
CDMA 1900	600 / 1880.00	26.351	Flat – Back of Phone with 22mm Measurement Distance	1.6	0.54	PASSED

Note 1: PCTEST Engineering Laboratory Inc, performed the power measurements (EDRP and EIRP).

2.1.3   Measurement Uncertainty

Combined Standard Uncertainty	**±14.5**
Expanded Standard Uncertainty (k=2)	**±29.1**

3. DESCRIPTION OF TESTED DEVICE

Device category	Portable device		
Exposure environment	Uncontrolled exposure		
Unit type	Prototype unit		
Case type	Fixed case		
Mode of Operation	AMPS	CDMA 800	CDMA 1900
Maximum Device Rating	Power Class III	Power Class III	Power Class II
Modulation Mode	Frequency Modulation (FM)	Quadrature Phase Shift Keying	Quadrature Phase Shift Keying
Duty Cycle	1	1	1
Transmitter Frequency Range (MHz)	824.04 - 848.97	824.70 - 848.31	1851.25 – 1908.75

3.1 Picture of Phone

The tested device, QMNRH-27 is shown below: -

3.2 Description of the Antenna

Type	Internal integrated antenna
Location	Inside the back cover, near the top of the device

3.3 Battery Options

There is only one battery available for the tested device, a rechargeable Li-ion battery, BLD-3.

3.4 Body Worn Operation

Body SAR was evaluated with a separation distance of 22mm and with the HDB-4, HS-1C and HDK-1K headsets connected.

4. TEST CONDITIONS

4.1 Ambient Conditions

Ambient temperature (°C)	22±2
Tissue simulating liquid temperature (°C)	20±2
Humidity (%)	43

4.2 RF characteristics of the test site

Tests were performed in a fully enclosed RF shielded environment.

4.3 Test Signal, Frequencies, and Output Power

The device was controlled by using a radio tester. Communication between the device and the tester was established by air link.

Measurements were performed on the lowest, middle and highest channels of the operating band.

The phone was set to maximum power level during all tests and at the beginning of each test the battery was fully charged.

The DASY3 system measures power drift during SAR testing by comparing e-field in the same location at the beginning and at the end of measurement. These records were used to monitor stability of power output.

5.1 System Accuracy Verification

The manufacturer calibrates the probes annually. Dielectric parameters of the simulating liquids are measured using an Agilent 85070C dielectric probe kit and an HP 8720D network analyzer.

SAR measurements of the tested device were performed within 24 hours of system accuracy verification, which was done using the dipole validation kit.

The dipole antenna's, which are manufactured by Schmid & Partner Engineering AG, are matched to be used near a flat phantom filled with tissue simulating solution. Length of the 835 MHz dipole is 161mm with an overall height of 330mm; length of the 900MHz dipole is 149mm with an overall height of 300mm; length of the 1900MHz dipole is 68mm with an overall height of 300mm. A specific distance holder is used in the positioning to ensure correct spacing between the phantom and the dipole.

A power level of 250 mW was supplied to the dipole antenna placed under the flat section of the SAM phantom. Validation results are in the table below and a print out of the validation tests are presented in Appendix B. All the measured parameters were within specification.

5.1.1 Head Tissue

Tissue	f (MHz)	Description (Date Measured)	SAR (W/kg), 1g	Dielectric Parameters ε_r	σ (S/m)	Temp (°C)
Head	900	20-May-03	10.5	41.9	0.97	20.0
		22-May-03	10.6	41.7	0.97	20.2

5.2 **Tissue Simulants**

All dielectric parameters of tissue simulants were measured within 24 hours of SAR measurements. The depth of the tissue simulant in the ear reference point of the phantom was 15cm ± 5mm during all tests. Volume for each tissue simulant was 27 litres.

5.2.1 Head Tissue Simulant

The composition of the brain tissue simulating liquid for 835 MHz is: -
51.07%   De-Ionized Water
47.31%   Sugar
1.15%   Salt
0.23%   HEC
0.24%   Bactericide

f (MHz)	Description (Date Measured)	Dielectric Parameters		Temp (°C)
		ε_r	σ (S/m)	
836.52	20-May-03	42.6	0.92	20.0
	22-May-03	42.4	0.91	20.2
	25-May-03	42.9	0.91	20.1
	27-May-03	41.6	0.90	20.7
	30-May-03	41.6	0.90	21.1
	Recommended Values	41.5	0.90	N/A

The composition of the brain tissue simulating liquid for 1900 MHz is: -
44.91%   2-(2-butoxyethoxy) Ethanol
54.88%   De-Ionized Water
0.21%   Salt

f (MHz)	Description	Dielectric Parameters		Temp (°C)
		ε_r	σ (S/m)	
1880	12-May-03	38.8	1.43	19.2
	13-May-03	38.4	1.40	20.7
	14-May-03	38.6	1.44	20.7
	Recommended Values	40.0	1.40	N/A

Recommended values are adopted from OET Bulletin 65 (97-01) Supplement C (01-01).

5.2.2   Muscle Tissue Simulant

The composition of the muscle tissue simulating liquid for 835 MHz is: –
65.45%   De-Ionized Water
34.31%   Sugar
0.62%   Salt
0.10%   Bactericide

f (MHz)	Description (Date Measured)	Dielectric Parameters		Temp (°C)
		ε_r	σ (S/m)	
836.52	16-July-03	55.0	0.96	21.7
	17-July-03	54.8	0.97	21.5
	Recommended Values	55.2	0.97	N/A

The composition of the muscle tissue simulating liquid for 1900 MHz is: –
69.02%   De-Ionized Water
30.76%   Diethylene Glycol Monobutyl Ether
0.22%   Salt

f (MHz)	Description	Dielectric Parameters		Temp (°C)
		ε_r	σ (S/m)	
1880	15-May-03	51.9	1.53	20.2
	02-June-03	52.3	1.53	19.4
	Recommended Values	53.3	1.52	N/A

Recommended values are adopted from OET Bulletin 65 (97-01) Supplement C (01-01).

5.3 Phantoms

"SAM v4.0" phantom", manufactured by SPEAG, was used during the measurement. It has a fiberglass shell integrated into a wooden table. The shape of the shell corresponds to the phantom defined by SCC34-SC2. It enables the dosimetric evaluation of left and right hand phone usage as well as body mounted usage at the flat phantom region. Reference markings on the phantom allow the complete set-up of all predefined phantom positions and measurement grids by manually teaching three points in the robot.

The thickness of phantom shell is 2 mm except for the ear, where an integrated ear spacer provides a 6 mm spacing from the tissue boundary. Manufacturer reports tolerance in shell thickness to be ±0.1mm.

5.4 Isotropic E-Field Probe ET3DV6

Construction	Symmetrical design with triangular core Built-in optical fiber for surface detection system Built-in shielding against static charges PEEK enclosure material (resistant to organic solvents, e.g., glycol ether)
Calibration	Calibration certificate in Appendix D
Frequency	10 MHz to 3 GHz (dosimetry); Linearity: ± 0.2 dB (30 MHz to 3 GHz)
Optical Surface Detection	± 0.2 mm repeatability in air and clear liquids over diffuse reflecting surfaces
Directivity	± 0.2 dB in HSL (rotation around probe axis) ± 0.4 dB in HSL (rotation normal to probe axis)
Dynamic Range	5 µW/g to > 100 mW/g; Linearity: ± 0.2 dB
Dimensions	Overall length: 330 mm Tip length: 16 mm Body diameter: 12 mm Tip diameter: 6.8 mm Distance from probe tip to dipole centers: 2.7 mm
Application	General dosimetry up to 3 GHz Compliance tests of mobile phones Fast automatic scanning in arbitrary phantoms

Certificate Number: 1819-01

6.   DESCRIPTION OF THE TEST PROCEDURE

6.1   Test Positions

The device was placed into a holder using a special positioning tool, which aligns the bottom of the device with the holder and ensures that holder contacts only to the sides of the device. After positioning is done, the tool is removed. This method provides standard positioning and separation, and also ensures free space for antenna.

Device holder was provided by SPEAG together with the DASY3.

6.1.1   Against Phantom Head

Measurements were made on both the "left hand" and "right hand" side of the phantom.

The device was positioned against phantom according to OET Bulletin 65 (97-01) Supplement C (01-01). Definitions of terms used in aligning the device to a head phantom are available in IEEE Std 1528-200X "Draft Recommended Practice for Determining the Spatial-Peak Specific Absorption Rate (SAR) in the Human Body Due to Wireless Communications Devices: Experimental Techniques"

6.1.1.1   Initial Ear Position

The device was initially positioned with the earpiece region pressed against the ear spacer of a head phantom parallel to the "Neck-Front" line defined along the base of the ear spacer that contains the "ear reference point". The "test device reference point" is aligned to the "ear reference point" on the head phantom and the "vertical centerline" is aligned to the "phantom reference plane".

6.1.1.2   Touch Position

"Initial ear position" alignments are maintained and the device is brought toward the mouth of the head phantom by pivoting along the "Neck-Front" line until any point on the display, keypad or mouthpiece portions of the handset is in contact with the phantom or when any portion of a foldout, sliding or similar keypad cover opened to its intended self-adjusting normal use position is in contact with the cheek or mouth of the phantom.

TCC

Test & Certification Center (TCC) – Dallas

FCC ID: QMNRH-27
Test Report #: 02-RF-0223

ACCREDITED

Accredited Laboratory
Certificate Number: 1819-01

The following picture shows the tested device in the right touch position:
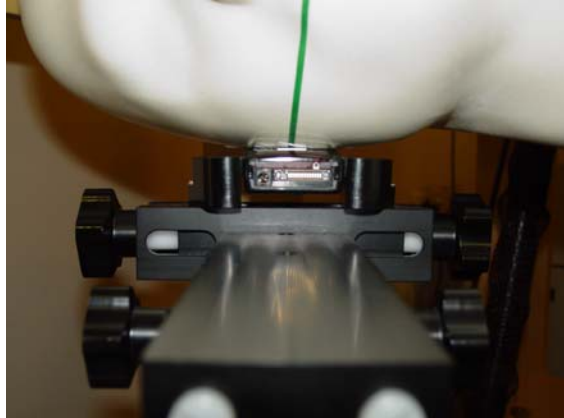

6.1.1.3   Tilt Position

In the "Touch Position", if the earpiece of the device is not in full contact with the phantom's ear spacer and the peak SAR location for the "touch position" is located at the ear spacer region or corresponds to the earpiece region of the handset, the device is returned to the "initial ear position" by rotating it away from the mouth until the earpiece is in full contact with the ear spacer. Otherwise, the device is moved away from the cheek perpendicular to the line passes through both "ear reference points" for approximate 2-3 cm. While it is in this position, the device is tilted away from the mouth with respect to the "test device reference point" by 15°. After the tilt, it is then moved back toward the head perpendicular to the line passes through both "ear reference points" until the device touches the phantom or the ear spacer. If the antenna touches the head first, the positioning process is repeated with a tilt angle less than 15° so that the device and its antenna would touch the phantom simultaneously.

The following picture shows the tested device in the right tilt position:

Test & Certification Center (TCC) – Dallas

FCC ID: QMNRH-27
Test Report #: 02-RF-0223

Accredited Laboratory
Certificate Number: 1819-01

6.1.2   Body Worn Configuration

Body SAR measurements were performed with the antenna facing towards the flat part of the phantom with a separation distance of 22mm and with the HDB-4, HS-1C or HDK-1K headset connected.

The following picture shows the tested device in the body test position: -
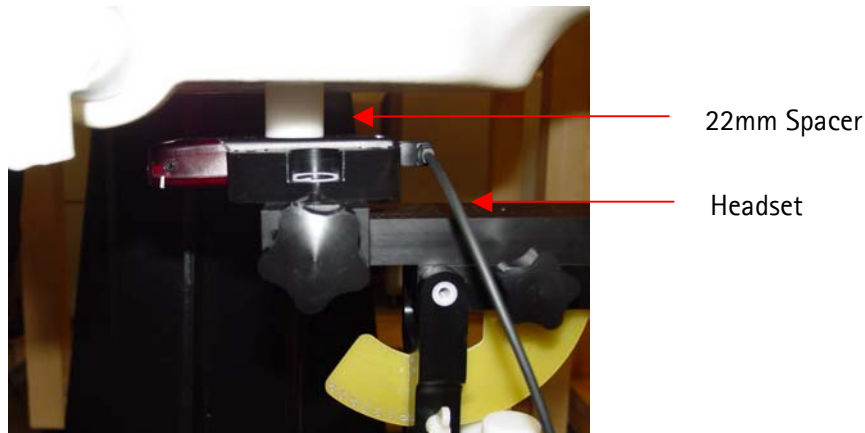

Note: the 22mm spacer was removed before the SAR measurement.

6.2   Scan Procedures

First coarse scans are used for quick determination of the field distribution. Next a cube scan, 5x5x7 points; spacing between each point 8x8x5 mm, is performed around the highest E-field value to determine the averaged SAR-distribution over 1g.

6.3   SAR Averaging Methods

The maximum SAR value is averaged over its volume using interpolation and extrapolation.

The interpolation of the points is done with a 3d-Spline. The 3d-Spline is composed of three one-dimensional splines with the "Not a knot" -condition [W. Gander, Computermathematik, p. 141-150] (x, y and z -directions) [Numerical Recipes in C, Second Edition, p 123].

The extrapolation is based on least square algorithm [W. Gander, Computermathematik, p.168-180]. Through the points in the first 30 mm in all z-axis, polynomials of order four are calculated. This polynomial is then used to evaluate the points between the surface and the probe tip. The points, calculated from the surface, have a distance of 1mm from one another.

8.   RESULTS

Corresponding SAR distribution print outs of maximum results in every operating mode and position are shown in Appendix C; z-axis plots of the maximum measurement results in head and body worn configurations are also included. The SAR distributions are substantially similar or equivalent to the plots submitted, regardless of used channel in each mode and position unless otherwise presented.

8.1   Head Configuration

Mode	Channel/ f(MHz)	Power (dBm)[1]	SAR, averaged over 1g (mW/g)

TCC

Test & Certification Center (TCC) – Dallas

FCC ID: QMNRH-27
Test Report #: 02-RF-0223

Accredited Laboratory
Certificate Number: 1819-01

APPENDIX A: SCOPE OF ACCREDITATION FOR A2LA

TCC-Dallas is accredited by the American Association for Laboratory Accreditation (A2LA) as shown in the scope below:

THE AMERICAN
ASSOCIATION
FOR LABORATORY
ACCREDITATION

ACCREDITED LABORATORY

A2LA has accredited

NOKIA MOBILE PHONES
Test & Certification Center - Dallas
Irving, TX

for technical competence in the field of

Electrical Testing

The accreditation covers the specific tests and types of tests listed on the agreed scope of accreditation. This laboratory meets the requirements of ISO/IEC 17025 - 1999 "General Requirements for the Competence of Testing and Calibration Laboratories" and any additional program requirements in the identified field of testing. Testing and calibration laboratories that comply with this International Standard also operate in accordance with ISO 9001 or ISO 9002.

Presented this 1st day of October, 2001.

President
For the Accreditation Council
Certificate Number 1819.01
Valid to November 30, 2003

For tests or types of tests to which this accreditation applies, please refer to the laboratory's Electrical Scope of Accreditation

TCC

Test & Certification Center (TCC) – Dallas

FCC ID: QMNRH-27
Test Report #: 02-RF-0223

Accredited Laboratory
Certificate Number: 1819-01

"This laboratory is accredited by the American Association for Laboratory Accreditation (A2LA) and the results shown in this report have been determined to be in accordance with the laboratory's terms of accreditation unless stated otherwise in the report."

Should this report contain any data for tests for which we are not accredited, such data would not be covered by this laboratory's A2LA accreditation

APPENDIX B: VALIDATION TEST PRINTOUTS

Dipole 900 MHz, Head Validation

SAM 1 (Cellular - Brain Tissue)
Frequency: 900 MHz; Crest factor: 1.0
Validation 900MHz - Brain Tissue: $\sigma = 0.97$ mho/m $\varepsilon_r = 41.9$ $\rho = 1.00$ g/cm³
Probe: ET3DV6 - SN1504; ConvF(6.50,6.50,6.50)
Cubes (2): Peak: 4.23   mW/g ± 0.03 dB, SAR (1g): 2.62   mW/g ± 0.01 dB, SAR (10g): 1.65   mW/g ± 0.01 dB, (Worst-case extrapolation)
Penetration depth: 11.3 (10.2, 12.9) [mm]
Powerdrift: -0.52 dB
Liquid Temperature (°C): 20.0
