RE: FCC ID: QMNRM-19\_ATCB001821

Attention: Andreas Gillmeier

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that a close up look at the plot on page 35 of the part 22/24 test report appears to show that the emissions mask is not met. The emissions at the 20kHz + and – from the fundamental appear to be out of compliance. While this may be due to blurred plot data, it needs to be addressed. Please explain.
2. Please note that the SAR report gives conducted power (page 3 of the SAR report) and the EMC report gives ERP (page 11 of the EMC report). Please note that some comparison of power between the SAR and EMC report must be made and this comparison must be the same type. Please provide conducted power measured at the device antenna terminal for the EMC report or please provide ERP values for the SAR report. Please note that conducted power between the SAR and EMC reports must be within +/- 0.5dB and ERP values must be within +/-3dB. If the reference powers between the two reports cannot be made, please retest SAR using a device within the specified limitations.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
