

## TEST REPORT

**Ref. Report No.**

06-1341-014-02

**Name and address of the applicant**

Felio Electronics Sdn. Bhd.  
Lot 5, Jalan Gudang 1619, Seksyen 16, 40200 Shah Alam,  
Selangor Darul Ehsan, Malaysia

**Standard / Test regulation**

FCC Part 15, Subpart B

**Test result**

Pass

Incoming date : May 03, 2006

Test date : May 15, 2006

**Test item(s) ;**

Superheterodyne Receiver  
(Tire Pressure Monitoring System)

**Model/type ref. ;**

TPMS - Receiver Module

**Manufacturer ;**

Felio Electronics Sdn. Bhd.

**Additional information ;**

- Required Authorization : Certification
- FCC ID. :QN5TPMS-RX
- Note : Test report(Certification) of  
Transmitter portion of this System is issued  
on Ref. Report No.06-1341-014-01

*This test report only responds to the tested sample and shall not be reproduced except in full without written approval of the Korea Testing Laboratory.*

**Tested and reported by**

Sung-Kyu Cho, Engineer

**Reviewed by**

Seok-Jin Kim, Telecommunication Team  
Manager

# KOREA TESTING LABORATORY

**TABLE OF CONTENTS**

I. GENERAL INFORMATION.....	3
1. Grantee's Name and Mailing Address	
2. Manufacturer's Name and Mailing Address	
3. Equipment Descriptions	
4. Rules and Regulations	
5. Measuring Procedure	
6. Place of Measurement	
7. Date of Measurement	
II. GENERAL REQUIREMENTS OF THE EUT.....	4

2. Photograph for the test configuration	
3. Sample Calculation	
4. Measurement Data	
IV. TEST EQUIPMENTS USED FOR MEASUREMENT.....	9

**I. GENERAL INFORMATION**

1. Grantee's Name and : Felio Electronics Sdn. Bhd.  
Mailing Address : Lot 5, Jalan Gudang 1619, Seksyen 16, 40200 Shah Alam,  
Selangor Darul Ehsan, Malaysia

2. Manufacturer's Name and : Felio Electronics Sdn. Bhd.  
Mailing Address : Lot 5, Jalan Gudang 1619, Seksyen 16, 40200 Shah Alam,  
Selangor Darul Ehsan, Malaysia

3. Equipment Descriptions

3.1 Operating Frequency : 315 MHz  
3.2 Detect Method : Superheterodyne Detector  
3.3 Power Supply : DC 12V(Car Battery)

4. Rules and Regulations : FCC Part 15, Subpart B

5. Measuring Procedure : ANSI C63.4-2003

6. Place of Measurement : Absorber-lined Room (KTL)

7. Date of Measurement

7.1 Conducted Emission : Not Applicable  
7.2 Radiated Emission : May 15, 2006

## **II. GENERAL REQUIREMENTS OF THE EUT**

### 1. Labeling Requirement (Section 15.19)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interface, and (2) this device must accept any interference received, including interference that may cause undesired operation.

1.1 Location of Label : User's Guide Manual

1.2 How Applied : Printed

### 2. Information to User (Section 15.21)

The following or similar statements were provided in the manual for user instruction.

Please refer page 4 of the attached manual for details.

**CAUTION** : Any changes or modifications in construction of this device which are not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

### 3. Special Accessories (Section 15.27)

3.1 Were the special Accessories provided? [ ] yes, [ ☒ ] no

3.2 If yes, details for the special accessories are as follows :

3.3 If yes, were the appropriate instructions provided on the first page of the text concerned with the installation of the device?

[ ] yes, [ ] no

3.4 Are these accessories provided of the type which can be readily obtained from multiple retail outlets ?

[ ] yes, [ ] no

And therefore does the manual specify what additional components or accessories are required to used in order to comply with the Rules?

[ ] yes, [ ] no

### **III. RADIATED EMISSION MEASUREMENT (Section 15.109)**

#### **1. Test Procedure**

##### **1.1 Preliminary Testing for Reference**

Preliminary testing was performed in a KTL absorber-lined room to determine the emission characteristics of the EUT. The EUT was placed on the wooden table which has dimensions of 0.8 meters in height, 1 meter in length and 1.5 meters in width. Receiving antenna (Biconi-Log antenna : 30 to 1000 MHz or Horn Antenna : 1 to 18 GHz) was placed at the distance of 1 meter from the EUT.

An attempt was made to maximize the emission level with the various configurations of the EUT. Emission levels from the EUT with various configurations were examined on a spectrum analyzer connected with a RF amplifier and graphed by a plotter.

##### **1.2 Final Radiated Emission Test at an Absorber-Lined Room**

The final measurement of radiated field strength was carried out in a KTL absorber-lined Room that was listed up at FCC according to the "Radiated Emissions Testing" procedure specified by ANSI C63.4.

Based on the test results in preliminary test, measurement was made in same test set up and configuration with 3 orthogonal planes which produced maximum emission level. Receiving antenna was installed at 3-meter distance from the EUT, and was connected to an EMI receiver or spectrum analyzer with a RF amplifier. An unmodulated CW signal at operating frequency of the EUT was supplied to the EUT for all measurements.

Turntable was rotated through 360 degrees and receiving antenna height was varied from 1 to 4 meters above the ground plane with horizontal and vertical polarization to read maximum emission level.

If necessary, the radiated emission measurements could be performed at a closer distance than specified distance to ensure higher accuracy and their results were extrapolated to the specified distance using an inverse linear distance extrapolation factor(20dB/decade) as per Section 15.31(f).

The maximum emission level from the EUT occurred in such configuration as shown in the following photograph.

## 2. Photograph of the test configuration

## 3. Sample Calculation

The emission level measured in decibels above one microvolt ( $\text{dB } \mu\text{V}$ ) was converted into microvolt per meter ( $\mu\text{V/m}$ ) as shown in following sample calculation.

For example :

Measured Value at	<u>373.5 MHz</u>	39.5 dB $\mu\text{V}$
+ Antenna Factor		14.7 dB/m
+ Cable Loss		2.8 dB
– Preamplifier		30.0 dB
– Distance Correction Factor *		0.0 dB
= Radiated Emission		27.0 dB $\mu\text{V/m}$ (22.4 $\mu\text{V/m}$ )

\* Extrapolated from the measured distance to the specified distance by an inverse linear distance extrapolation.

## 4. Measurement Data

- Resolution Bandwidth: -CISPR Quasi-Peak (6 dB Bandwidth: 120 kHz for ranges below 1 GHz)  
-Peak (3 dB Bandwidth : 1 MHz for ranges over 1 GHz)
- Measurement Distance: 3 Meter

Frequency (MHz)	* D.M.	* A.P.	Measured Value (dB $\mu$ V)	* A.F. + C.L. (dB/m)	* A.G. (dB)	* D.C.F. (dB)	Emission Level		Limit (dB $\mu$ V/m)	** Margin (dB)
							dB $\mu$ V/m	$\mu$ V/m		
306.5	Q	V	36.5	15.7	-30.0	--	22.2	12.9	46.0	- 23.8
330.5	Q	V	35.2	16.4	-30.0	--	21.6	12.0	46.0	- 24.4
373.5	Q	V	39.5	17.5	-30.0	--	27.0	22.4	46.0	- 19.0
382.0	Q	V	37.2	17.7	-30.0	--	24.9	17.6	46.0	- 21.1

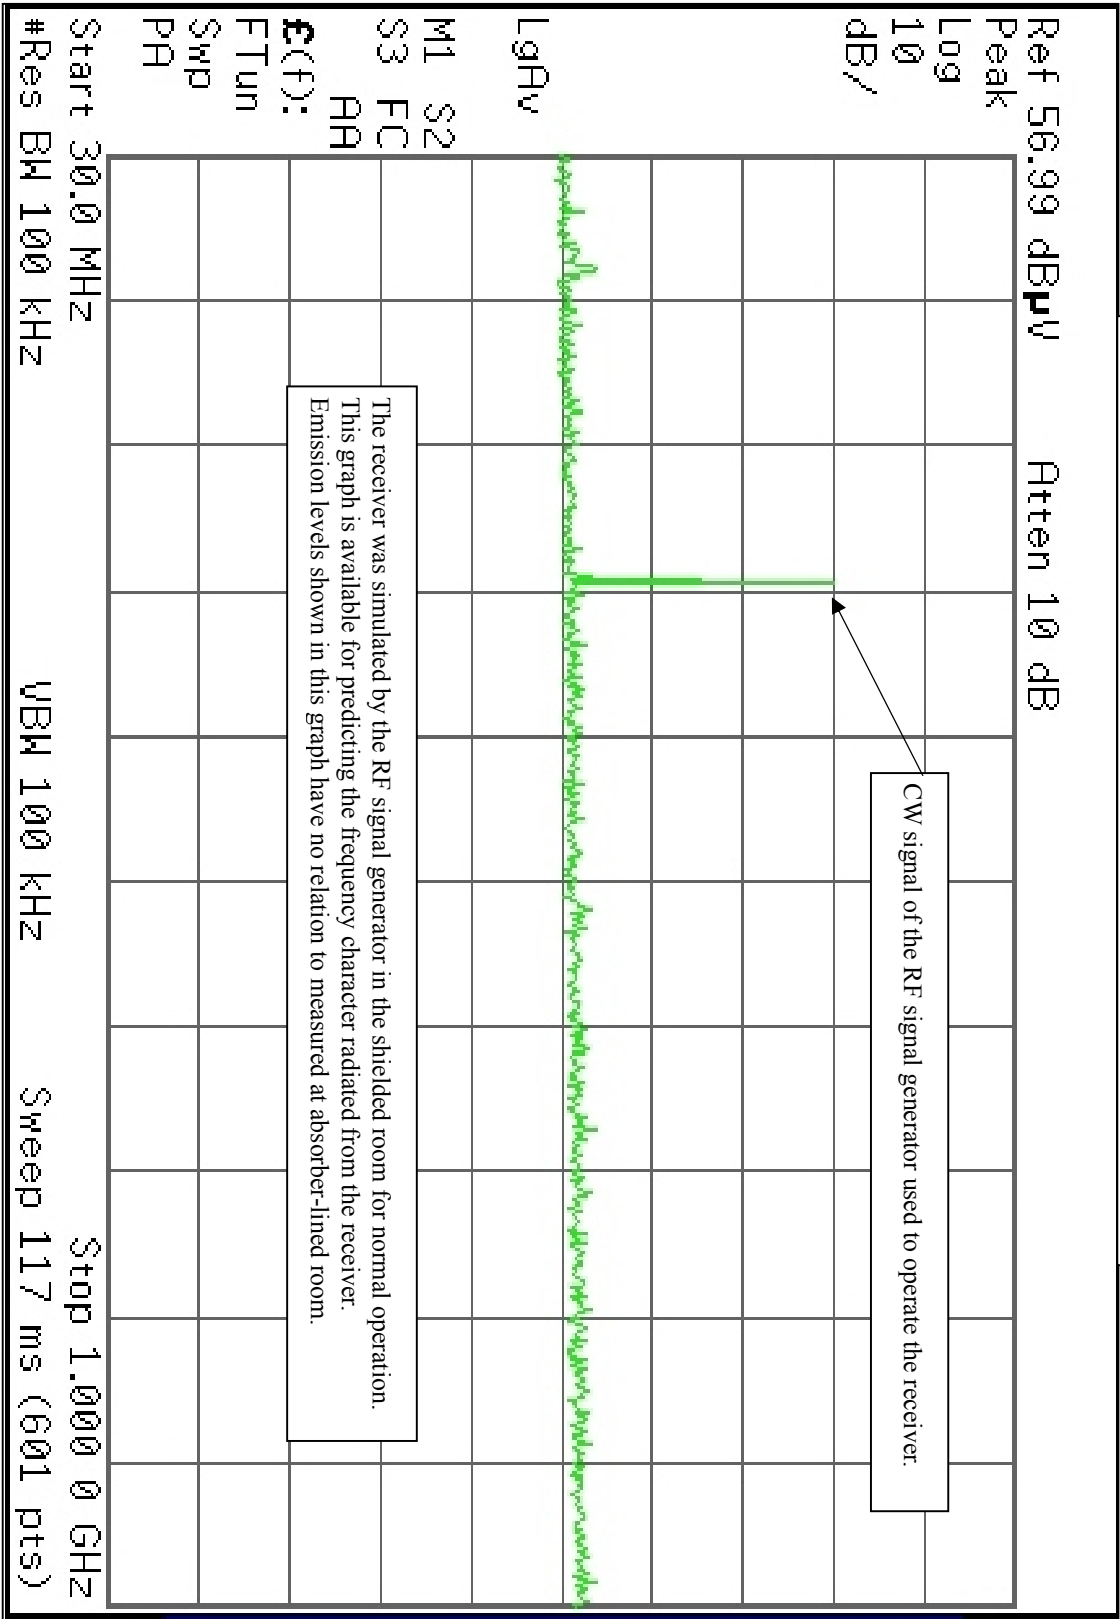

Note

The upper frequency range of this test was 5 GHz. The observed EMI Test Receiver's noise floor level with RF preamplifier was 30.0 dB $\mu$ V for range below 1GHz and 35.0 dB $\mu$ V for range above 1GHz. And all other emissions not reported on data were more than 30 dB below the permitted level.

\* D.M. : Detect Mode (P : Peak, Q : Quasi-Peak, A : Average)  
A.P. : Antenna Polarization (H : Horizontal, V : Vertical)  
A.F. : Antenna Factor  
C.L. : Cable Loss  
A.G. : Amplifier Gain  
D.C.F. : Distance Correction Factor  
< : Less than

\*\* Margin (dB) = Emission Level (dB) - Limit (dB)

5. Reference Data (Frequency spectrum data on radiated emission form the receiver)

**IV. TEST EQUIPMENT USED FOR MEASUREMENTS**

<u>Equipment</u>	<u>Model No.</u>	<u>Manufacturer</u>	<u>Serial No.</u>	<u>Effective Cal. Duration</u>
[x] EMI Receiver (20 MHz-1 GHz)	ESVS30	R & S	830516/002	03/25/06-03/25/07
