

Make your laser device wireless! Display alerts on any of our display units, or link with ActiveStealth GPS enabled PDAs, smartphones or Sat Nav units.

This easy to fit LASERnode unit connects to your choice of the following laser units, using the supplied connector cable*:

- LE 30
- Blinder M20
- Blinder M40
- LaserPro Park
- LT 400

The LASERnode intelligently recognises which laser device it is connected to and automatically selects the correct mode. You don't have to select anything! It's that easy - it just works!

The LASERnode transmitter makes all these laser devices wireless and ActiveStealth Compatible. The LASERnode sends wireless diffuser alerts to the SMARTnode GPS receiver via a high speed wireless datalink and the SMARTnode instantly relays it as a Bluetooth warning to your PDA, Smartphone or sat nav device running ActiveStealth software.

The LASERnode also makes all these laser devices compatible with Cheetah's other products, allowing diffuser warnings to be given through the following warning units:

- AUDIONode
- LIGHTnode
- GPS Mirror
- Cheetah Sentinel
