Trigger Button ZR

L button

R button

Charging indicator LED
When charging, LED is on,
LED off when full.

USB C :
1. USB data
2. INPUT:5V,500mA

Motor vibration intensity adjustment

The motor adjusts a total of 5 gears, 100% of the vibration of the first gear, 75% of the vibration of the second gear, 50% of the vibration of the third gear, 25% of the vibration of the fourth gear, and 0% of the vibration of the fifth gear.

The methods of operation are as follows:

1. Hold down the turbo key first and then hold down the direction key up to strengthen the vibration of the motor. If in 2 gears, press the key up to become 1 gear, each shift, the motor should also vibrate for 1 second, if adjusted to 2 gears, then the motor is 75% vibration intensity vibration for 1 second.

(Note: when you change to gear 1, you can't adjust it up any more.)

2. Hold down the turbo key first and then hold down the direction key down to weaken the vibration of the motor. If in the second gear, press the key down, it will become 3 gears ,each shift, the motor should also vibrate for 1 second,if adjusted to 3 gears, then the motor is 50% vibration intensity vibration for 1 second.

Backlight led brightness adjustment

ZL+ZR+R3 and direction key up and down to adjust the light intensity of the handle, a total of 5 gear, 1 gear 100%, 2 gear 75%, 3 gear 50%, 4 gear 25%, 5 gear off backlight.

The methods of operation are as follows:

1. Hold down the ZL+ ZR+ R3 key and then hold down the direction key up to strengthe the brightness of LED. If in 2 gear, press the key up, then become 1 gear. (Note: when you change to gear 1, you can't turn it up any more.)
2. Hold down the ZL+ZR+R3 key and then hold down the direction key down, then the brightness of led decreases. If you press the key down when you are in the second gear, it becomes the third gear. (Note: annular and abxy led are brightened and weakened at the same time. And in turbo mode, the annular red led is weakened and strengthened at the same time.)

(Note: When programmed, the motor and led are the strongest by default, and both the motor and backlight have memory function.)

FCC Caution.

§ 15.19 Labelling requirements.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

§ 15.21 Changes or modification warning.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

§ 15.105 Information to the user.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
