

RF Operation Description

1. Make use of the SW1 and SW2 to open/short circuit for control code.
2. Use the U2 to create the code.
3. The code mixed the carrier wave by U3.
4. And amplified this mixed signal by U3.
5. Then, oscillated the mixed signal of TONE (433.92MHz) by Q4.
6. Make use of the L2 to send the RF signal to receiver.
