RE: FCC ID SEAMOD23

To Whom It May Concern:

The attached application is for a modular transmitter that is both a 6 to 7 GHz wideband device operating under Part 15.250 and a Part 15.249 device operating in the band 2400 to 2483.5 MHz. The assembly consists of a module with integral antennas.

Previously similar devices from this applicant were certified as Part 15.250/15.249 composite devices (e.g. FCC ID: SEATAG23), and we are again following the FCC's guidance relating to previous certifications, which directed us to submit test reports for both the 15.250 and 15.249 transmitters under a single FCC ID.

Should you have any questions or require any further information with regards to this, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Andy Ward'.

Dr Andy Ward
Chief Technology Officer
