

TCB: According to your test setup photos only the EUT was on the turntable during JBP measurements. For computer peripheral testing please use the configuration defined in section 11.1.2.1 in ANSI C63.4:2003. Please pay special attention for populating appropriate ports on the host.

Applicant: During the measurement the USB Stick was connected via USB extension cable on a Power supply (Conducted Emission on AC Mains) and on a laptop (All radiated measurements). Unfortunately the laptop was placed below the table and so it was not shown on the picture.

For future projects I will place the laptop on the table near by the EuT.
