Hi Helen,

Please refer to the below for details.

Best Regards,

Susan

Question #1: The user manual indicates that the built-in rechargeable battery can be charged through the USB cable or the travel charger. The test report shows only charging mode with travel charger has been investigated during power line conducted emission testing. Please provide additional LC test data for charging mode with USB cable.

Ans #1: Two configurations of USB cable and travel charger have been retested, and travel charger mode was reported as worst case. Please refer to attached for the revised test report.

Question #2: Please explain the test setup for RF conducted testing. Please mark on the setup photo if necessary. It appears the test setup described in the test report does not agree with test setup photo.

Ans #2: Yes, we did use a test jig (a modified USB dongle) to control the channel for all tests. We have re-took set up photos again as attached revised setup photos.

Best Regards,

Helen Zhao

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
