# ZTE CORPORATION

Software change clarification

For disable some frequency bands:
Modem software protocol stack will block all unwanted bands and only leave required bands.

For disable SIM2:
From hardware perspective, UIM2 won't power on; from modem software UIM task perspective, UIM2 won't be activated; from Android software perspective, UIM2 won't be reported so UI won't show UIM2 icon. The UIM2 turns to be a TF displayed on the UI.
