Class II permissive change measurements on RUS 01 B5 850 MHz radio equipment with FCC ID:TA8AKRC11864-2 and IC:287AB-AS118642 (5 appendices)

Test object

RUS 01 B5, KRC 118 64/2 Rev R2A, serial no: C824438427

Summary

Standard	Compliant	Appendix
FCC CFR 47 / IC RSS-132		
2.1046 / RSS-132 4.4 RF power output	Yes	2
2.1051 / RSS-132 4.5 Spurious emission at antenna terminals	Yes	3
2.1053 / RSS-132 4.5 Field strength of spurious radiation	Yes	4

Note: Above RSS-132 items are given as cross-reference only. Measurements were performed according to ANSI procedures referenced by FCC and covered by SP's accreditation.

Appendix 1

Description – Test object

Equipment:	Multi standard radio equipment RUS 01 B5 running in WCDMA and GSM mode in multi standard configuration
Antenna ports:	1 TX/RX port and 1 RX port
Frequency bands:	TX: 869 – 894 MHz RX: 824 – 849 MHz
Modulations:	QPSK, 16QAM and 64QAM (WCDMA) GMSK, 16QAM, 32QAM, AQPSK and 8PSK (GSM)
Number of carriers:	Maximum 4 carrier (1-2 WCDMA carriers and 1-3 GSM carriers)
Nominal output power: (Maximum)	47.8 dBm total power (60W)
Channel distribution:	Contiguous and Non-contiguous spectrum
IF band width	20 MHz
Channel bandwidth:	4.2 to 5 MHz (configurable in steps of 100/200 kHz)
Channel spacing:	4.4 to 5 MHz (configurable in steps of 100/200 kHz)
Nominal power voltage:	-48 VDC

WCDMA operation mode during measurements

Measurements were performed with the test object transmitting the Test model TM1 which are defined in 3GPP TS 25.141.

The settings below were found to be representative for all traffic scenarios when several settings with the different number of carriers were tested to find the worst case setting. These settings were used for all measurements if not otherwise noted.

One WCDMA carrier
TM1: 64 DPCH:s at 30 ksps (SF=128)
Channel bandwidth 5 MHz
Modulation: QPSK

GSM operation mode during measurements

The settings below were found to be representative for all traffic scenarios when several settings with the different modulations and number of carriers were tested to find the worst case setting.

Unless otherwise stated, all measurements were performed with GMSK modulation with the test object transmitting pseudorandom data in all timeslots and settings for maximum transmitter output power applicable for each configuration.

Two GSM carriers

Appendix 1

Tested configurations:

Configuration 1:

GSM			WCDMA
Carrier	1 (20 W)	2 (20 W)	1 (20 W)
Downlink	129 (869.4 MHz)	137 (871.0 MHz)	4420 (884 MHz)
Uplink	129 (824.4 MHz)	137 (826.0 MHz)	4195 (839 MHz)

Configuration 2:

GSM			WCDMA
TRX	1 (20 W)	2 (20 W)	1 (20 W)
Downlink	129 (869.4 MHz)	137 (871.0 MHz)	4369 (873.8 MHz)
Uplink	129 (824.4 MHz)	137 (826.0 MHz)	4144 (828.8 MHz)

Configuration 3:

GSM			WCDMA
TRX	1(20 W)	2 (20 W)	1 (20 W)
Downlink	242 (892 MHz)	250 (893.6 MHz)	4403 (880.6 MHz)
Uplink	242 (847 MHz)	250 (848.6 MHz)	4178 (835.6 MHz)

Configuration 4:

GSM			WCDMA
TRX	1 (20 W)	2 (20 W)	1 (20 W)
Downlink	180 (879.6MHz)	239 (891.4 MHz)	4427 (885.5 MHz)
Uplink	180 (834.6MHz)	239 (846.4 MHz)	4202 (840.5 MHz)

Configuration 5:

GSM			WCDMA
TRX	1 (20 W)	2 (20 W)	1 (20 W)
Downlink	140 (871.6 MHz)	199 (883.4 MHz)	1037 (877.5 MHz)
Uplink	140 (826.6MHz)	199 (838.4 MHz)	812 (832.5 MHz)

Appendix 1

Conducted measurements

The EUT was mounted into a RBS 6201 cabinet and supplied by the cabinet's internal -48 V DC. All RF conducted measurements were performed with the test object configured for maximum transmit power. All TX measurements were done at the RF A connector.

Radiated measurements

The test object was powered with -48 VDC. All measurements were performed with the test object configured for maximum transmit power. The configurations represents worst case for radiated spurious emission measurements.

The RF output power port was via a RF attenuator connected to functional test equipment for supervision.

Purpose of test

The purpose of this test is to justify a Class II Permissive Change of the test object to include the use of multi- standard radio (MSR) for access technologies GSM and WCDMA running in Contiguous and Non- contiguous mode.

Testo 635 temperature and humidity meter	504 203

Measurement uncertainty: 3.7 dB

Results

Diagram 1:a-e Configuration 1
Diagram 2:a-e Configuration 2
Diagram 3:a-e Configuration 3
Diagram 4:a-e Configuration 4
Diagram 5: a-e Configuration 5

Remark

The emission at 9 kHz on the plots was not generated by the test object. A complementary measurement with a smaller RBW showed that it was related to the LO feed-through.

The highest internal frequency as declared by the client was 2.4576 GHz, thus the choice of the upper frequency boundary was set to $10 \times 2.5 \text{ GHz} = 25 \text{ GHz}$ for emission measurements.

Limits

Outside a licensee's frequency band(s) of operation the power of any emission shall be attenuated below the transmitter power (P) by at least $43 + 10 \log (P)$ dB, resulting in a limit of -13 dBm per 1 MHz RBW.

Complies?	Yes

Date 2012-04-04	Temperature 22 °C ± 3 °C	Humidity 13 % ± 5 %
--------------------	-----------------------------	------------------------

Test set-up and procedure

The test sites are listed at FCC, Columbia with registration number: 93866. The test site complies with RSS-Gen, Industry Canada file no. 3482A-1.

The measurements were performed with both horizontal and vertical polarization of the antenna. The antenna distance was 3 m in the frequency range 30 MHz – 18 GHz and 1m in the frequency range 18 - 25 GHz.

In the frequency range 30 MHz - 25 GHz the measurement was performed in power with a RBW of 1 MHz. A propagation loss in free space was calculated. The used formula was

$$\gamma = 20 \log \left(\frac{4\pi D}{\lambda} \right), \gamma \text{ is the propagation loss and } D \text{ is the antenna distance.}$$

The measurement procedure was as the following:

1. The pre-measurement was first performed with peak detector. The EUT was measured in eight directions and with the antenna at three heights, 1.0 m, 1.5 m and 2.0 m.
2. Spurious radiation on frequencies closer than 20 dB to the limit in the pre-measurement is scanned 0-360 degrees and the antenna is scanned 1- 4 m for maximum response. The emission is then measured with the RMS detector and the RMS value is reported. Frequencies closer than 10 dB to the limit when measured with the RMS detector were measured with the substitution method according to the standard.

The test set-up during the spurious radiation measurements is shown in the picture below:
