Federal Communications Commission

Subject: Purpose of this Application

To whom it may concern,

Datalogic Mobile, Inc is applying for a Class II permissive change authorization of FCC ID: U4SRS. No changes have been made to the radio, or to the host device enclosure. The only change is a new antenna will be used with the 802.11b/g radio on internal Port B. The antenna attached to internal Port A has not changed.

A test report has been submitted to demonstrate compliance to FCC 15.247(d) spurious radiated emissions requirements.

Per FCC KDB Document 178919 D01 Permissive Change Policy v04r04, Section 5(b)(iii)(3), SAR evaluation is not required because this is an equivalent antenna with lower gain. Also, the highest SAR value measured for the previous certification was only 0.079 W/kg.

An antenna exhibit has been provided with information regarding the new antenna.

Sincerely,

A handwritten signature in black ink, appearing to read "Jerry L. Kalina", written over a horizontal line.
