Columbia, MD 21046

Dear Application Examiner:

Summit Semiconductor LLC has designed and built a digital wireless master device. Summit Semiconductor LLC requests the FCC Equipment and Authorization branch to grant an original certification for our wireless master device, Model No: 444-2203 and FCC ID: UA9100.

The 444-2203 Summit Master Module is a turnkey solution that enables customers to start volume production of high performance digital wireless audio source devices. The 444-2203 is designed to be integrated into an audio source device such as AVRs, DVDs, TVs, game platforms, set top boxes, or wireless hubs. It is an IEEE 802.11a compliant radio operating in the UNII band and operates in accordance with the master mode as stated in FCC 06-96 document.

This device was tested at NWEMC's Oregon facility for rule parts 15.247 and 15.407 and at CCS California facility for rule parts 15.407. The device was tested for all the requirements necessary to certify it as a limited modular, DFS capable, 21 channel transmitter. The device is subject to verification and not DoC because it is not a PC peripheral.

Please address any corresponding regarding this filing to my attention at the following address.
