

## T955WH Operation description

By using “LIGHT” key and touch screen keys, T955WH establishes communication with remote and set all technical data, CPU chip will process those data and transmit to IC 24C64 to memorize, then CPU will enter into sleeping mode. When T955W received data from R250W and R251W, CPU will be activated and process those data then transmit the data to R270W.
