

SUPPLEMENT TO THE RM-1~~GETTING STARTED~~ GUIDE

The RM-1 is only for use by RGIS employees for inventory, merchandising, mapping or other data collection purposes. The RM-1 transmits wireless signals and should only be used as instructed. Failure to use as instructed could expose the user to higher levels of radio emissions, even though the transmission levels of the RM-1 are low. The user should in no way try to alter the radio settings as provided by RGIS. Changes or modifications not expressly approved by RGIS could void the user's authorization to operate the equipment.
