

Circuit Description

D970TH

1. The power part:

The power is 12V made up of Switching power supply.

2. The voltage conversion part:

The voltage conversion by a DC-DC IC and LDO, its function is to supply 1.2V and 3.3V voltage for system.

3. The sensor part:

Image is the A7121 sensor chip produced.

4. The audio part:

Audio after LM4990 amplification processing, to the main chip.

5. The Core part:

The core functions by main chip HPC3129 and SDRAM HY57V641620FTP composition.

6. RF part:

RF by A7121 chips. A7121 is a monolithic CMOS integrated circuit for wireless applications in 2.4GHz ISM band.
