Columbia, MD 21046

SUBJECT: Application for Class II Permissive Change for FCC ID**:   XIA-CFW2132**

Dear Examiner,

This is to request a Class II Permissive Change for FCC ID: **XIA-CFW2132** (Approval Date: 5/28/2020) to enable the SAS Multi-step registration feature.

Multi-step registration is a process in which a CPI provides device registration information to the SAS without sending that information through the CBSD itself. The CBSD provides partial parameters as per the Multistep registration process and receives REG_PENDING response, and waits for the SAS to authorise it after the complete parameters are entered into the SAS portal by an operator.

Multi-step registration feature is enabled using software update and no hardware change is required.

CPI can be able to select Single or Multi step registration type during the installation time. But the end user will not be able to modify this feature.

Sincerely,

Signature:
