2. Use phone memory card as U disk

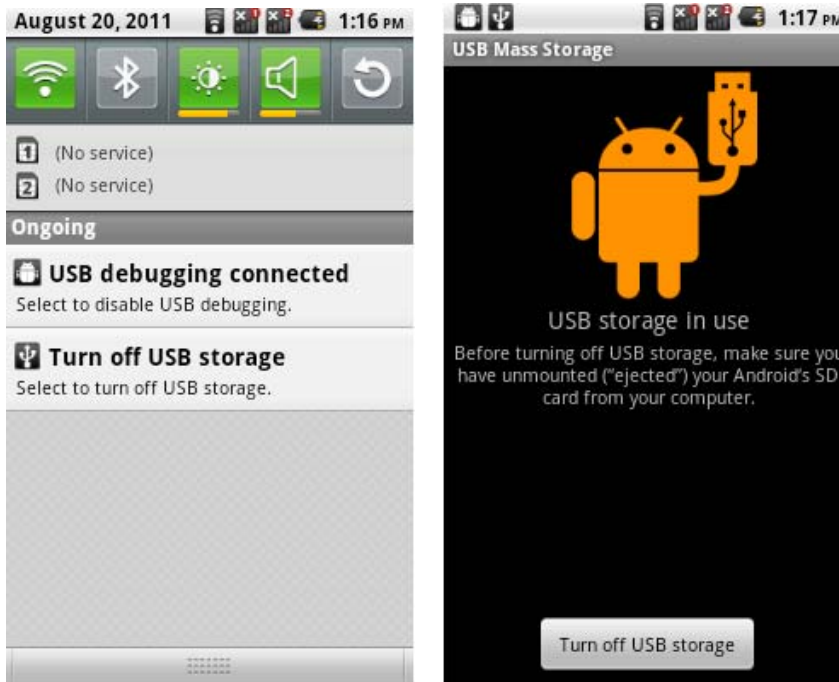

If you want to send music, photo and other files to your memo card, you must first set the memo card as U disk.

- Set memo card as U disk
 - 1) Connect phone to PC by USB cable, and the notice icon will displayed in state bar.
 - 2) Open notice panel.
 - 3) In notice panel, click USB connection, then click “ open USB memo device”.

- Notice: if you select to open USB device while your phone connected to PC, the phone will not identify the memo card. You will can't use some applications in phone, such as camera.
- Unload U disk from PC.

It is the same as connection, see next picture.

3.WI-FI

WI-FI provides wireless LAN within a range of farthest 300 feet, if you want to use WIFI in your phone, you must connect to the wireless Access Point or hot point.

- Note : the availability of WI-FI signal and cover range is decided by the number, basic structure, and the penetrating object by the other signal.

Open WI-FI and linked to wireless network

- 1) Press home page> menu, then click setting > wireless & networks
- 2) Select WI-FI check box to open WI-FI, and phone can auto scan the available wireless network.
- 3) Click WI-FI setting, and the WI-FI network list will show the found WI-FI network name and the security setting(open network or encrypted in WEP、 WPA/WPA2). If open the network notice in WI-FI setting, phone will display the icon  in state bar after found an available open wireless network.
- 4) Click one of the WI-FI network to connect, when you select open network, phone will auto connect to it, if you select the one that encrypted in WEP、 WPA/WPA2, you must input the corresponding password at first, then click connection.

- Note: when the phone connected to the network, WIFI icon () will displayed in state bar, and the rough signal strength will showed(the numbers of bright bar), if click the current connecting network, it will display WI-FI's name, state, speed, signal strength, security message and IP address. If you want to remove the setting of wireless network, please click don't save in the window, if you

want to connect again, and you must re-input the setting.

- Notice:

Unless you select not to save network, you needn't to input the password again next time when you reconnect to the encrypted network that linked before, WI-FI will auto search, that is phone will not execute the extra steps to link to WI-FI network.

- Connect to other WI-FI network

- 1) In wireless and network interface, click WI-FI setting, the found WI-FI network will displayed in network list.
- 2) Click the other WI-FI network, and you can connect to it.

- Note: otherwise, phone can go to internet via GPRS, the default of GPRS of SIM card is open after phone boot up, user can choose manually, the specific path is “ setting> SIM card management> date link”, click “data connection” to close current SIM card data connection.

Opening will prompt you EPO open confirm

- 4) EPO setting open GPS assist can do corresponding setting
- 5) A-GPS use assistance data can speed GPS location procedure.
Open will prompt you 'use A-GPS will produce GPRS flow'.

• Security

- 1) set screen lock use figure, PIN or password lock screen.

a. click 'figure', first time to set unlock figure will have a simple complain and example, click 'next' and enter the following step 'draw unlock figure'.

- b. click PIN input number PIN to unlock screen.
- c. click password can set password to unlock screen
- d. click none stop screen lock

- 2) SIM card lock input(4-8 bit digit) PIN can set SIM lock.

SIM card PIN (personal identification code) is to prevent SIM card from illegal use, PIN code normal provided with SIM card, default value is provided by service provider.

When modify the locked PIN code, you need 'SIM lock', then enter to change password interface, phone will auto prompt old PIN code input and require you to input new PIN code twice, in the end, phone will prompt you PIN code modify successful, if continuously input wrong PIN code for three times, SIM card PIN code will auto locked, PUK code normal provided with SIM card, if haven't, you should get the code at service provider.

If continuously input wrong PUK code for ten times, and the SIM will be locked forever.

- 3) password can be seen password can be seen while input.
- 4) select equipment manager add or delete equipment manager.
- 5) use security certification permit application visit security or other certifications.
- 6) install from SD card install encrypted certificate from SD card.
- 7) set password set or change certificate save password.
- 8) clear memo clear all certifications and reset the passwords.

• Applications

- 1) unknown source permit install non e-market provides applications.

- 2) manage applications manage and delete installed applications.

3) services in proceed click any service listed > pop out 'whether cancel ?' two key operations box, click 'cancel' and the service will be canceled, and disappeared from 'services in proceed' list.

- 4) the usage of memo you can view the memo occupancy of download file, all, SD card and the running programs .

- 5) the usage of power show time of using phone and the rough case that every function uses power.

- 6) development

- a. USB adjust: USB adjust only used to develop work. Use the function you can copy data between PC and mobile device.
- b. maintain awake state open the function, the screen will not sleep while charging.
- c. permit simulate place

• Account and sync

1) background data use background data applications can sync, send and receive data at any time, stop using background data can lengthen battery using time and decrease the usage of data, and some applications can use background data link.

2) auto sync open/close auto sync applications can auto sync data or out of sync.

• Privacy

Restore factory setting clear all data in phone.

• Save

1) you can check the memo using of SD card and phone.

2) you can unload or format SD card.

• Language and keyboard

1) select language include simple and tradition Chinese, the default of support 15 language.

2) user dictionary add or delete word to user dictionary. You can press Menu to add word, after this, at the time input method input word can auto math the word and display it.

3) Google Pinyin setting

Key sound, vibration, associated character input and switch between Chinese and English.

4) Android keyboard setting

When press key, the set is: vibration, play music, display pop window, touch to correct word, auto upper case, display the set key, input language (on space key to slide finger can change voice), display suggest(start associated character input display when input), auto fill in (when press space key and punctuation auto insert the word that displayed highlight).

5) select input method you can select at time the cursor moved to text box the default input method.

• Voice input and output setting

Word convert voice setting

1) Listening section play discontinuous voice combine section

2) Always use my setting use the following setting instead of application setting.

3) Default engine set voice combine engine that used to convert word to voice.

4) Install voice data install the voice data that voice combine is need.

5) Word speed the play speed after word convert to voice.

6) Language set the language that word convert to voice need.

7) Pico TTS

• Assistant function

1) Press ' power' button to end call while open, press 'power' button will end communication not to close screen when have a call.

2) Quickly boot close /open quickly boot up.

• Date and time

1) automatic provided through network

2) set date can slide year, month and day to set date

- 3) select time zone according your location to select the area time zone, china select 'GMT+08: 00、China standard time'。
- 4) set time you can slide hour, minute and morning or afternoon to set time.
- 5) use 24 hour format open 24 hour format and close 12 hour.
- 6) select date format there are seven date formats
 - a. normal (2010-12-31)
 - b. 12-31-2010
 - c. 31-12-2010
 - d. 2010-12-31
 - e. 周五, 12月31日, 2010年
 - f. 周五, 31日 12月2010年
 - g. 2010年12月31日, 周五

- Timing power on/off 

You can set timing power on/off time, also can select timing power on/off start time, repeat or a day in a week.

- About phone 

You can check state message and battery using information.

20. Notices While Using Handset

Your phone is the product with best design and craft, and you should carefully use. The next suggestions will help you comply with the contract repairing article, and lengthen phone use life.

- 1) Place phone and components to the place where children can't reach.
- 2) Keep your phone dry, rainwater, moisture and every kind of liquid maybe contains mineral substance, it will corrode the electronic circuit.
- 3) When battery is charging, please avoid touch your phone with wet hands, thus maybe get hurt by electric shock or damage your phone.
- 4) Avoid placing your phone in high temperature environment, high temperature will shorten electronic device life, damage battery, warping or melt the plastic parts.
- 5) Avoid placing your phone in too low temperature environment, with temperature increase, inside phone maybe produces water gas that may lead to electronic circuit damaged.
- 6) Avoid placing your phone in dusty, dirty place, or it maybe damage the parts.
- 7) Avoid putting your phone near the burning cigarette, naked light or any heat source.
- 8) Please don't disassemble your phone, nonprofessional treatment will leads to damage your phone.
- 9) Avoid falling from high place, knocking or shacking your phone , the rough using way will damage the circuit board inside.
- 10) Please don't paint your phone in pigment, because the painting will block earphone, headset or other mobile accessories, and can't be normal used.
- 11) Using clean, soft, dry cloth to clean camera, Prohibited the use of harmful chemicals, cleanser etc. to clean phone.

- 12) If phone, battery, charger or phone accessories malfunction, please send it to qualified service center nearby to check.
- 13) The staff of service center will provide help to you, if necessary they will arrange repairing you phone.

FCC RF EXPOSURE INFORMATION:

WARNING!! Read this information before using your phone

In August 1986 the Federal Communications Commission (FCC) of the United States with its action in Report and Order FCC **XJSACEI100** adopted an updated safety standard for human exposure to radio frequency (RF) electromagnetic energy emitted by FCC regulated transmitters. Those guidelines are consistent with the safety standard previously set by both U.S. and international standards bodies. The design of this phone complies with the FCC guidelines and these international standards. Use only the supplied or an approved antenna. Unauthorized antennas modifications, or attachments could impair call quality, damage the phone, or result in violation of FCC regulations. Do not use the phone with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Please contact your local dealer for replacement antenna.

Ad Hoc function is supported but not able to operate on non-US frequencies.---WIFI

BODY-WORN OPERATION:

This device was tested for typical body-worn operations with the back of the phone kept 1.5cm from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 1.5cm must be maintained between the user's body and the back of the phone, including the antenna, whether extended or retracted. Third-party belt-clips, holsters and similar accessories containing metallic components shall not be used. Body-worn accessories

that cannot maintain 1.5cm separation distance between the user's body and the back of the phone, and have not been tested for typical body-worn operations may not comply with FCC RF exposure limits and should be avoided.

For more information about RF exposure, please visit the FCC website at www.fcc.gov

Your wireless handheld portable telephone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out radio frequency (RF) signals. In August, 1996, the Federal Communications Commissions (FCC) adopted RF exposure guidelines with safety levels for hand-held wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

<ANSIC95.1> (1992) / <NCRP Report 86> (1986) / <ICIMIRP> (1996)

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1). Nevertheless, we recommend that you use a hands-free kit with your phone (such as an earpiece or headset) to avoid potential exposure to RF energy. The design of your phone complies with the FCC guidelines (and those standards).

Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

NORMAL POSITION:

Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

RF Exposure Information:

FCC RF Exposure requirements: The highest SAR value reported under this standard during product certification for use next to the body with the minimum separation distance of 1.5cm is **0.793W/kg**, next to the head is **0.881W/kg**. This transmitter must not be collocated or operating in conjunction with any other antenna or transmitter.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

Do not use the device with the environment which below minimum -10°C or maximum over 50°C , the device may not work.

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
