

MPE TEST REPORT

Applicant Quectel Wireless Solutions Co., Ltd

FCC ID XMR201909EG95NAX

Product LTE Module

Brand Quectel

Model EG95-NAX

Report No. R1907A0407-M1

Issue Date November 19, 2019

TA Technology (Shanghai) Co., Ltd. tested the above equipment in accordance with the requirements in **FCC 47 CFR Part 1 1.1310**. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

Performed by: Yu Wang

Approved by: Guangchang Fan

1.1 Notes of the Test Report

This report shall not be reproduced in full or partial, without the written approval of **TA technology** (shanghai) co., Ltd. The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein .Measurement Uncertainties were not taken into account and are published for informational purposes only. This report is written to support regulatory compliance of the applicable standards stated above.

1.2 Testing Location

Company: TA Technology (Shanghai) Co., Ltd.

Address: No.145, Jintang Rd, Tangzhen Industry Park, Pudong Shanghai, China

City: Shanghai

Post code: 201201

Country: P. R. China

Contact: Xu Kai

Telephone: +86-021-50791141/2/3

Fax: +86-021-50791141/2/3-8000

Website: http://www.ta-shanghai.com

E-mail: xukai@ta-shanghai.com

1.3 Laboratory Environment

| Temperature | Min. = 18°C, Max. = 25 °C | |
|--|--|--|
| Relative humidity | Min. = 30%, Max. = 70% | |
| Ground system resistance | < 0.5 Ω | |
| Ameliant mains in the sales of and formal comple | and in according a could be according to the adender | |

Ambient noise is checked and found very low and in compliance with requirement of standards. Reflection of surrounding objects is minimized and in compliance with requirement of standards.

2 Description of Equipment under Test

3 Maximum conducted output power (measured) and antenna Gain

The numeric gain (G) of the antenna with a gain specified in dB is determined by Numeric gain (G)=10^(antenna gain/10)

| Band | Maximum Conducted Output Power (dBm) | | |
|----------------------|--------------------------------------|---------|--|
| | (dBm) | (mW) | |
| LTE Band 25 | 25.00 | 316.228 | |
| LTE Band 26(Part 22) | 25.00 | 316.228 | |
| LTE Band 26(Part 90) | 25.00 | 316.228 | |

4 Test Result

According to section 1.1310 of FCC 47 CFR Part 1, limits for maximum permissible exposure (MPE) are as following

TABLE 1 – LIMITS FOR MAXIMUN PERMISSIBLE EXPOSURE (MPE)

| Frequency Range | Electric Field | Magnetic Field | Power Density | Averaging Time | | | |
|---|----------------|----------------|---------------|----------------|--|--|--|
| (MHz) | Strength | Strength | | 0.57 100 | | | |
| A-5-000 GaV | (V/m) | (AVm) | (mW/cm2) | (minutes) | | | |
| (A) Limits for Occupational/Controlled Exposures | | | | | | | |
| 0.3-3.0 | 614 | 1.63 | *(100) | 6 | | | |
| 3-30 | 1842/f | 4.89/f | *(900/f2) | 6 | | | |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 | | | |
| 300-1500 | | | f/300 | 6 | | | |
| 1500-100,000 | | | 5 | 6 | | | |
| (B) Limits for General Population/Uncontrolled Exposure | | | | | | | |
| 0.3-1.34 | 614 | 1.63 | *(100) | 30 | | | |
| 1.34-30 | 824/f | 2.19/f | *(180/f2) | 30 | | | |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 | | | |
| 300-1500 | | | f/1500 | 30 | | | |
| 1500-100,000 | | | 1.0 | 30 | | | |

f = frequency in MHz

Note1. Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational / controlled limits apply provided he or she is made aware of the potential for exposure.

Note2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

^{* =} Plane-wave equivalent power density

Report No.: R1907A0407-M1

| The maximum permissible exposure for 300~1500 MHz is f/1500, for 1500~100,000MHz is 1.0.S | The maximum permi | issible exposure for 300 | 0~1500 MHz is f/1500, | for 1500~100,000MHz is 1.0.Sc |
|---|-------------------|--------------------------|-----------------------|-------------------------------|
|---|-------------------|--------------------------|-----------------------|-------------------------------|

| Band | The maximum permissible exposure |
|----------------------|----------------------------------|
| LTE Band 25 | 1.0mW/cm ² |
| LTE Band 26(Part 22) | 0.55mW/cm ² |
| LTE Band 26(Part 90) | 0.55mW/cm ² |

Report No.: R1907A0407-M1 **Power density Limit** Maximum **EIRP** Final Conducted Margin1 Margin2 **Band** limit Margin Output (dB) (mW/cm²) (dBm) (dB) (dBm) (dB) Power (dBm) LTE Band 25 25.000 33.000 8.000 1.000 37.013 12.013 8.000 LTE Band 26(Part 22) 25.000 38.450 13.450 0.550 34.416 9.416 9.416 LTE Band 26(Part 90) 25.000 50.000 25.000 0.550 34.416 9.416 9.416

Note: 1. The Maximum allowed antenna gain per Band should be less than or equal to the **Final Margin** which is the allowable maximum gain value to comply with limits for maximum permissible exposure (MPE).

- 2. The Final Margin is determined and selected to the worst-case of Margin1 and Margin2.
- 3. Margin1=EIRP Limit(dBm)-Maximum Conducted Power (dBm). EIRP limit reference standard part22/part24/part27and part90 for each band, EIRP = ERP + 2.15 (dB).
- 4. Margin2=Power density Limit(dBm)-Maximum Conducted Power (dBm). Power density Limit(dBm): The max. obtained by MPE with 20cm.

IMPORTANT NOTE: To comply with the FCC RF exposure compliance requirements, the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. No change to the antenna or the device is permitted. Any change to the antenna or the device could result in the device exceeding the RF exposure requirements and void user's authority to operate the device.

RF Exposure Calculations:

The following information provides the minimum separation distance for the highest gain antenna provided. This calculation is based on the conducted power, considering maximum power and antenna gain. The formula shown in KDB 447498 D01 is used in the calculation.

Equation from KDB 447498 D01 General RF Exposure Guidance v06 (10/23/2015) is:

S= PG /
$$4 \square R^2$$

Where: S = power density (in appropriate units, e.g. mW/cm²)

P = Time-average maximum tune up procedure (in appropriate units, e.g., mW)

G = the numeric gain of the antenna

R = distance to the center of radiation of the antenna (20 cm = limit for MPE)

| Band | PG (mW) | Test Result (mW/cm ²) | Limit Value (mW/cm²) | Conclusion |
|----------------------|----------|--------------------------------------|-------------------------|------------|
| LTE Band 25 | 1995.262 | 0.397 | 1.000 | Pass |
| LTE Band 26(Part 22) | 2764.394 | 0.550 | 0.550 | Pass |
| LTE Band 26(Part 90) | 2764.394 | 0.550 | 0.550 | Pass |

Note: **R** = 20cm \square = 3.1416

Note: For transmitters, minimum separation distance is 20cm, even if calculations indicate MPE distance is less.
