FCC Part 15.707(a), (b) and (c) - Permissible channels of operation

As described in the RNU4000-TVWS manual and its annexed AFAS manual, TVWS channel for the RNU4000-TVWS base station is set by the AFAS server to which the RNU4000-TVWS unit is connected over an IP network.

AFAS server connects every T hours (less than 24) with Spectrum Bridge (SB) TVWS database and retrieves for each of its related TVWS fixed devices an updated set of available TVWS channels.

This list is set by SB TVWS database.

One of channels of this set will be selected by AFAS for use in the related RNU4000-TVWS base station.

There is no possibility for the RNU4000-TVWS to operate on any other channel which is not listed in the retrieved set.

Thank you,

Tzvi Marcu,
Technical Support Manager

A handwritten signature in black ink, appearing to read "Tzvi Marcu", is written over the printed name and title.
