Attn: Reviewing Engineer  
Office of Engineering and Technology  
Federal Communications Commission

Dear Sir or Madam,

The Cortex VHF System consists of the Cortex Hub and the Cortex Handset. Both Hub and Handset come in two variants.

The M1 is available with LTE cellular data communication for North America (M1-LTE), or UMTS (3G) for Europe and the rest of world (M1-3G). The two models are identical and equivalent in all other respects.

The H1 is available in a tethered variant (H1) or non-tethered (H1P). The H1 has a curly power cord and is supplied with the M1 when sold as a Cortex V1 system. The H1P does not have a power cable but is instead designed to sit in a charging cradle. The H1P is identical and equivalent to the H1 in all other respects and is supplied as an accessory to the Cortex V1 system.

Please contact me directly if you require any further information to regarding this request. I can be contacted via email at [carl@vespermarine.com](mailto:carl@vespermarine.com) or by phone at +64 9 950 4848.

Yours Sincerely,

A handwritten signature in black ink, appearing to read "Carl Omundsen".

Carl Omundsen
