

WARNING:

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) this device may not cause harmful interference and
- 2) this device must accept any interference received, including interference that may cause undesired operation of the device.

The following are the suggested text on SAR information

Specific Absorption Rate (SAR) information

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. This model (FCC ID: YROG222) has also been tested against this SAR limited. The highest SAR value reported under this standard during product certification for use at the ear is 0.713 W/kg.

There are no body worn configurations (e.g. belt-clips, holsters or similar accessories), then body SAR is not required.

Shielded cables must be used with this unit to ensure compliance with the Class B FCC limits, and the shielded cables is marketed with the mobile phone, don't use others.

2. Quick Start

2.1 Icons Help

In the standby interface, the following icons may show up and their description is as follows:

Icons	Discription	Icons	Discription
	Indicate the intensity of network signal.		Showing the battery capacity.
	Silent mode is actived.		Vibrate mode is actived.
	Long ring mode is actived.		High ring and vibrate mode
	New SMS.		New MMS.
	Missed call.		Alarm clock is set and activated.
	Bluetooth is opened.		

2.2 Keys description

1. Number keys:

Input numbers and characters; customize number keys 1-2 as the shortcuts of voice mail; customize number keys 3-9 as the shortcuts of quick dial.

2. Right soft key:

Execute the functions displayed in lower right corner of the screen. And you can use it to delete the anterior letter near the cursor which you have input in the message or exit the interface of editing when there is no letter in the message.

3. Dial key

There are two dial key. They are used to make a phone call by SIM1 or SIM2 and answer the telephone for SIM1 or SIM2; in standby state, adjust the record of the Dialed calls, the Received calls and the Missed calls.

4. Hang_Up key:

It is used to refuse to the telephone; generally press this key to return to standby state under the other condition. Press and hold this key to open/close the mobile phone.

5. Left/Right key:

Move cursor to the left or right while editing; in standby state, press the Left key to access [Profiles] and press the Right key to access [Write message]; in certain submenus, press the Left key to access selected menu and press the Right key to return to previous menu.

6. Up/Down key:

Press to browse names, telephone numbers, short messages, submenus and so on; move cursor up or down while editing; in standby state, press the Up key to access [Camera] and press the down key to access [Alarm].

7. OK key:

In Standby state, press it to enter the main menu or press and hold it to open or close the torch; otherwise pressing it to access the menu you have chosen.

8. * key:

Input special symbols; in standby state, press and hold this key to switch among *, +, P and W.

9. # key:

Press this key to input # or switch the input methods; in standby state, press and hold this key to switch between Silent mode and the General profile.

10. Audio key:

It is a shortcut key to enter the audio player directly when the phone is in the standby state.

Note: In this manual, press a key means to press the key and release; press and hold a key means to press the key and hold for no less than 2 seconds.

2.3 Install SIM card and battery

- Hold down the switch key at the top of the phone about three seconds;
- Push down and remove the battery cover;

- Remove the battery;
- Fit on the SIM1 (based on the slot with the sign of "SIM1"). When you are installing the SIM card, please make the contact dot down (make sure the direction of the gap on the SIM card is consistent with the slot) and then push the SIM card inside the slot until the full match (the installation method of SIM2 is similar to SIM1).
- Make the metal contact part of the battery aim at the contact pad position and fit on it, and then install the battery cover.

 Explain:

Function description in this manual is based on inserting two SIM cards and selecting [Settings → Call setup → Dual-SIM → Standby mode→Dual SIM dual standby]. If you only insert a single card or not select the Dual SIM open, the interface and the Option is not the same as the descriptions in the manual.

2.4 Install memory card

This phone supports dual T-flash cards: one is near the SIM card slots, which is used as U disk; the other one is at the right side of the phone, which is named memory card.

Insert the memory card and then you can put up browsing, copying and other operations to the files on the memory card through the phone. You can

expand the phone memory with the memory card.

■ The card which is near the SIM card slots:

- Remove the back cover and battery;
- Make the side of Memory card which have the golden touch down, push the card with the narrow end first into the slot until it is fully consistent with the slot to complete the installation.

■ The card which is at the right side of the phone:

- Open the plastic cover which is marked with T-FLASH;
- Insert the T-flash card in the slot directly until it is fully consistent with the slot to complete the installation (please notice the direction of the T-flash card).
- Close the plastic cover.

Warning:

Do not insert or pull the memory card fast and frequently, to avoid damage to the memory card.

2.5 Battery Charging

Use the travel charger

- Insert the battery into the phone correctly;
- Open the rubber cover underneath the phone, make the side which has arrow towards the screen, insert the charger plug into the charging interface, and then connect the travel charger to standard power outlet.
- After insert the charger, the battery strength icon in upper right corner of the screen starts scrolling that charging has begun. When the battery is fully charged, the icon will stop scrolling and the battery symbol will display full grid on the screen.
- Charging is completed, first disconnect the charger with standard electrical outlet and then disconnect the phone and charger.

Attention:

1. Please use the standard battery and charger, or it may bring explosion.
2. If the battery is completely discharged, the battery icon should be appeared after charging 2 to 3 minutes. Generally based on the current state of the phone (if it is power on or be calling, etc.), the charging time is different for 2 to 5 hours.
3. Please charge your battery through charger and avoid using the USB cable to charge as much as possible.

4. To ensure the new battery achieving the optimal performance, please make the battery complete the battery charge and discharge cycles for two to three times. Several initial charge for new battery, please charge more than 10 hours continuously.

2.6 Switching on/off

2.6.1 Switching on

- Press the Hung_Up key about three seconds to switch on.

2.6.2 Switching off

- Press the Hung_Up key about three seconds to switch off.

Warning:

When you are at the place where the use of phone is prohibited or when it may cause interference and dangerous, do not open your phone and ensure it is not open the function of timer switch.

2.7 Use shortcut keys

In standby state, press some button directly allows you to access the phone functions quickly, which used frequently.

Button	Operation	Function
--------	-----------	----------

Number keys of 1 to 2	Press and hold	Get into the voice mail of SIM1 or SIM2.
Number keys of 3 to 9	Press and hold	Get into the appropriate speed dial.

3. Call functions

3.1 Make a phone call

3.1.1 Dial Directly

- In the standby state, enter the area code and the phone number.
- Press the Dial key of SIM1 to make a phone call by SIM1, press the Dial key of SIM2 to make a phone call by SIM2.

Other 3	Show all contacts whose group set as	

	"Other 3".	
--	------------	--

The order of contact is in accordance with unnamed, special symbols, numbers, letters (if it is Chinese name, you can select the names by the corresponding Chinese phonetic alphabet).

5.2 Quick Search

In the standby state, select [Contacts] and enter the contacts list for viewing. Carry out searching location through the keys on the keyboard directly (it supports fuzzy search).

Example: search "李四"

Enter "57" can find it, for the corresponding phonetic of "李" is "l" and the corresponding phonetic of "四" is "s".

Example: search “sam”

The letter of "sam" is corresponded to the number key of "726", so you just need press the "726" key to find the name.

Example: look for names, at the beginning of which is ":", "?".

Enter "1" directly to look for it.

Select the record you have selected and enter [Option]:

Option	Function
New	Create information for new contact.
Contacts search	Find the details of the required number.
Write message	Edit and sent SMS or MMS to the current number.

Dial up	Call the current number. You can select dial directly or make an IP dial.	
Send vCard	Sent this record via SMS or Bluetooth.	
Delete	Delete the current record.	
Mark	Mark the current record or mark all the records.	
Copy	Copy the record to SIM1 (SIM2), U disk or memory card.	
Others	Speed dial setting	Add this number to the list of speed dial. After setting the function of speed dial, press one of the keys from 3 to 9 in standby state and then you can dial the speed dial number corresponding to the number key directly.
	Own number	Set the current number as my phone numbers. Whether support the function and the number of storage depends on your SIM card.
	Memory query	Query the memory state of Contacts for SIM1, SIM2 and phone.
	Single / double line display	Recorded information can be displayed in one-line or two-line.

When the members of groups (except "All", "SIM1", "SIM2") is not empty, it can also offer [Transfer], [Rename] and other operations by pressing [Option].

5.3 Add new contact

- **Phone:** all records stored in phone except contacts stored in SIM1 and SIM2. You can select the corresponding group and set more than one number. This feature allows you to input your name, phone

number, home phone, business phone and so on. You can choose caller picture and caller ring tone for the current contact.

- **SIM1 / SIM2:** add contacts to the SIM1 or SIM2 and it can store only one number to each name.

 Note:

The name of new contact can be empty but the number of it can not be empty.

6. Internet

The Internet is the application platform which combines the wireless communications and Internet and it enables you to get rich application by phone, such as Internet information resources and e-commerce.

In the standby state, press the middle key to enter the main menu and then select "Internet."

 Notice:

1. Your Internet service provider may not support some functions, so please make sure your SIM card can support and have opened the Internet feature in order to ensure the normal operation of the browser.
2. If you browse the web, you need to charge fees related to traffic.

6.1 URL

Input the web site you need to browse.

China's largest free wireless Internet portal lets you know the world without leaving home.

6.2 Homepage

Select this to connect the pre-set homepage or the default homepage

directly.

6.3 Bookmarks

The bookmark is blank as default and you are free to edit it. Commonly used website can be saved in the bookmarks with a simple name tag. Select one of the bookmarks and then you can connect to the current web site directly. The setting operation is as follows:

Add bookmark: Select it, input the address and name for the bookmark and then select save.

6.4 Histories

Record the web sites you have visited previously.

6.5 Snapshot

Enter it and you can browse a snapshot which you have saved in.

6.6 WAP settings

6.6.1 Browser settings

- Clear cache: In order to avoid congestion and improve the speed of web browsing, please clear the cache periodically.
- Network account SIM1/SIM2: Select the account for SIM1 or SIM2.
- Image download: activate the feature and then the image of the download page can display.

12.2.6 Power management

Show the power of the battery.

12.2.7 Restore factory settings

Reset the parameter value of the mobile phone, with which can make your phone reset to default settings. Please enter the privacy password (the initial password is 1234) to restore factory settings.

12.3 2D setting

The phone has the feature of 2D sensor, with which you can achieve the switching function to change music, wallpaper or picture.

12.4 Display

12.4.1 Wallpaper settings

Choose picture to be used as wallpaper for your phone.

12.4.2 Standby style

Choose the style of your standby interface. The phone offers two default styles: the basic style and smart style.

12.4.3 Set idle display

Select the projects displayed in the standby state, including the time and date, operators, agenda and individual words. You can edit the individual words.

12.4.4 Contrast

Set the brightness of the screen backlight.

12.4.5 Backlight

Select the time for screen backlight, including "always open", "30 seconds", "20 seconds", "15 seconds", "10 seconds" and "5 seconds".

12.4.6 Keypad light

Select time for button backlight, including "20 seconds", "10 seconds", "5 seconds", and "night mode" and "off".

12.4.7 Animation effect

Set the animation effect for powering on or powering off.

12.5 Security

You can use the PIN code, PIN2 code, set the password of powering on and set the security feature to protect the security for information.

12.5.1 PIN

PIN code (PIN1) is the personal identify number for SIM card. If the user does not change the original password, the password supplied by the operator is 1234 or 0000. If you activate the PIN code for powering on, then 4-digit PIN code is necessary to enter after each start. The PIN code can be amended, which used to protect your SIM card is not used by others.

Please note that if the PIN code input wrong for three times continuously, the phone card will lock automatically and prompts you to enter PUK code to unlock it, at which time you are close to the brink of danger. Therefore, if you modify the PIN code by yourself, make sure remember it in mind.

PUK code (PUK1) is ordered by the 8-bit numbers and the user can not change it. When the PIN code is locked and when the phone prompt you to enter the PUK code, do not act rashly, because the opportunities for inputting the PUK code is only 10 times and if you enter the wrong words

for 10 times continuously, the SIM card will be locked permanently, that means it is scrapped. The PUK code for some the SIM card is incidental with the SIM card, such as China Mobile's Shenzhouxing, etc, while the others need the network operators to obtain the PIN code. If your PUK code is locked and you do not know it, do not random input. The correct way is to call the hotline operators the SIM card belongs to. After verifying the simple user data, you can obtain the PUK code to unlock the phone. This service is free of charge.

Warning:

Please use this feature with caution and if you forget the PUK password, please contact the network operator. If 10 consecutive PUK code be inputted in error, the SIM card will be scrapped.

After selecting the SIM card type you want to set, you can carry on the operations as follows:

- ✧ Open: Activate it and then you need to enter the PIN code each time you open phone.
- ✧ Review: You must open the PIN code before you change the PIN code.
- ✧ Close: Close the PIN code must" enter the correct PIN code.

12.5.2 PIN2

PIN2 code (PersonalIdentificationNumber2) is entered when you enter a particular function (such as setting a fixed number, set the call billing, etc.).

PIN2 code is entered when a particular feature is used, such as the elimination for call cost information, set the unit for currency, to achieve cost limit function, limit to dial and so on. The PIN2 code provided by the supplier as another SIM card password, please contact your network provider to access PIN2 code.

When entered the wrong PIN2 code for 3 times continuously, the phone card will be locked, then you must enter the correct code to unlock PUK2.

Warning:

Please use this feature with caution, if 10 consecutive PUK2 code input is error, SIM card will be scrapped.

12.5.3 Privacy protect

This function can protect your phone's specific features to prevent unauthorized viewing by others. When activate password protection feature for call records, messages, camera, Contacts, document management, e-book, calendar, U disk, etc, you need enter the correct password after entry the corresponding main menu or submenus. The default password is "1234", you can also modify the password.

12.5.4 Auto key

You can select 5 seconds, 15 seconds, 30 seconds, 1 minute or 5 minutes to open the automatic keylock function; you can also select [Close] to close this function. When this feature is turned on, the automatic keyboard lock feature is started to prevent misuse.

- The operation of locking the keyboard manually is: In the standby state, press the Left soft key and then press the * key.
- The operation of unlocking the keyboard manually is: In the interface of keyboard has been locked, press the Left soft key and then press the * key.

12.5.5 Red key locks keypad

You can choose to enable or disable this feature. Open this feature, you can just press the Hung_Up key to turn off the backlight and lock the keyboard automatically when the phone screen is bright.

12.5.6 Power-on PWD

This function need set a password (the password length is 4-8) when you use it for the first time. When you start the feature, each time requires a password when you open you phone. You can also change the boot

password or turn off this function.

Description:

There is no limit for the number of inputting the power-on password.

Please remember this password in your heart, or if you forget it, it will not be turned on successfully for the next time.

12.5.7 Theft proof

Theft proof feature (MSD) is also known as mobile dog. Its main function is to collect the current CELL ID (mean: cell ID) and other information sent to the pre-specified phone at the time when the phone is used illegally. To a certain time or after certain times of making the phone power on, this function will prevent others from re-booting to use this phone.

The theft proof function is off by default, and you need change your password before activating it. After activating it, you need enter a password to carry on the operations for startpping, shutdowning or changing your password. The password has the six bits. In addition to a password, a pre-designated phone number is also required to enter (cell phone stolen, the mobile phone number to receive notification messages) to open this function.

When you activate this function, the mobile phone will store the SIM card's IMSI number. As this number is only, when another SIM card is

inserted, there will be a prompt box appeared to ask you to input the theft proof password if the phone is powering on. If you enter the wrong password for three times, or to opt out of interface, the phone will take it as illegal use, and gives an prompt of illegal use, and then the phone will read the CELL ID, LAC (means: location area code, used to identify the different location of areas), MCC (means: Country Code for Mobile. "460" is the MCC of China), MNC, MCN and other information, to send text messages to pre-designated phone number. Legitimate users can get this message to report to the public security organs, with which can be used to check the illegal use of the phone (including the location of the region when the mobile phone is used, communication records, etc.).

If sending fails or is on at this time, the sending text messages will be sent the next minute, until send them successfully. Over 24 hours in the standby state or reboot the phone, the phone will send a text message to your pre-specified mobile phone number again. Send text messages successfully to a certain number of times (15 times), any use of an illegal SIM card can not use the machine, the phone will shut down automatically.

Note:

If your phone is stolen, please report to the public security organs, but it can not ensure that the phone must be able to recover, so please keep your personal belongings carefully.

If the phone takes this SIM card as illegal card and you want to open the anti-theft function, the phone will prompt you have no right to use, it means you can not use the security features of the corresponding menu under Theft proof. If the phone is switched on using another card and the password is entered correctly, the message count for sending will start counting from 0 and the phone will prompt whether binding. Select binding, the phone will update and use this SIM's IMSI number information, then this card is treated as the specified card of the phone.

- Activate: To enable this feature, you must first set a password, if the password is not set, the phone prompts that "Please change your password". You can get into the [Change Password] menu to set the security password and then open this function. The security password and notification phone number are requested to enter (to receive the illegal use of the mobile phone SIM card to send on this illegal SIM card information) to open it. After these steps, anti-theft feature is activated.
- Deactivate: Turn off anti-theft feature. You must first enter the security code to close it.
- Modify PWD: Modify the security password.

Warning:

Please use this carefully. If you forgot your password, you can not use the phone.

12.6 Profiles

Through this menu, you can set different profiles to suit different

environments. The phone has 5 profiles: Standard, Silent, Vibrate, Low ring and High ring and vibrate mode. Each model has the default value, and you can set up according to your need.

Press the left soft key to select "Option", the menus is as follows:

- **Activate:** Start the selected profile.
- **Settings:** You can set all kinds of effects to your own need.
 - ✧ **Ring set:** You can set the ring tone about incoming calls and messages.
 - ✧ **Ajust volume:** You can set the volume of ringtone about incoming call, new message, communicate, alarm and power on/off. Please press the left / right key or the up / down key to adjust the volume.
 - ✧ **Call alert:** Set the alert mode for incoming calls.
 - ✧ **Message alert:** Set the alert mode for new messages.
 - ✧ **Alarm remind:** Set the alert mode for alarm reminding.
 - ✧ **Keypad tones:** Set the sound effect of key tone as silent, ring 1 or ring 2.
 - ✧ **Battery low alert:** You can set whether to open the low voltage warning tone.
 - ✧ **Power on / off tone:** You can open or close the ringtone when the phone is switched on / off.
- **Rename:** Modify the name of the profiles.
- **Enhance ring:** Open or close the function fo enhancing sound.

12.7 Link

12.7.1 Bluetooth

- **Open /Close bluetooth:** You can open or close your bluetooth device.
- **Bluetooth visibility:** Set to show or hide the Bluetooth device of your phone. When set to hide it, the external phone can not search for your Bluetooth device even you Bluetooth have been turned on.
- **Paired device:** Search for nearby Bluetooth devices which have enabled.
- **Set shared files**
 - ✧ **Directory sharing authority:** It can be set to "Full control" or "Read only".
 - ✧ **Sharing directory:** Select the "memery card only" to share the memory card to another person; select "Select Directory" to share the custom directory to others.
- **My Bluetooth name:** The display name of your Bluetooth when other people's devices have found your device after your Bluetooth is turned on.
- **Bluetooth file location:** Select "Only memory card" to store the received files via Bluetooth to the memory card.
- **Help:** Provides help information related to Bluetooth.

12.7.2 Network account

You can choose the network account according by yourself. China Mobile GPRS, China Mobile MMS and China Unicom WAP are the three default account in your phone and you can not delete or edit these three accounts. You can also add your own network accounts.

In the interface of Internet, press [Options] can carry on the following operations:

- **Build a new link setting:** Create new accounts through this menu.
 - ✧ **Security connect setting:** Open or close the function of security by yourself.
 - ✧ **User name:** Free to edit the user name for network.
 - ✧ **Password:** Set the connection password.
 - ✧ **APN:** Set the name of network access point.
 - ✧ **Gateway IP address:** Set the address of the network IP.
 - ✧ **Port:** Set the network port.
 - ✧ **Rename:** Free to edit the account name.
 - ✧ **Set homepage:** Set the homepage address.
 - ✧ **Advanced settings:** You can set the DNS address and the network type.
- **Add a new link setting list** You can choose to add the default Internet accounts more than one.
- **Search:** Search for the registered network configuration in the nearby area, and they can be used directly after searching.

- **Delete a setting list:** Delete the selected Internet account.
- **Edit:** Edit the selected Internet account.

12.8 Torch

Open or close the torch; view the help imformation.

Long press OK key in standby state to open or close the torch.

13. Additional features

13.1 The function of U disk

Follow these steps to use the U disk:

- Before use, make sure the system of your computer is Windows2000 or WindowsXP.
- Connect the computer with your phone by USB data cable provided with the phone properly.
- After the phone is connected with the computer, select [U Disk] in the phone. When the computer identifies the U disk successfully, the status bar will appear a small green icon of the USB device in the lower right corner of the phone.
- Open "My Computer" and you can see the "Removable Disk", then the operation to U disk can be carried out.
- The multimedia files, which you browse through the mobile phone, must be stored in the specified directory to identify, or it will be not read or play through the phone if they are stored on the other directory. For example the image files only in the "Photos" directory can be readed through the phone.

Note:

1. When the the phone is used in the state of U disk, you can see some default application files, and once you remove them, the default files will be lost permanently.
2. After using the U disk, at first remove the U disk from the computer equipment and get the notice from system, and then you can pull U disk safely, otherwise it will make data loss easily, even lead to the damage of U disk file system.
3. To support USB1.1.

14. Phone maintenance

Mobile phone is an electronic product with high-precision, please maintain it carefully. The following suggestions can help you to maintain phone and extend the lifespan of it:

- The phone and its accessories should be placed out of the reach of children.
- Keep the device dry. Rain, humidity or moisture will corrode the circuit board. If the phone is flooded accidentally, you should remove the battery promptly and send it to the local authorized service center for processing immediately.
- Do not place your phone in places which are full of dust, or it may affect the normal use of your phone.
- LCD display is the part of phone which can be damaged easily, so you should avoid dropping the mobile phone onto the ground or making the phone vibrating strongly; prohibit using sharp objects to touch the screen.
- Do not place the phone where the temperature is too high. High temperatures can shorten the life of electronic devices, damage batteries, and warp or melt plastic shell phone.
- Do not place the phone where the temperature is too low. Otherwise, when the temperature of the phone raise to normal temperature, moisture will be generated internally and it could damage the device of electronic circuit boards.

- Do not drop, knock or shake the phone severely, so as not to damage the internal circuit boards and precision mobile structure.
- Do not use chemicals, cleaning solvents or strong detergents to clean the device. You need use the soft cloth soaked in soapy water to scrub it gently.
- Do not use the pigment to paint your phone. It can avoid the moving parts be stuck, with which can affect the proper operation of your phone.
- Please use clean soft cloth to clean the lens, such as camera lens.
- Only the supplied or designated antenna can be used to replace the old antenna. The use of unauthorized antennas, phone accessories or modification could damage the device and may violate correlative regulations about radio devices.

15. Eliminate the Simple Trouble

In the course of using the phone, please consult the following table to guide the troubleshooting if the unusual circumstances happen; if the trouble still unresolved, please connect with the designated service center.

15.1 Phone can not switch on

Possible reasons	Solution
The time of holding down the Hung_Up key is short.	Press the Hung_Up key more than three seconds.
The electricity of the battery runs out.	Please charge it.
The installation of battery is incorrect.	Please install the battery correctly.
Illegal use leads the phone can not turn on.	Please enter the correct password.

15.2 Phone be shut down automatically

Possible reasons	Solution
Whether the function of Schedule power on/off is enabled.	If you do not need the function of Schedule power on/off, please cancel it.
The electricity of the battery runs out.	Please charge it.

The battery loose.	Please install the battery correctly following the battery installation method in the instructions.
Illegal use leads the phone can not turn on.	Please enter the correct password.

15.3 PIN/PUK Lock

Possible reasons	Solution
PIN (Personal Identification Number) / PUK code (unlock PIN) entered incorrectly.	Please enter the correct password

Note:

1. If you enter the wrong PIN code 3 times continuously, the SIM card and phone's many features will be locked.
2. Can not guarantee the correct PIN and PUK code, please contact the operator or retailer.

15.4 Poor quality for calling

Possible reasons	Solution
The current signal strength is saltating.	You may be in high-speed moving state (by train or car, etc.). You can check the signal strength and select the place with high signal strength to ensure call quality.
In the reception with poor signal.	Please go to the open space area.

15.5 Can not receive calls

Possible reasons	Solution
Open the function of Call divert.	Please cancel this function according to your need.
Open the function of Call barring.	Please cancel this function according to your need.

15.6 Can not make calls

Possible reasons	Solution
The phone is turned off.	Please turn on it.
Not in the network service area.	Please make sure the network is in normal service state.
Not insert the appropriate SIM card properly.	Please make sure your SIM card can work properly.
Open the function of Call barring.	Please cancel this function according to your need.
Lock the keyboard automatically.	Please press the left soft key and the # key to unlock the keypad.

15.7 Call volume is small

Possible reasons	Solution
The call volume is set too low.	Please adjust call volume loud.

15.8 The opposing party can not hear your voice

Possible reasons	Solution
The microphone is too far away from the sound source.	Please make the microphone near your mouth.

15.9 Phone does not ring with incoming call

Possible reasons	Solution
Incoming call alert is set to mute.	Please reset the prompt for ring.
Ring volume is set too low.	Increase the volume tip.
Open the function of Call barring.	Please cancel this function according to your need.

15.10 Battery can not charge

Possible reasons	Solution
Battery runs out and be placed too long.	Please charge it in time after the prompt of low power is showed.
The connection between the battery and the phone is bad.	Please ensure that the battery is installed properly.
Poor connection between the charger and the phone.	Please connect the charger with the interface of your phone, and then the charging icon appears in the screen of the phone.
Battery or charger is damaged.	Please connect with our designated contact point for warranty.
Ambient temperature is too low or too high.	Please ensure that the device is charging in normal temperature.

15.11 Reveal no network

Possible reasons	Solution
SIM card is not installed properly.	Please install the SIM card properly according to the installation method in instructions.
SIM card and the contact of phone have impurity.	Please ensure that they are clean.
SIM card is invalid.	Please check whether the SIM card is expired.
Network environment is in the weak field area.	Please go to the place where the network signal for phone is strong.

15.12 Phone can not detect memory

Possible reasons	Solution
Insert the memory card incorrectly.	Please insert the memory card in right way according to the instructions.
Memory card is damaged.	Please replace the memory card.

15.13 Storage space is not enough

Possible reasons	Solution
The MMS takes up too much storage space.	Please delete some MMS you do not need to free space.
The history record in browser takes up too much storage space.	Please select [Communications → browser → WAP → Browser settings → Clear cache] to free up space.

15.14 The Option for PC Camera can not be achieved

Possible reasons	Solution
The "PC Camera" menu does not appear in the phone after the phone connected to the computer.	<ol style="list-style-type: none">1. Make sure the USB Interface is intact in the computer.2. Make sure you are using the connection cable provided by the retailers correctly.

16. Safety Information

16.1 The environment for using

In order to ensure your rational use about the phone and avoid the impact on you and the environment, please remember to comply with the rules and regulations when you use the phone anywhere.

Please turn off your cell phone and comply with all safety signs and instructions in any place where may lead to explosion, such as gas stations, fuel depots, chemical plants or other place with blasting operations. It may cause explosion and personal injury if you disobey the relevant requirements.

The use of phone on airplanes would interfere with the operations of aircraft flight and bring dangerous. Therefore, please ensure to turn off your phone before boarding, and make sure the phone is in the state of turning off or in the Flight mode throughout the flight (this phone has the function of Schedule power on/off, so please make sure you have turn off this feature in the entire flight process).

When driving, please place the phone on the special bracket but not put it in the seat, or in the place where the phone can slide with slam or the brake of the car. In order to ensure safe driving and avoid traffic accidents, please do not use the phone during driving. If you must use the phone, make sure stop the car first and then use the phone.

To avoid the explosion due to the temperature increase of the phone battery, please make the phone far away from high temperature.

16.2 Medical equipment

Please turn off your phone when you close to the electronic medical equipment, with the express provision for the shutdown of phone (such as pacemakers, hearing aids and other medical equipment). Most medical equipment can shield the RF signals of phones, but there are some electronic devices do not have this feature. If you doubt or can not ensure whether the medical equipments can shield the RF signals, please consult your doctor or the medical equipment manufacturers.

16.2.1 Pacemaker

Pacemaker manufacturers recommend that maintain the distance between your phone and the pacemaker at least about 6 inches (15.3cm), so as not to interfere the pacemakers with phones.

To persons wearing pacemakers:

When your phone is switched on, please ensure that maintain the distance between the phone and the pacemaker at least 6 inches (or 15.3cm).

Do not place your phone in a breast pocket.

Please use the ear which is not in the same side with the pacemaker.

Note:

If you suspect the interference is exiting, please switch off your phone immediately and ask the medical staff timely.

16.2.2 Hearing aids

Phones may cause some interference to hearing aids, so please contact the manufacturer immediately if the interference is exited.

16.2.3 Emergency Call

As the phone use the radio signals, terrestrial communication networks and personal setting function like other mobile phones, it can not guarantee that your phone connections can succeed in all conditions, please do not just rely on mobile phones to achieve important communications (such as medical first aid and other matters).

Emergency call

If your phone is turned off, please turn on it and check the network signal is strong enough.

- Enter the local emergency number correctly (such as 120 which is the emergency center). Different regions have different emergency numbers.
- Press the Dial key to call.

Note:

When make an emergency call, please provide all the important information as accurately as possible. The phone may be the only tool for communication at this point, so please do not end the call without permission.

16.3 Accessing password

The password protection for mobile phone and SIM cards are available to prevent they are used illegally.

16.3.1 Password of power-on

With this function, you can prevent the phone be used by others without your consent. The original password is set when you use this feature for the first time. Please change the password of power-on as soon as possible after you use the phone and make sure it is confidential.

16.3.2 PIN

It is the personal identification code, which is the password to protect the SIM card and can prevent SIM cards be used by others without your consent. SIM card and PIN code are usually along with providing. After enabling the password of power-on, you need to enter the password to use

the phone normally .

Note:

If you input false PIN code for 3 times continuously, SIM card will be locked. You must input PUK code to unlock it (If you do not have the PUK code, please contact your network or retail operator to get the PUK code. Please do not input any other invalid content.)

16.3.3 PIN2

PIN2 is the password which used to realize the special features of the SIM card. If the network operator provides this number for you, you are required to input it to enter some features (such as unit, using the fixed dialing, etc.). Usually the PIK2 code supplied with the SIM card. If you input false PIN2 code for 3 times continuously, PIN2 are locked and then the PUK2 code is required to unlock it.

16.3.4 PUK

Unlock the PIN2 code. Usually the PUK2 code is supplied with the SIM card, the PUK2 code can change the locked PIN2 code. If you input false PUK2 code for ten times continuously, you will not be able to use this SIM card, please apply for a new card to your network operator. PUK2 code cannot be changed, so if you lost it, please contact your service provider.

16.4 Precautions for Battery Charging

The mobile phone uses the lithium-ion battery to provide energy, many things can affect the time of standby and call time, such as the system environment, phone setup and so on.

Please use the standard battery and charger supplied by our company. Damage can be caused if you use the battery or charger which is not approved by our company and our company will not be responsible for the consequences.

The power bar in the battery icon on the phone screen starts scrolling if the phone is powered on.

NOTE:

1. If the battery is completely discharged, the battery icon should appear after 2 to 3 minutes after charging. Generally, the time for charging is 2 to 5 hours, based on the current state of the phone (if it is switched on or used to call, etc.) is different.
2. To make sure the new battery can get to the prime performance, please finish the period of charging and discharging the battery for two to three times. When you charge for new battery, please charge more than 10 hours continuous for the first few times.

When mobile phone is in charging, please do not use the wet hand to contact the battery or charger to avoid dangerous. When your phone is charging, you'd better not use it. After the charging is finished, the battery icon will stop scrolling, and you can disconnect the phone from the interface of the charger adapter.

16.5 Cautions for using battery

The use circumstance of battery is decided by the network, phone settings and the use circumstance of the phone, for example, the capacity of 1200 mAh lithium-ion battery can support calling for 6-8 hours can used about 150-240 hours if the phone is in the standby state.

Please do not use any damaged batteries to charge.

When you use cell phone near the base station of cellular network, the consumption of battery is small. So the signal strength of cellular network and the parameters set by the network operator affect the call time and the standby time largely.

The charging time depends on the remaining capacity and the type of battery, and the model of charger. When the battery life shortted obviously, we recommend that you replace the battery to ensure the performance of your phone.

Please use the batteries and charger provided by our company, otherwise it may cause exploding. Please cut off the power when you do not use charger. Do not charge the battery with the charger more than one week, or it will reduce the

lifetime of the battery when you charge excessively.

Don't reverse the polarity of the battery between anode and cathode.

Do not put the mobile phone at places with high or low temperature; otherwise it may reduce the capacity and the lifetime of the battery. Please use the battery under room temperature as much as possible.

Do not make the battery in short circuit, otherwise it will damage the battery core or the internal protection circuit of the battery. When you put battery in the pocket or bag, the metal items (such as coins, pin or pen, etc.) may make the battery be in short circuit, so please place battery separately and properly.

Do not burn battery or dispose it as ordinary garbage. Please abide the local environmental policy to avoid the risk of life and the damage to the environment. You should process and recycle the battery in time.

If the water runs into the phone, the battery or other charging device, do not put it in any heating equipment (such as a dryer, microwave etc.) for drying. Cell phone or other products may cause fault, even it will cause fire, expand or explode to the cell phone, the battery or other charging device.

Please follow the relevant instructions to dispose of the useless batteries.

To any direct or indirect damage caused by the error actions which are described above, our company does not assume any responsibility.

16.6 Caution of Using Accessories

Please put all accessories (such as the SIM card, memory card, battery, etc.) out of children's reach to avoid children getting hurt.

Before you remove the battery, please make sure turn off the phone and disconnect the connection between the phone and charger.

Because the accessories of mobile phone are not waterproof, please keep all the accessories drying.

When you cut off the power of any accessories, you should pull the plug properly and don't pull the power cord.

If the phone, the battery or the charger does not run properly, please contact the nearest maintenance department with qualified for maintenance.

16.7 Other security imformations

When the phone is not in use, we recommend that you turn off the phone and remove the battery, to conserve energy and eliminate cell phone radiation.

When using the phone, please do not adjust the volume too large to avoid hearing damage.

Non-professionals can not dismantle the mobile phone terminals and battery.

We recommend that you try not to use the holster with magnet button to avoid the interfere which is brought from the magnets to the switch signal of the phone and the LCD screen button may be crushed; the phone case of

plastic material will lead poor volatilization of the water vapor, with which can corrupt the inside components of the phone and lead to the oxidation and fade of the shell.
