Re: Response to TCB Requests for Information for FCC ID: YVAUG1000CA - JOB #: 1403UC13

Dear Sir:

The 433 MHz receiver is an integral part of the prospective, certified device but is subject to verification. The device takes data from the 433 MHz fixed frequency receiver and transmits the data over the 902 to 928 MHz frequency band. The test report has been updated to cite that data associated with the device's receive function has been provided voluntarily. The page numbers affected in the test report are 4 and 20. The Form 731 has also been updated accordingly.

Sincerely,

President
