

Description of wii remote working principle:

This product is an external control device for wii console. You can cooperate and experience the games after connecting it with the console through Bluetooth technique. How to connect: press slightly the red frequency key beside the remote battery once, then press the red frequency key on the console once (the console must be open), now the remote is in the launch status and the console is in the receiving status, then the console will connect with the remote in several minutes. The power of the remote is supplied by one pair AA batteries(1.5V*2), passing one pair constant Voltage, and then through 2301 DC-DC IC, the Voltage increases to DC3.3V. The Bluetooth module is supplied by this 3.3V directly and work. The Bluetooth with built in MCU controls the Motor, speaker, transducer, lens module, 13 keys (the keys are POWER,UP,DOWN,LEFT,RIGHT,A,-,HOME,+,1,2,B,SYNC) and 4 indicators which are for gamers' controlling (1.2.3.4) directly,. If you want to cut off the remote, just press the power key for 3 minutes and the wii console will turn off automatically at the same time, or take out the battery in the remote directly.
