DOCUMENT PURPOSE

This document describes how to configure DP760 DECT Repeater via Web GUI menu. The intended audiences of this document are VOIP administrators.

Please visit <http://www.grandstream.com/support> to download the latest “DP760 User Manual”.

This guide covers following topics:

- [Product Overview](#)
- [Getting Started](#)
- [Configuration Guide](#)
- [Upgrading And Provisioning](#)
- [Restore Factory Default Settings](#)

CHANGE LOG

This section documents significant changes from previous versions of administration guide for DP760. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

Firmware Version 1.0.3.7

- This is the initial version for DP760.

GUI INTERFACE EXAMPLES

WELCOME

The DP760 is a powerful DECT Repeater that auto associates to Grandstream's DP750 Base Station to offer extended mobility to business and residential users. It extends an additional range of 300 meters outdoors and 50 meters indoors to give users the freedom to move around their work or home space, delivering efficient flexibility. This DECT Repeater relays up to 2 concurrent HD calls, or 1 HD call in daisy chain. The Ethernet connection provides PoE for convenient installation and variety of remote features including provisioning, status monitoring and firmware upgrade. When paired with Grandstream's DP750 DECT VoIP base station and DP720 handsets, the DP760 is a powerful DECT Repeater that allows any business or residential user to create a cordless VoIP solution of extended coverage.

PRODUCT OVERVIEW

Feature Highlights

The following table contains the major features of the DP760:

Table 1: DP760 Features at a Glance

| | |
|---|--|
| DP760  | <ul style="list-style-type: none"> • 5 Stations in star. • 2 Stations cascaded in daisy chain. • 2 Concurrent HD calls / 1 HD call in Daisy Chain. • PoE power support. • 300m range outdoor / 50m range indoor. • Auto association in star or daisy chain per optimal coverage. |
|---|--|

DP760 Technical Specifications

The following table resumes all technical specifications including the protocols / standards supported, voice codecs, telephony features, languages and upgrade/provisioning settings for DP760 DECT Repeater.

Table 2: DP760 Technical Specifications

| | |
|----------------------------|--|
| Air Interface | Telephony standards: <ul style="list-style-type: none"> ▪ DECT EN 301 406:2001 ▪ DECT GAP TBR22 EN 300 444:2001 ▪ DECT DECT EN 300 700 ▪ CAT-iq TS 102 527 Frequency bands: <ul style="list-style-type: none"> ▪ 1880 – 1900 MHz (Europe), 1920 – 1930 MHz (US) ▪ 1910 – 1920 MHz (Brazil), 1786 – 1792 MHz (Korea pending) ▪ 1893 – 1906 MHz (Japan pending) Number of channels: 10 (Europe), 5 (US, Brazil or Japan), 3 (Korea). Range: up to 300 meters outdoor and 50 meters indoor. |
| Peripherals | 5 LED indicators: Power, Network, Association, Activity, DECT Reset button, Pairing/Paging button One 10/100 Mbps auto-sensing Ethernet port with integrated PoE |
| Protocols/Standards | TCP/IP/UDP, HTTP/HTTPS, ARP/RARP, ICMP, DNS (A record, SRV, NAPTR), DHCP, PPPoE, SSH, TFTP, NTP, SIMPLE, LLDP-MED. |
| Voice Codecs | G.722 codec for HD audio and G.726 codec for narrow band audio. |
| Telephony Features | Plug-n-Play, auto association, auto region detection and seamless call handover. |

| | |
|--|--|
| Security | User and administrator level access control, MD5 and MD5-sess based authentication, 256-bit AES encrypted configuration file, HTTPS, 802.1x media access control, DECT authentication. |
| Multi-language | English, Czech, German, Spanish, French, Hebrew, Dutch, Japanese, Chinese Simple, Chinese Tradition, Korean, Portuguese, Turkish. |
| Upgrade/ Provisioning | Firmware upgrade via TFTP/HTTP/HTTPS. |
| Multi Line Access | Up to 5 stations in star. Up to 2 stations cascaded in daisy chain. Auto association in star or daisy chain per optimal coverage. |
| Power & Green Energy Efficiency | <ul style="list-style-type: none"> Universal Power Supply: Input AC 100-240V 50/60Hz, Output 5VDC 1A, Micro-USB connection. PoE: IEEE802.3af Class 1, 0.44W–3.84W. |
| Package Content | DECT Unit, Universal Power Supply, Ethernet cable, Quick Start Guide, GPL statement |
| Dimensions | 28.5 mm (H) x 130 mm (W) x 90 mm (D). |
| Weight | DECT unit: 143g; Universal Power Supply: 50g; Package: 360g. |
| Temperature and Humidity | Operation: -10° to 50°C (14° to 122°F); Storage: -20° to 60°C (-4° to 140°F). Humidity: 10% to 90% non-condensing. |
| Compliance | FCC: Part 15D, Part 15B, MPE CE: EN60950, EN301489-1-6, EN301406, EN50385 RCM: AS/NZS60950 ANATEL: #2288-16-9452 |

GETTING STARTED

This chapter provides basic installation instructions including the list of the packaging contents and also description of the LED patterns.

Equipment Packaging

Table 3: Equipment Packaging

| DP760 |
|---|
| <ul style="list-style-type: none"> • 1 DECT Unit. • 1 Universal power supply 5V. • 1 Ethernet cable. • 1 Quick Start Guide. • 1 GPL Statement. |

Figure 1: DP760 Package Content

Note: Check the package before installation. If you find anything missing, contact your system administrator.

Connecting DP760

To setup the DP760 DECT Repeater, please follow the steps below:

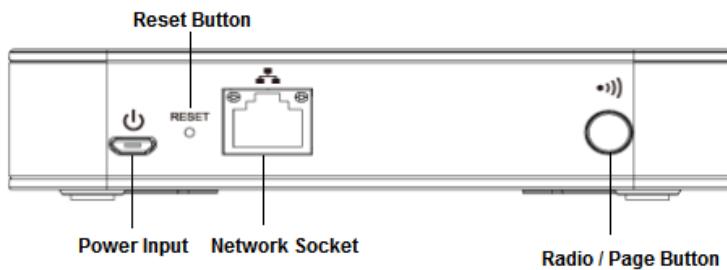

Figure 2: DP760 Back View

There are two options to connect DP760 DECT Repeater: AC power or Power over Ethernet (PoE)

Connecting via AC power

1. Connect the micro-USB connector into the related port on the repeater station and connect the other end of the power adapter into an electrical power outlet.
2. Connect the supplied Ethernet cable between the Internet port on the DP760 DECT Repeater and the Internet port in your network or the switch/hub device port.

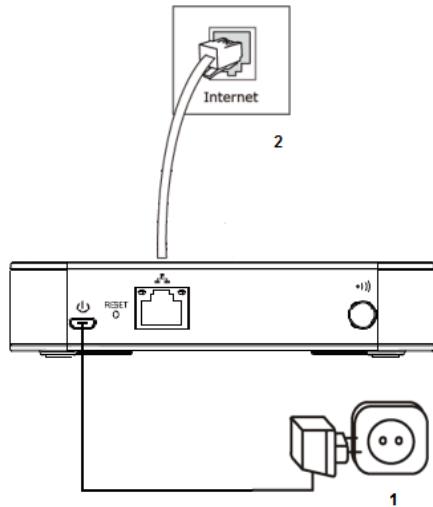

Figure 3: Connecting the Repeater Station

Connecting via PoE

To connect the DP760 DECT Repeater using PoE, you need to connect the Ethernet cable provided (or 3rd party network cable) between the Network Socket on the repeater station to Ethernet port of your PoE switch/hub.

DP760 Implementation Architecture

The DP750 Base Station can support up to 5 DP760 DECT Repeater stations to extend the coverage area of the base in all directions, including through floors and ceilings using star or daisy chain configuration as displayed on the following diagrams. The repeater determines automatically if is better to utilize star or daisy chain configuration depending on its deployment location.

When a repeater powers on, it searches for signals from the base and any other repeaters registered to the same base. The repeater will automatically connect to the strongest available signal.

The base can hand-off calls to the repeaters as the user moves from one coverage area to another. When connected to the repeater, the DP720 handsets operate as it's connected to the base, and the hand-off from the base to the repeater can be completely invisible to the end user, even during an active call.

Note: DP760 can relay up to 2 concurrent calls in star configuration and 1 concurrent call in daisy chain configuration.

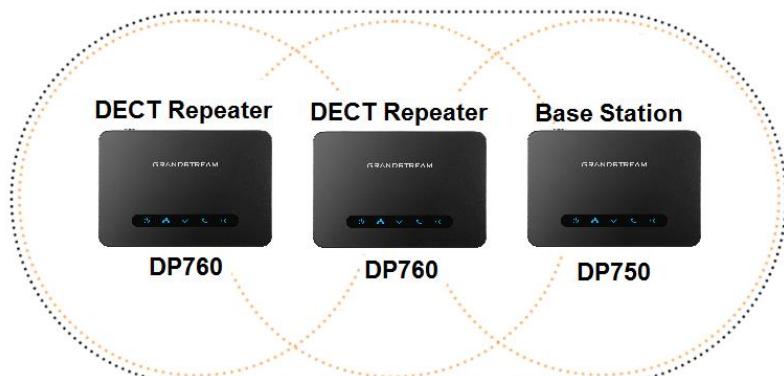

Figure 4: Daisy Chain Mode Configuration

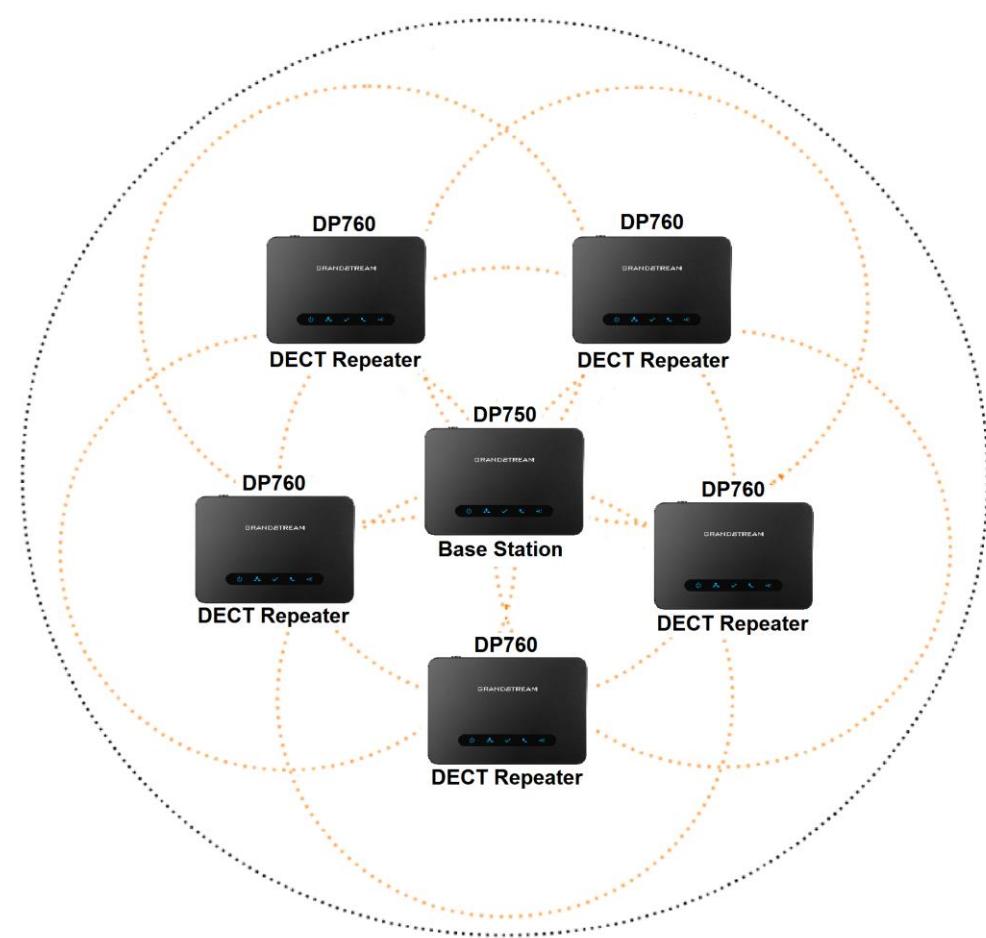

Figure 5: Star Mode Configuration

In star mode configuration, the coverage area of the repeaters should overlap the coverage area of the base station.

DP760 LED Patterns

The DP760 has 5 LED lights. Please refer to following table describing the status of each LED.

Figure 6: DP760 LED Patterns

Table 4: DP760 LED Patterns

| LED | Status |
|---|--|
|  | Indicates Power ON/OFF. |
|  | Indicates access to the network. <ul style="list-style-type: none"> Solid ON: When there is access to the network. Blinking: If there is no access to the network. |
|  | Indicates status of the association between DP760 and DP750 <ul style="list-style-type: none"> Blinking: When the DECT station is scanning for available RFPs. Solid ON: When the association between DECT repeater and Base station is operational. |
|  | Indicates status of the association between DP760 and DP750 during calls. <ul style="list-style-type: none"> Solid ON: When the association between DECT repeater and Base station is operational and no active calls. Blinking: During active calls. |
|  | Indicates status of the association link between the DP760 and DP750. <ul style="list-style-type: none"> Solid ON: When the association between DECT and Base station is operational and link is excellent. Blinking: <ul style="list-style-type: none"> Long ON, 1x short OFF if the association link is good. Long ON, 2x short OFF if the association link is weak. Long ON, 3x short OFF if the association link is poor |

CONFIGURATION GUIDE

The DP760 can be configured via the Web GUI embedded using PC's web browser. By default, DP760 is configured to obtain IP address from DHCP server where the unit is located and can be also discovered using UPnP feature (by default enabled).

Configuration via Web Browser

The DP760 embedded Web server responds to HTTP/HTTPS GET/POST requests. Embedded HTML pages allow a user to configure the DP760 through a Web browser such as Google Chrome, Mozilla Firefox and Microsoft's IE.

Note: If DP760's IP is known; users can access to its web interface by entering the IP address in their web browser from a computer connected to same network.

Accessing the Web UI using UPnP Feature

DP760 supports UPnP feature (by default enabled) for auto discovery by computers in same network. Please refer to following steps in order to access DP760 Web UI:

1. Power on DP760 and connect it to the network.
2. Connect a computer to same network as DP760. (The computer must be connected to the same sub-network as the DP760. This can be easily done by connecting the computer to the same hub or switch as the DP760).
3. Access “**Network**” directory on the computer.
4. Locate “**GRANDSTREAM-DECTREPEATER**” device and double click on it to access web GUI.
5. Enter admin's username and password and press **Login** button to access the configuration menu. (Default username and password are: admin/admin)

Accessing the Web UI using DP750 Repeater Management Mode

The repeater management mode on the DP750 allows managing discovered / paired repeater stations and also accessing the DP760 Web UI from DP750 web GUI. Please refer to following steps in order to access DP760 Web UI using DP750 repeater management mode:

1. Access DP750 Web GUI. (Default username and password are: admin/admin).
2. Navigate to DECT -> General Settings and set **Enable Repeater Management** to “Yes”.
3. Press **Save and Apply** button, then reboot the unit to apply the new settings.
4. After finishing the reboot, access again the DP750 Web GUI.
5. Navigate to Status -> DECT Repeater Status.
6. Access the discovered or paired repeater web UI by clicking on its IP address.
7. You will be redirected to login page of the repeater, enter admin's username and password and press **Login** button to access the configuration menu. (Default username and password are: admin/admin)

Saving the Configuration Changes

After users make changes to the configuration, pressing the **Save** button will save but not apply the changes until the **Apply** button on the top of web GUI page is clicked. Users can instead directly press the **Save and Apply** button. We recommend rebooting or powering cycle the phone after applying all changes.

Web UI Access Level Management

There are two default passwords for the login page:

| User Level | Username | Password | Web Pages Allowed |
|---------------------|----------|----------|--|
| End User Level | user | 123 | Status, Network Settings and Maintenance pages |
| Administrator Level | admin | admin | All pages |

The password is case sensitive with a maximum length of 25 characters.

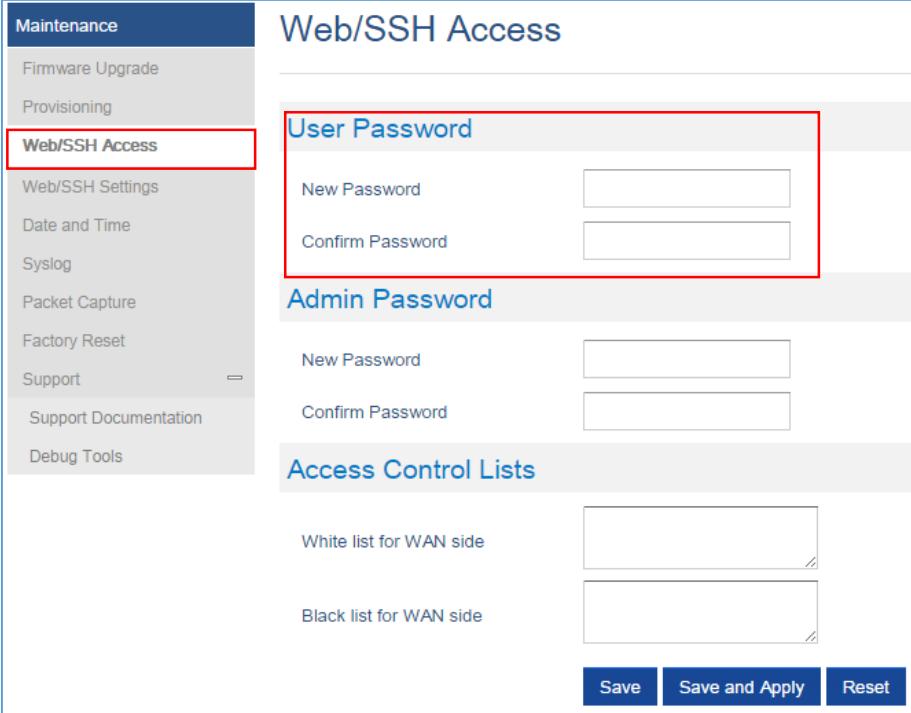

Note: When accessing the web GUI with normal user level, "Advanced Settings" page will be hidden.

When changing any settings, always SUBMIT them by pressing the **Save** or **Save and Apply** button on the bottom of the page. If using the **Save** button, after making all the changes, click on the **Apply** button on top of the page to submit. After submitting the changes in all the Web GUI pages, reboot DP760 to have the changes take effect if necessary; most of the options under the **Maintenance** page require a reboot.

Changing User Level Password

1. Access your DP760 DECT Repeater web UI by entering its IP address in your favorite browser.
2. Enter your admin's username and password. (Default username and password: admin/admin)
3. Press **Login** to access your settings.
4. Go to **Maintenance > Web/SSH Access**.
5. In **Web/SSH Access** page, locate **User Password** section:
 - a. Type in your new user password in **New Password** field.
 - b. Type in again same entered password in **Confirm Password** field.
6. Press **Save and Apply** to save your new setting.

Changing Admin Level Password

1. Access your DP760 DECT Repeater web UI by entering its IP address in your favorite browser.
2. Enter your admin's username and password. (Default username and password: admin/admin)
3. Press **Login** to access your settings.
4. Go to **Maintenance > Web/SSH Access**.
5. In **Web/SSH Access** page, locate **Admin Password** section:
 - a. Type in your new Admin Password in **New Password** field.
 - b. Type in again same entered password in **Confirm Password** field.
6. Press **Save and Apply** to save your new setting.

Changing HTTP/HTTPS Web Access Port

1. Access your DP760 DECT Repeater web UI by entering its IP address in your favorite browser.
2. Enter your admin's username and password. (Default username and password: admin/admin).
3. Press **Login** to access your settings.
4. Go to **Maintenance > Web/SSH Settings**.
5. In **Web/SSH Settings** page, locate **HTTP / HTTPS Web Port** field and change it to your new HTTP/HTTPS port.

Note: By default, the HTTP port is 80 and HTTPS port is 443.

6. Select the **Web Access Mode** depending on desired protocol (HTTP or HTTPS).
7. Press **Save and Apply** to save your new setting.

Note: A reboot is required for this change to take effect.

Web Configuration Definitions

This section describes DP760 options available in its Web UI. As mentioned, you can log in as an administrator or an end user.

- **Status:** Display the system info, network status, DECT status options.
- **DECT:** Configure DECT general settings, repeater name and RFPI manual configuration.
- **Network Settings:** Configure network basic and advanced settings.
- **Maintenance:** Configure upgrading and provisioning, web/SSH access, date and time, and syslog, packet capture and factory reset settings.

Status Page Definitions

Table 5: Status Pages Definitions

| DECT Status | |
|--------------------------------|---|
| Repeater Name | Displays name of DECT repeater. Default is DP760_[last 6 digit of MAC address] . |
| Repeater FW Version | Shows firmware version of repeater station. |
| Repeater DECT RF Region | Indicates region of repeater station. Example: EU, US, Auto... |
| Repeater Status | Describes the repeater status: <ul style="list-style-type: none"> • Scanning for available RFPs: DP760 is scanning and searching for available RFPs (Radio Fixed Part Identity) address. • Repeater is in normal operation: DP760 DECT repeater is correctly associated to DP750 base station and the link between them is operational. |

| | |
|-------------------------|--|
| | <ul style="list-style-type: none"> Repeater is searching for the requested RFP: DP760 DECT repeater is searching for DP750 base station configured RFPI. (During manual association) <p>Note: The following message “Repeater is operational after auto configuration procedure first time” appears briefly during DP760/DP750 association.</p> |
| Global Functions | <p>Connect to Base Station:</p> <ul style="list-style-type: none"> Auto Lock: Permits the auto connection between DP760 DECT Repeater and available DP750 Base Station with opened subscription, when the option “Use Manually Configured RFPI “under Web GUI > DECT > General Settings is set to “No”. Manually Lock: Force the connection between DP760 DECT Repeater and the manually configured RFPI of the DP750 Base Station, when the option “Use Manually Configured RFPI “under Web GUI > DECT > General Settings > is set to Yes”. Disconnect: Disconnect the DP760 DECT Repeater from the DP750 Base Station. |
| Network Status | |
| MAC Address | Shows Device ID in hexadecimal format. This is needed by network administrators for troubleshooting. The MAC address will be used for provisioning and can be found on the label on original box and on the label located on the bottom panel of the device. |
| IP Address Mode | Indicates used IP address mode: DHCP, Static IP or PPPoE. |
| IP Address | Displays assigned IP address. Example: 192.168.5.110 |
| Subnet Mask | Displays assigned subnet mask. Example: 255.255.255.0 |
| Gateway | Displays assigned default gateway. Example: 192.168.5.1 |
| PPPoE Link Up | Indicates PPPoE connection status. |
| DNS Server 1 | Shows assigned DNS server address 1. Example: 8.8.8.8 |
| DNS Server 2 | Shows assigned DNS server address 2. Example: 8.8.4.4 |
| System Info | |
| Product Model | Displays product model info. Default is DP760 . |
| Part Number | Shows product part number. Example: 9610003814A (last 2 digits show HW version, in this example 14A for HW version 1.4A). |

| | |
|-------------------------|--|
| Software Version | <ul style="list-style-type: none"> Firmware Status: Displays the status of the firmware loaded. Check for new firmware: Check configured server for most recent firmware version and compare to current version. After pressing button, you must reload this page to display status (navigate to a different page and then back to this page) and check firmware availability. Boot: Specifies Boot version. Current is 1.0.3.7 Core: Specifies Core version. Current is 1.0.3.7 Base: Specifies Base version. Current is 1.0.3.7 Prog: Specifies Prog version. Current is 1.0.3.7. This is the main firmware release number, which is always used for identifying the software system of the DP760. Locale: Specifies Locale version. Current is 1.0.3.7 Recovery: Specifies Recovery version. Current is 1.0.3.7 |
| System Up Time | Indicates system uptime since last reboot. |
| System Time | Shows actual time and date according to your configuration. |
| Service Status | Reveals status of VoIP applications. |
| Core Dump | Provides generated core dump file if unit malfunctions. Normal will be displayed if no issues. |

DECT Page Definitions

Table 6: DECT Page Definitions

| General Settings | |
|--------------------------------------|--|
| Repeater Name | Configures the name of the repeater station. Default is DP760_[last 6 digit of MAC address] . |
| Manually Configured Base RFPI | Configures manually RFPI of DP750 base station to connect to. If empty, the repeater station DP760 will search for DP750 base stations and connect automatically to the first one found. |
| Use Manually Configured RFPI | Permits to use manually configured RFPI (if non-empty) when set to "Yes". If set to "No", the DP760 will search for a DP750 to connect to, regardless of manual configuration. |

Network Settings

Table 7: Network Settings Pages Definitions

| Network Settings – Basic Settings | | |
|--------------------------------------|---|--|
| IP Address Mode | Selects IP address mode (DHCP, Static IP or PPPoE) for DP760 DECT Repeater. | |
| Preferred DNS Server | Specifies preferred DNS server to use when DHCP, PPPoE or Static mode is set. | |
| DHCP Settings | Host name (Option 12) | Specifies the name of the client. The name may or may not be qualified with the local domain name. This field is optional but may be required by ISP. |
| | Vendor Class ID (Option 60) | Exchanges vendor class ID by clients and servers to convey particular configuration or other identification information about a client. Default is DP7XX . |
| PPPoE Settings | Configures PPPoE account ID, password and service name. | |
| Static IP Settings | Sets IP address, subnet mask, gateway, DNS server 1, and DNS server 2. | |
| Network Settings – Advanced Settings | | |
| 802.1X Mode | Enables/Disables 802.1X mode. To enable this mode, you should select EAP-MD5. Default is Disable . | |
| 802.1X Identity | Configures the identity for 802.1X mode. | |
| MD5 Password | Determines the MD5 password for 802.1X mode. | |
| 802.1X CA Certificate | Uploads / deletes the 802.1X CA certificates. | |
| 802.1X Client Certificate | Uploads / Deletes the 802.1X Client Certificates. | |
| Enable LLDP | Activates LLDP (Link Layer Discovery Protocol). Default is Yes . | |
| Layer 2 QoS Settings | Enable VLAN | Enables / Disables the VLAN mode. Default is Disabled . |
| | Layer 2 QoS 802.1Q/VLAN Tag | Sets layer 2 QoS 802.1Q/VLAN tag. Default is 0. |

| | | |
|--------------------------------|--|--|
| | Layer 2 QoS 802.1p Priority Value for SIP signaling | Sets layer 2 QoS 802.1p priority value for SIP signaling. Default is 0 . |
| | Layer 2 QoS 802.1p Priority Value for RTP media | Sets layer 2 QoS 802.1p priority value for RTP media. Default is 0 . |
| UPnP Discovery Settings | Enable UPnP discovery | Enables UPnP discovery feature. Default is Yes . |
| | UPnP discovery notify interval | Specifies in seconds the interval to send out SSDP notifies. Default is 30 . |

Maintenance Page Definitions

Table 8: Maintenance Pages Definitions

| Firmware Upgrade | |
|--|---|
| Firmware Upgrade and Provisioning | Selects how firmware upgrade request will be sent: “Always Check for New Firmware”, “Check New Firmware only when F/W pre/suffix changes”, or “Always Skip the Firmware Check”. |
| HTTP/HTTPS User Name | Enters user name to authenticate with HTTP/HTTPS server. |
| HTTP/HTTPS Password | Enters password to authenticate with HTTP/HTTPS server. |
| Always send HTTP Basic Authentication Information | Includes configured user name and password in HTTP request before receiving authentication challenge from the server. Default is No . |
| Verify host when using HTTPS | Verifies host name in server certificate when using HTTPS. Default is Yes . |
| Upgrade via | Selects firmware upgrade method: TFTP, HTTP or HTTPS. |
| Firmware Server Path | Sets IP address or domain name of firmware server. The URL of the server that hosts the firmware release. Default is fm.grandstream.com/gs . |

| | |
|--|--|
| Firmware File Prefix | Checks if firmware file is with matching prefix before downloading it. This field enables user to store different versions of firmware files in one directory on the firmware server. |
| Firmware File Postfix | Checks if firmware file is with matching postfix before downloading it. This field enables user to store different versions of firmware files in one directory on the firmware server. |
| Allow DHCP Option 43 and Option 66 to Override Server | Obtains configuration and upgrade server's information from DHCP server using options 66 and 43. Note: If DHCP Option 66 is enabled, the repeater station will attempt downloading the firmware file from the server URL provided by DHCP, even though Firmware Server Path is left blank. |
| Automatic Upgrade | Specifies when the firmware upgrade process will be initiated; there are 4 options: (Default is No) <ul style="list-style-type: none"> • No: Repeater station will only do upgrade once at boot up. • Check every X minutes: User needs to specify a period in minutes. • Check every day: User needs to specify "Hour of the day (0-23)". • Check every week: User needs to specify "Hour of the day (0-23)" and "Day of the week (0-6)". Note: Day of week is starting from Sunday. |
| Firmware Key | Decrypts the firmware file using specified key (32-digit in Hexadecimal) when encrypted. |
| Provisioning | |
| Disable Factory Reset | Determines if factory reset via reset button will be disabled |
| XML Config File Password | Decrypts XML configuration file when encrypted. The password used for encrypting the XML configuration file is using OpenSSL. |
| HTTP/HTTPS User Name | Enters user name to authenticate with HTTP/HTTPS server. |
| HTTP/HTTPS Password | Enters password to authenticate with HTTP/HTTPS server. |
| Always send HTTP Basic Authentication Information | Includes configured user name and password in HTTP request before receiving authentication challenge from the server. Default is No . |

| | |
|--|---|
| Verify host when using HTTPS | Verifies host name in server certificate when using HTTPS. Default is Yes . |
| Provisioning via | Selects provisioning method: TFTP, HTTP or HTTPS |
| Config Server Path | Sets IP address or domain name of configuration server. The server hosts a copy of the configuration file to be installed on the DP760. Default is fm.grandstream.com/gs . |
| Config File Prefix | Checks if configuration files are with matching prefix before downloading them. This field enables user to store different configuration files in one directory on the provisioning server. |
| Config File Postfix | Checks if configuration files are with matching postfix before downloading them. This field enables user to store different configuration files in one directory on the provisioning server. |
| Allow DHCP Option 43 and Option 66 to Override Server | Obtains configuration and upgrade server's information from DHCP server using options 66 and 43. Note: If DHCP Option 66 is enabled, the DP760 will attempt downloading the firmware file from the server URL provided by DHCP, even though Config Server Path is left blank. |
| Automatic Provisioning | Specifies when provisioning process will be initiated; there are 4 options: <ul style="list-style-type: none">No: Repeater station will only request configuration files once at boot up.Check every X minutes: User needs to specify a period in minutes.Check every day: User needs to specify "Hour of the day (0-23)".Check every week: User needs to specify "Hour of the day (0-23)" and "Day of the week (0-6)". Note: Day of week is starting from Sunday. Default is No . |
| Authenticate Conf File | Authenticates configuration file before being accepted. This protects the device configuration from unauthorized modifications. Default is No . |
| Upload Device Config | Uploads manually device configuration to repeater station; files both in TXT and XML format are supported. |
| Device Config (TXT) | Downloads actual device configuration file in .txt format. |
| Device Config (XML) | Downloads default device configuration file in .xml format. |

| Web/SSH Access | |
|---|---|
| User Password | Configures user level password. Case sensitive and max length is 30 characters. |
| Confirm Password | Configures the new user password again to confirm. |
| Admin Password | Configures admin level password. Case sensitive and max. length is 30 characters. |
| Confirm Password | Configures the new admin password again to confirm. |
| Access Control Lists | White list for WAN side If white list exists, then only these IP addresses are allowed to web and SSH access. |
| | Black list for WAN side If black list exists and white list is empty, then only these IP addresses are not allowed to web and SSH access. |
| Web/SSH Settings | |
| HTTP Web Port | Customizes HTTP port used to access repeater station web UI. Default is 80 . |
| HTTPS Web Port | Customizes HTTPS port used to access repeater station web UI. Default is 443 . |
| Web Access Mode | Determines the protocol to be used for the web interface access. Default is HTTP . |
| Disable SSH | Disables SSH access. Default is No . |
| SSH Port | Customizes SSH access port. Default is 22 . |
| Date and Time | |
| NTP Server | Defines URL or IP address of the NTP (Network Time Protocol) server. Used by the repeater to synchronize the date and time. A list of public NTP servers can be found at http://www.ntp.org . |
| NTP Update Interval | Contacts NTP server at specified period of time (in minutes) to obtain the date and time. Default is 60 minutes. |
| Allow DHCP Option 42 to NTP Server | Obtains NTP server address from a DHCP server using DHCP Option 42; it will override configured NTP Server. If set to "No", the repeater will use configured NTP server to synchronize time and date even if a NTP server is provided by DHCP server. Default is Yes . |
| Time Zone | Selects time zone to define date/time on the repeater station. |
| Self-Defined Time Zone | Allows users to define their own time zone. |

| | | |
|--|--|--|
| Allow DHCP Option 2 to override time zone | Obtains time zone setting (offset) from a DHCP server using DHCP Option 2; it will override selected time zone. If set to “No”, the repeater station will use selected time zone even if provided by DHCP server. Default is Yes . | |
| Syslog | | |
| Syslog Server | Sets IP address or URL of system log server. The server collects system log information from the repeater station. | |
| Syslog Level | <p>Selects log level; the level is one of DEBUG, INFO, WARNING, ERROR (default is NONE). Syslog messages are sent based on the following events:</p> <ol style="list-style-type: none"> 1. product model/version on boot up (INFO level) 2. NAT related info (INFO level) 3. sent or received SIP message (DEBUG level) 4. SIP message summary (INFO level) 5. inbound and outbound calls (INFO level) 6. registration status change (INFO level) 7. negotiated codec (INFO level) 8. Ethernet link up (INFO level) 9. SLIC chip exception (WARNING and ERROR levels) 10. memory exception (ERROR level) <p>Syslog uses USER facility. In addition to standard Syslog payload, it contains the following components: GS_LOG: [device MAC address] [error code] error message.</p> <p><i>Example: May 19 02:40:38 192.168.1.14 GS_LOG:[00:0b:82:00:a1:be][000] Ethernet link is up</i></p> | |
| Packet Capture | | |
| Status | Displays packet capture status. When user starts to capture trace file, it will show “RUNNING” status, otherwise, it will show “STOPPED”. | |
| Factory Reset | | |
| Factory Reset | Press Reset to restore the factory default settings on the DP760. | |
| Support | | |
| Support Documentation | Online Support | Redirects the users to tools page and DP7xx product pages available on Grandstream official website. |
| | Offline Support | Allows users to download administration / user guides and drilling templates. |

| | | |
|-------------------|---|---|
| Debug Tool | Remote Log Submission - Terms & Conditions | <p>By clicking the submit button, you agree to allow the device to send these files to Grandstream to be used for troubleshooting purposes. If possible, please include a comment with information regarding the use of the device when the problem occurred. As an alternative to the device submitting the files, you may download the files below and submit them to Grandstream manually.</p> |
| | Debug Log Files | <p>Kills phone control process on base station and generates core file and other debug information. Reboot required to restart process.</p> |

Rebooting from Remote Location

Press the **Reboot** button on the top right corner of the web GUI page to reboot the DP760 remotely. The web browser will then display a reboot message to confirm the reboot by pressing **OK** or avoid by clicking on **Cancel** button. Wait for about 1 minute to log in again.

DP760 DECT REPEATER ASSOCIATION WITH DP750

Step 1: Enabling Repeater Mode On DP750

Before associating the DP760 DECT Repeater to your DP750 Base Station, you should firstly enable the repeater mode on your base station.

Please refer following steps to enable the repeater mode on the DP750 base station:

1. Access the Web GUI of your DP750 using the admin's username and password. (Default username and password is: admin/admin).
2. Navigate to **DECT > General Settings** and set **Enable Repeater Mode** to "Yes".

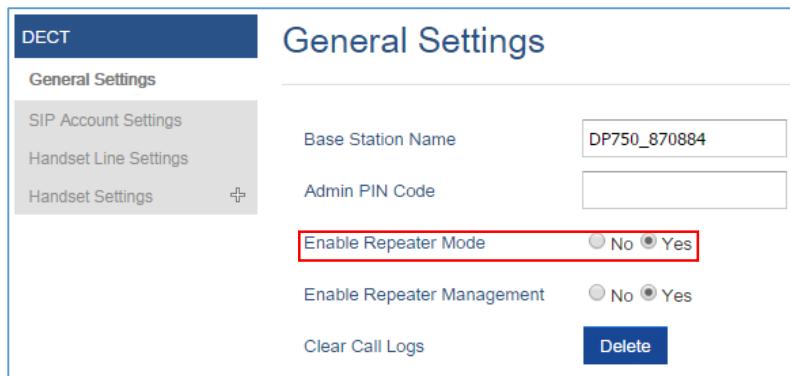

Figure 10: Enable Repeater Mode

3. Press **Save and Apply**, then reboot the base to apply the new settings.

Step 2: DP760 DECT Repeater Association

After enabling the repeater mode on DP750 Base Station, you can easily associate it with your DP760 DECT Repeater using two methods:

- **Auto Association**
- **Manual Association**

Option 1: Auto Association

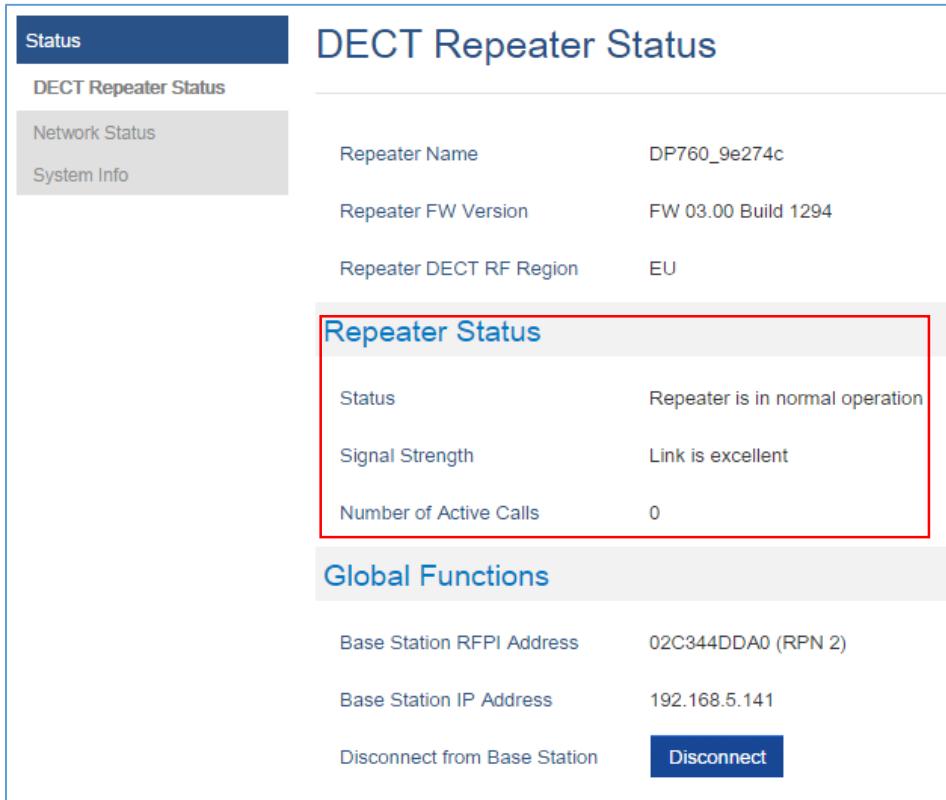

To auto associate your DP760 DECT Repeater with DP750 Base Station:

1. Power on the DP760 DECT Repeater,
2. After the DP760 finish booting, the association LED  will be blinking to indicate that the repeater is searching for nearby base stations.

Note: If all the LEDs remain on, it indicates that the DP760 Repeater has successfully associated with a DP750 Base and ready for use. (Please refer to [DP760 Dissociation](#)).

3. Open subscription on your DP750 Base Station using one of following methods:
 - Rebooting the Base station.
 - Long press on page/subscribe button on the back panel of DP750 for 7 seconds.
 - Access DP750 Web GUI and press subscribe button .
4. The DP760 DECT Repeater will automatically pair to DP750. Upon successful association with the DP750 Base station all LEDs will turn ON and the repeater status will be updated as following.

| DECT Repeater Status | | | | | |
|---|--|---|--|------------------------------|-------------------|
| Network Status | Repeater Name: DP760_9e274c | | | | |
| System Info | Repeater FW Version: FW 03.00 Build 1294 | | | | |
| | Repeater DECT RF Region: EU | | | | |
| Repeater Status <table border="1"> <tr> <td>Status: Repeater is in normal operation</td> </tr> <tr> <td>Signal Strength: Link is excellent</td> </tr> <tr> <td>Number of Active Calls: 0</td> </tr> </table> | | Status: Repeater is in normal operation | Signal Strength: Link is excellent | Number of Active Calls: 0 | |
| Status: Repeater is in normal operation | | | | | |
| Signal Strength: Link is excellent | | | | | |
| Number of Active Calls: 0 | | | | | |
| Global Functions <table> <tr> <td>Base Station RFPI Address: 02C344DDA0 (RPN 2)</td> </tr> <tr> <td>Base Station IP Address: 192.168.5.141</td> </tr> <tr> <td>Disconnect from Base Station</td> <td>Disconnect</td> </tr> </table> | | Base Station RFPI Address: 02C344DDA0 (RPN 2) | Base Station IP Address: 192.168.5.141 | Disconnect from Base Station | Disconnect |
| Base Station RFPI Address: 02C344DDA0 (RPN 2) | | | | | |
| Base Station IP Address: 192.168.5.141 | | | | | |
| Disconnect from Base Station | Disconnect | | | | |

Figure 11: Repeater Associated Status

Note: For auto association, the option “Use manually configured RFPI “ under DP760 Web GUI should be disabled (by default disabled).

Option 2: Manual Association

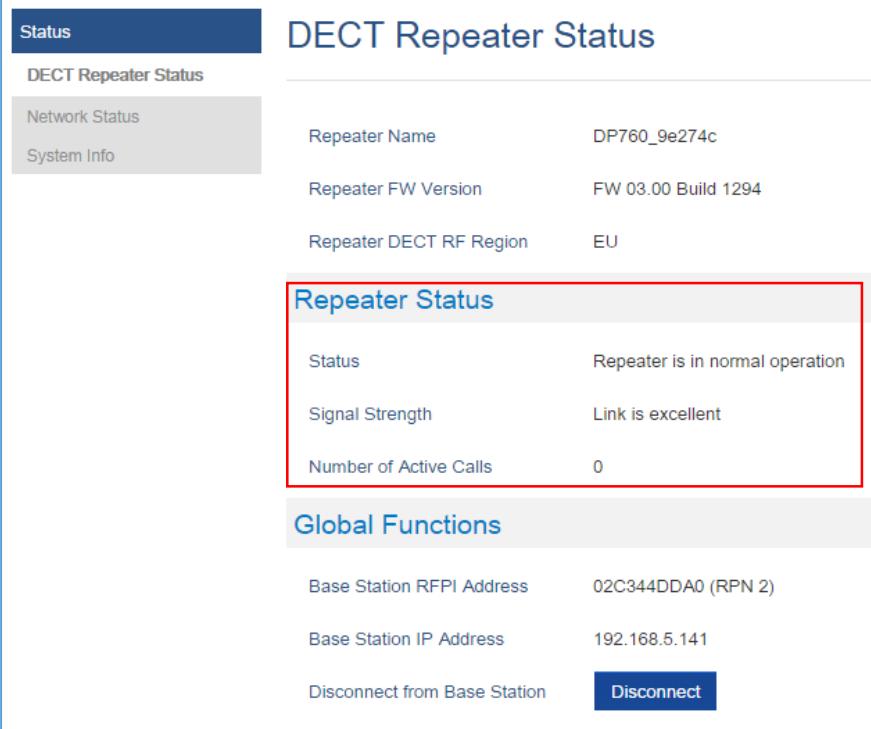

To manually associate your DP760 DECT Repeater to your DP750 Base Station:

1. Access the Web GUI of your DP760 using the admin's username and password. (Default username and password is: admin/admin).
2. Navigate to **DECT > General Settings** and set **Use Manually Configured RFPI** to “Yes” .
3. On **Manually Configured Base RFPI** field, configure your DP750 Base Station RFPI address.

Note: The RFPI Address of your DP750 Base Station is available under the Web GUI > **Status > DECT Status > Base DECT RFPI Address**.

4. Click Save and Apply to confirm the new settings.
5. Open subscription on your DP750 Base Station using one of following methods:
 - Rebooting the Base station
 - Long press on page/subscribe button on the back panel of DP750 for 7 seconds
 - Access DP750 Web GUI and press subscribe button .
6. The DP760 DECT Repeater will automatically pair to DP750. If the association is correctly associated, all the LEDs will remain solid on and the repeater status will be updated as following.

| DECT Repeater Status | |
|------------------------------|---------------------------------|
| Status | DP760_9e274c |
| Repeater FW Version | FW 03.00 Build 1294 |
| Repeater DECT RF Region | EU |
| Repeater Status | |
| Status | Repeater is in normal operation |
| Signal Strength | Link is excellent |
| Number of Active Calls | 0 |
| Global Functions | |
| Base Station RFPI Address | 02C344DDA0 (RPN 2) |
| Base Station IP Address | 192.168.5.141 |
| Disconnect from Base Station | Disconnect |

Figure 12: Repeater Associated Status

Note: Make sure that **Repeater Mode** is enabled on your DP750 Base Station.

Option 3 : Repeater Management Mode On DP750

❖ Enabling Repeater Management Mode

The following steps illustrate how to enable and use the “Repeater Management” mode on DP750:

1. Access DP750 Web GUI. (Default username and password are: admin/admin).
2. Navigate to **DECT > General Settings** and set **Enable Repeater Management** to “Yes”.
3. Press **Save and Apply**, then reboot the unit to apply the new settings.

❖ **Associating DP760 using Repeater Management Mode on DP750**

The repeater management mode displays discovered and paired devices using their name, IP and Mac addresses and also gives the possibility of associating the DP750 Base Station with DP760 DECT Repeater.

Please refer to following steps in order to associate DP760 with DP750 using the repeater management mode:

1. Access DP750 Web GUI. (Default username and password are: admin/admin).
2. Navigate to **Status > DECT Repeater Status**.
3. Select the repeater station from **Discovered Devices**.
4. Clink **Link** button to associate the base and repeater stations.

Note: The DP760 Repeater stations associated with DP750 Base Station are displayed and available under **Status > DECT Repeater Status > Paired Devices** with their status, signal strength, number of active calls and also possibility to disconnecting them from the paired base station.

DP760 DECT REPEATER DISSOCIATION

To disconnect DP760 DECT Repeater from the Base Station DP750, please refer to following options:

Option 1: Using DP760 Web GUI

To disconnect your DP760 DECT Repeater via web GUI, please refer to following steps:

1. Open Web browser on your computer.
2. Enter the DP760's IP address in the address bar of the browser.
3. Enter the administrator's username and password to access the Web Configuration Menu. (Default username and password: admin/admin)
4. Navigate to **Status > DECT Status > Global Functions** and press **Disconnect**.
5. The DP760 DECT Repeater will be automatically disconnected from the DP750 and it will start again scanning for available RFPs.

Option 2: Using Page Button

Long press on page button on the back panel of DP760 for 7 seconds, it will remove the association values of the previous base station.

Option 3: Using Repeater Management Mode on DP750

To disconnect your DP760 DECT Repeater using the repeater management mode on DP750:

1. Access DP750 Web GUI (default username and password are: admin/admin).
2. Navigate to **Status > DECT Repeater Status**.
3. Select the repeater station from “**Discovered Devices**”.
4. Clink **Unlink** button to dissociate the repeater from the base station.

UPGRADING AND PROVISIONING

The DP760 DECT Repeater can be upgraded via TFTP/HTTP/HTTPS by configuring the URL/IP Address for the TFTP/HTTP/HTTPS server and selecting a download method. Configure a valid URL for TFTP or HTTP/HTTPS; the server name can be FQDN or IP address.

Examples of valid URLs:

firmware.grandstream.com

fw.ipvideotalk.com/gs

Firmware Upgrade Procedure

Please follow below steps in order to upgrade the firmware version of your DP760 repeater station:

1. Access the Web GUI of your DP760 using the admin's username and password. (Default username and password is: admin/admin).
2. Navigate to **Maintenance > Firmware Upgrade** page, enter the IP address or the FQDN for the upgrade server in "**Firmware Server Path**" field and choose to upgrade via TFTP or HTTP/HTTPS.
3. Make sure to select "**Always Check for New Firmware**".
4. Update the change by clicking the "**Save and Apply**" button. Then "**Reboot**" or power cycle the repeater station to update the new firmware.

Upgrading via Local TFTP/HTTP Servers

For users that would like to use remote upgrading without a local TFTP/HTTP server, Grandstream offers a NAT-friendly HTTP server. This enables users to download the latest software upgrades for their devices via this server. Please refer to the webpage: <http://www.grandstream.com/support/firmware>

Alternatively, users can download a free TFTP or HTTP server and conduct a local firmware upgrade. A free windows version TFTP server is available for download from:

http://www.solarwinds.com/products/freetools/free_ftpd_server.aspx

<http://tftpd32.jounin.net/>

DP760 User Manual

Page | 37

Instructions for local firmware upgrade via TFTP:

1. Unzip the firmware files and put all of them in the root directory of the TFTP server.
2. Connect the PC running the TFTP server and the phone to the same LAN segment.
3. Launch the TFTP server and go to the File menu->Configure->Security to change the TFTP server's default setting from "**Receive Only**" to "**Transmit Only**" for the firmware upgrade.
4. Start the TFTP server and configure the TFTP server in the phone's web configuration interface.
5. Configure the Firmware Server Path to the IP address of the PC.
6. Save and Apply the changes and reboot the DP760 DECT Repeater.

End users can also choose to download a free HTTP server from <http://httpd.apache.org/> or use Microsoft IIS web server.

RESTORE FACTORY DEFAULT SETTINGS

Warning:

Restoring the Factory Default Settings will delete all configuration information on the repeater. Please backup or print all the settings before you restore to the factory default settings. Grandstream is not responsible for restoring lost parameters and cannot connect your device to your VoIP service provider.

Resetting DP760 Repeater Station

There are two methods to reset your DP760 DECT Repeater to the default settings:

Via Reset Button

1. Locate the reset hole on the back panel of your DP760.
2. Insert a pin in this hole, and press for about 7 seconds.
3. Take out the pin. The unit will restart automatically with parameters restored to default values.

Note: A quick press on the reset hole will only reboot the unit.

Via Web GUI

1. Access your DP760 DECT Repeater web UI.
2. Enter your admin's username and password. (Default username and password: admin/admin)
3. Press **Login** to access and navigate to **Maintenance > Factory Reset**.
4. Press Reset button and the unit will prompt a confirmation message, press **OK** to reset the repeater, then the unit restart automatically with parameters restored to default values or press **Cancel** to annul the reset.

EXPERIENCING THE DP760

Please visit our website: <http://www.grandstream.com> to receive the most up- to-date updates on firmware releases, additional features, FAQs, documentation and news on new products.

We encourage you to browse our [product related documentation](#), [FAQs](#) and [User and Developer Forum](#) for answers to your general questions. If you have purchased our products through a Grandstream Certified Partner or Reseller, please contact them directly for immediate support.

Our technical support staff is trained and ready to answer all of your questions. Contact a technical support member or [submit a trouble ticket online](#) to receive in-depth support.

Thank you again for purchasing Grandstream DECT Repeater, it will be sure to bring convenience to both your business and personal life.

Compliance

FCC Notice

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

To ensure safety of users, the FCC has established criteria for the amount of radio frequency energy that can be safely absorbed by a user or bystander according to the intended usage of the product. This product has been tested and found to comply with the FCC criteria. Both the Handset may be safely held against the ear of the user. The telephone base shall be installed and used such that parts of the user's body other than the hands are maintained at a distance of approximately 20 cm (8 inches) or more.

FCC RF Radiation Exposure Statement

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment.

For base unit it should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body..
