## DOCUMENT PURPOSE

This document describes the basic concept and tasks necessary to use and configure your HT801. And it covers the topic of connecting and configuring the HT801, making basic operations and the call features. Please visit <http://www.grandstream.com/support> to download the latest “HT801 User Guide”.

This guide covers following topics:

- [Product overview](#)
- [Getting started](#)
- [Configuration guide](#)
- [Upgrade and provisioning](#)
- [Restore factory default settings](#)

## CHANGE LOG

This section documents significant changes from previous versions of administration guide for HT801. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

### **Firmware Version 1.0.0.1**

- This is the initial version for HT801.

## GUI INTERFACE EXAMPLES

## WELCOME

The HT801 Analog Telephone Adapter provides transparent connectivity for analog phones and faxes to the world of Internet voice. Connecting to any analog phone, fax or PBX, the HT801 is an effective and flexible solution for accessing Internet-based telephone services and corporate intranet systems across established LAN and Internet connections. The Grandstream Handy Tone HT801 is a new addition to the popular Handy Tone ATA product family. This manual will help you learn how to operate and manage your Handy Tone and make the best use of its many upgraded features including simple and quick installation, 3- way conferencing, direct IP-IP Calling, and new provisioning support among other features. This HT801 is very easy to manage and configure, and is specifically designed to be an easy to use and affordable VoIP solution for both the residential user and the teleworker.

## PRODUCT OVERVIEW

The HT801 is a 1 port analog telephone adapter (ATA) that allows users to create a high-quality and manageable IP telephony solution for residential and office environments. Its ultra-compact size, voice quality, advanced VoIP functionality, security protection and auto provisioning options enable users to take advantage of VoIP on analog phones and enables service providers to offer high quality IP service. The HT801 is an ideal ATA for individual use and for large scale commercial IP voice deployments.

### Feature Highlights

The following table contains the major features of the HT801:

**Table 1: HT801 Features at a Glance**

 <p><b>HT801</b></p>	<ul style="list-style-type: none"> <li>• 1 SIP profile through 1 FXS port and single 10/100Mbps port</li> <li>• 3-way voice conferencing</li> <li>• Wide range of caller ID formats</li> <li>• Advanced telephony features, including call transfer, call forward, call-waiting, do not disturb, message waiting indication, multi-language prompts, flexible dial plan and more</li> <li>• T.38 Fax for creating Fax-over-IP and GR-909 Line Testing Functionalities</li> <li>• TLS and SRTP security encryption technology to protect calls and accounts</li> <li>• Automated provisioning options include TR-069 and XML config files</li> <li>• Failover SIP server automatically switches to secondary server if main server loses connection</li> <li>• Use with Grandstream's UCM series of IP PBXs for Zero Configuration provisioning</li> <li>• GR-909 Line Testing Functionalities</li> </ul>
--	--

### HT801 Technical Specifications

The following table resumes all the technical specifications including the protocols / standards supported, voice codecs, telephony features, languages and Upgrade/ Provisioning settings for the HT801.

**Table 2: HT801 Technical Specifications**

Interfaces	
Telephone Interfaces	One (1) RJ11 FXS port
Network Interface	One (1) 10/100Mbps auto-sensing Ethernet port (RJ45)
LED Indicators	POWER, INTERNET, PHONE
Factory Reset Button	Yes
Voice, Fax, Modem	
Telephony Features	Caller ID display or block, call waiting, flash, blind or attended transfer,

	forward, hold, do not disturb, 3-way conference
<b>Voice Codecs</b>	G.711 with Annex I (PLC) and Annex II (VAD/CNG), G.723.1, G.729A/B, G.726, iLBC, OPUS, dynamic jitter buffer, advanced line echo cancellation
<b>Fax over IP</b>	T.38 compliant Group 3 Fax Relay up to 14.4kbps and auto-switch to G.711 for Fax Pass-through
<b>Short/Long Haul Ring Load</b>	2 REN: Up to 1km on 24 AWG
<b>Caller ID</b>	Belcore Type 1 & 2, ETSI, BT, NTT, and DTMF-based CID
<b>Disconnect Methods</b>	Busy Tone, Polarity Reversal/Wink, Loop Current
<b>Signaling</b>	
<b>Network Protocols</b>	TCP/IP/UDP, RTP/RTCP, HTTP/HTTPS, ARP/RARP, ICMP, DNS, DHCP, NTP, TFTP, TELNET, STUN, SIP (RFC3261), SIP over TCP/TLS, SRTP, TR-069
<b>QoS</b>	Layer 3 (ToS, DiffServ, MPLS)
<b>DTMF Methods</b>	In-audio, RFC2833 and/or SIP INFO
<b>Provisioning and Control</b>	HTTP, HTTPS, TELNET, TFTP, TR-069, secure and automated provisioning using AES encryption, syslog
<b>Security</b>	
<b>Media</b>	SRTP
<b>Control</b>	TLS/SIPS/HTTPS
<b>Management</b>	Syslog support, telnet, remote management using web browser
<b>Physical</b>	
<b>Universal Power Supply</b>	Input: 100-240VAC, 50-60Hz Output: 5.0VDC/1.0A
<b>Environmental</b>	Operational: 32° – 104°F or 0° – 40°C Storage: 14° – 140°F or -10° – 60°C Humidity: 10 – 90% Non-condensing
<b>Dimensions and Weight</b>	- Dimension: 100mm x 100mm x 29.5mm - Weight: TBD
<b>Compliance</b>	
<b>Compliance</b>	<ul style="list-style-type: none"> <li>FCC : Part15B</li> <li>CE : EN55032, EN55024, EN61000-3-2, EN61000-3-3, EN60950-1</li> <li>RCM: AS/NZS CISPR22, AS/NZS60950.1, S003</li> </ul>

## GETTING STARTED

This chapter provides basic installation instructions including the list of the packaging contents and also information for obtaining the best performance with the HT801.

### Equipment Packaging

The HT801 ATA package contains:

**Figure 1: HT801 Package Contents**

**Note:** Check the package before installation. If you find anything missing, contact your system administrator.

### HT801 Ports Description

The following figure describes the different ports on the back panel of the HT801.

**Figure 2: HT801 Back Panel**

**Table 3: Definition of the HT801 Connectors**

<b>Phone</b>	Connects the analog phones / fax machines to the phone adapter using an RJ-11 telephone cable.
<b>Internet port</b>	Connects the phone adapter to your router or gateway using an Ethernet RJ45 network cable.

<b>Micro-USB Power</b>	Powers the phone adapter (5V – 1A).
<b>Reset</b>	Factory reset button. Press for 7 seconds to reset factory default settings.

## Connecting HT801

The HT801 is designed for easy configuration and easy installation, to connect your HT801, please follow the steps above:

1. Insert a standard RJ11 telephone cable into the phone port and connect the other end of the telephone cable to a standard touch-tone analog telephone.
2. Insert the Ethernet cable into the internet or LAN port of the HT801 and connect the other end of the Ethernet cable to an uplink port (a router or a modem, etc.)
3. Insert the power adapter into the HT801 and connect it to a wall outlet.
4. Power, Ethernet and Phone LEDs will be solidly lit when the HT801 is ready for use.

Figure 3: Connecting the HT801

## HT801 LEDs Pattern

There are three (3) LED buttons that help you manage the status of your Handy Tone HT801.

Figure 4: HT801 LEDs Pattern

**Table 4: HT801 LEDs Pattern Description**

LED Lights	Status
<b>Power LED</b> 	The Power LED lights up when the HT801 is powered on and it flashes when it is booting up
<b>Internet LED</b> 	The Ethernet LED lights up when the HT801 is connected to your network through the Ethernet port and it flashes when there is data being sent or received.
<b>Phone LED</b> 	The phone LED indicates status of the FXS port-phone on the back panel <ul style="list-style-type: none"> <li>• <b>OFF</b> - Unregistered</li> <li>• <b>ON (Solid Blue)</b> - Registered and Available</li> <li>• <b>Blinking every second</b> - Off-Hook / Busy</li> <li>• <b>Slow blinking</b> - FXS LEDs indicates voicemail</li> </ul>

## CONFIGURATION GUIDE

The HT801 can be configured via one of two ways:

- The IVR voice prompt menu.
- The Web GUI embedded on the HT801 using PC's web browser.

### Obtain HT801 IP Address via Connected Analogue Phone

HT801 is by default configured to obtain the IP address from DHCP server where the unit is located. In order to know which IP address is assigned to your HT801, you should access to the "[Interactive Voice Response Menu](#)" of your adapter via the connected phone and check its IP address mode.

Please refer to the steps below to access the interactive voice response menu:

1. Use a telephone connected to phone port of your HT801.
2. Press \*\*\* (press the star key three times) to access the IVR menu and wait until you hear "Enter the menu option".
3. Press 02 and the current IP address will be announced.

### Understanding HT801 Interactive Voice Prompt Response Menu

The HT801 has a built-in voice prompt menu for simple device configuration which lists actions, commands, menu choices, and descriptions. The IVR menu works with any phone connected to the HT801. Pick up the handset and dial "\*\*\*\*" to use the IVR menu.

Table 5: Voice Prompt Menu

Menu	Voice Prompt	Options
<b>Main Menu</b>	"Enter a Menu Option"	Press "*" for the next menu option Press "#" to return to the main menu Enter 01-05, 07,10, 13-17,47 or 99 menu options
<b>01</b>	"DHCP Mode", "Static IP Mode"	Press "9" to toggle the selection If using "Static IP Mode", configure the IP address information using menus 02 to 05. If using "Dynamic IP Mode", all IP address information comes from the DHCP server automatically after reboot.
<b>02</b>	"IP Address " + IP address	The current WAN IP address is announced If using "Static IP Mode", enter 12 digit new IP address. <b>You need to reboot the HT801 for the new IP address to take Effect.</b>
<b>03</b>	"Subnet " + IP address	Same as menu 02
<b>04</b>	"Gateway " + IP address	Same as menu 02

05	"DNS Server " + IP address	Same as menu 02
07	Preferred Vocoder	Press "9" to move to the next selection in the list: <ul style="list-style-type: none"> <li>• PCM U / PCM A</li> <li>• iLBC</li> <li>• G-726</li> <li>• G-723</li> <li>• G-729</li> </ul>
10	"MAC Address"	Announces the Mac address of the unit.
13	Firmware Server IP Address	Announces current Firmware Server IP address. Enter 12 digit new IP address.
14	Configuration Server IP Address	Announces current Config Server Path IP address. Enter 12 digit new IP address.
15	Upgrade Protocol	Upgrade protocol for firmware and configuration update. Press "9" to toggle between <b>TFTP</b> / <b>HTTP</b> / <b>HTTPS</b>
16	Firmware Version	Announces Firmware version information.
17	Firmware Upgrade	Firmware upgrade mode. Press "9" to toggle among the following three options: <ul style="list-style-type: none"> <li>- always check</li> <li>- check when pre/suffix changes</li> <li>- never upgrade</li> </ul>
47	"Direct IP Calling"	Enter the target IP address to make a direct IP call, after dial tone. (See " <i>Make a Direct IP Call</i> ".)
86	Voice Mail	Number of Voice Mails
99	"RESET"	Press "9" to reboot the device Enter MAC address to restore factory default setting (See <b>Restore Factory Default Setting</b> section)
	"Invalid Entry"	Automatically returns to main menu
	"Device not registered"	This prompt will be played immediately after off hook If the device is not registered and the option "Outgoing Call without Registration" is in NO

#### Five success tips when using the voice prompt

- "\*" shifts down to the next menu option and "#" returns to the main menu.
- "9" functions as the ENTER key in many cases to confirm or toggle an option.
- All entered digit sequences have known lengths - 2 digits for menu option and 12 digits for IP

address. For IP address, add 0 before the digits if the digits are less than 3 (i.e. - 192.168.0.26 should be key in like 192168000026. No decimal is needed).

- Key entry cannot be deleted but the phone may prompt error once it is detected.

## Configuration via Web Browser

The HT801 embedded Web server responds to HTTP GET/POST requests. Embedded HTML pages allow a user to configure the HT801 through a web browser such as Google Chrome, Mozilla Firefox and Microsoft's IE.

### Accessing the Web UI

1. Connect the computer to the same network as your HT801.
2. Make sure the HT801 is booted up.
3. You may check your HT801 IP address using the IVR on the connected phone.

Please see [Obtain HT801 IP Address via Connected Analogue Phone](#)

4. Open Web browser on your computer.
5. Enter the HT801's IP address in the address bar of the browser.
6. Enter the administrator's password to access the Web Configuration Menu (default password is: admin).

**Note:** The computer must be connected to the same sub-network as the HT801. This can be easily done by connecting the computer to the same hub or switch as the HT801.

### Web UI Access Level Management

There are two default passwords for the login page:

User Level	Password	Web Pages Allowed
End User Level	123	Only Status and Basic Settings
Administrator Level	admin	All pages

The password is case sensitive with maximum length of 25 characters.

When changing any settings, always submit them by pressing **Update** or **Apply** button on the bottom of the page. After submitting the changes in all the Web GUI pages, reboot HT801 to have the changes take effect if necessary; most of the options under the **Advanced Settings** and **FXS Port** page require reboot.

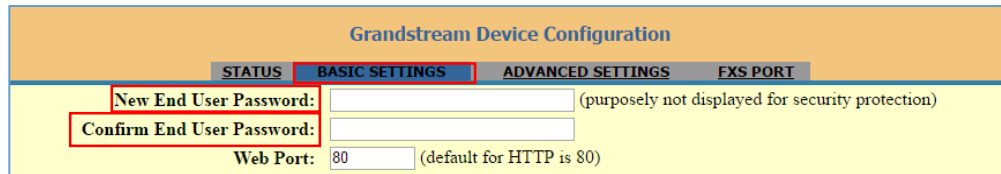

### Saving the Configuration Changes

After users makes changes to the configuration, pressing **Update** button will save but not apply the changes until **Apply** button is clicked. Users can instead directly press **Apply** button. We recommend rebooting or powering cycle the phone after applying all the changes.

## Changing Admin Level Password

1. Access your HT801 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings and navigate to **Advanced Settings > Admin Password**.
4. Enter the new admin password.
5. Confirm the new admin password.
6. Press **Apply** at the bottom of the page to save your new settings.

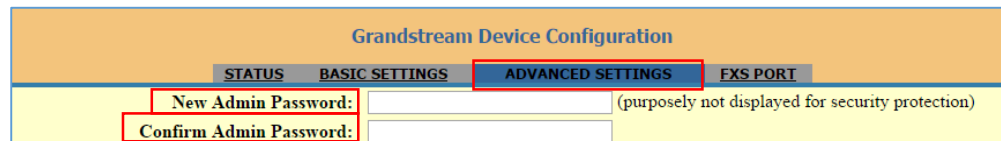

The screenshot shows the 'Grandstream Device Configuration' interface. The 'ADVANCED SETTINGS' tab is selected. Under the 'ADMIN PASSWORD' section, there are two input fields: 'New End User Password:' and 'Confirm End User Password:'. Both fields are highlighted with red boxes. A note next to the first field says '(purposely not displayed for security protection)'. Below these fields is a 'Web Port:' field with the value '80' and a note '(default for HTTP is 80)'.

Figure 5: Admin Level Password

## Changing User Level Password

1. Access your HT801 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings and navigate to **Basic Settings > End User Password**.
4. Enter the new end-user password.
5. Confirm the new end-user password.
6. Press **Apply** at the bottom of the page to save your new settings.

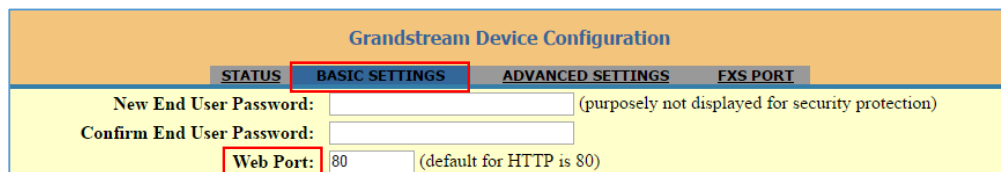

The screenshot shows the 'Grandstream Device Configuration' interface. The 'BASIC SETTINGS' tab is selected. Under the 'END USER PASSWORD' section, there are two input fields: 'New Admin Password:' and 'Confirm Admin Password:'. Both fields are highlighted with red boxes. A note next to the first field says '(purposely not displayed for security protection)'.

Figure 6: User Level Password

## Changing HTTP Web Port

1. Access your HT801 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings and navigate to **Basic Settings > Web Port**.
4. Change the current port to your desired/new HTTP port. Ports accepted are in range [1-65535].
5. Press **Apply** at the bottom of the page to save your new settings.

The screenshot shows the 'Grandstream Device Configuration' interface. The 'BASIC SETTINGS' tab is selected. Under the 'WEB PORT' section, there is a 'Web Port:' field with the value '80' and a note '(default for HTTP is 80)'. The field is highlighted with a red box.

Figure 7: Web HTTP Port

## Web Configuration Pages Definitions

This section describes the options in the HT801 Web UI. As mentioned, you can log in as an administrator or an end user.

- **Status:** Displays the system info, network status, account status, and line options.
- **Basic Settings:** Configures the end user level password, IP address modes, web access, time zone settings and language.
- **Advanced Settings:** Configures networks, upgrading and provisioning, TR-069, security settings, date and time, syslog, audio settings, call settings and call progress tones.
- **FXS Port:** Configures SIP settings, SIP registration, accounts settings, NAT settings, call features, ring tones.

## Status Page Definitions

Table 6: Status Page Definitions

Account Status	
<b>MAC Address</b>	Shows device ID in hexadecimal format. This is needed by network administrators for troubleshooting. The MAC address will be used for provisioning and can be found on the label on original box and on the label located on the bottom panel of the device.
<b>IP Address</b>	Displays assigned IP address. Example: 192.168.5.110.
<b>Product Model</b>	Displays product model info. Default is <b>HT801</b> .
<b>Hardware Version</b>	Displays the hardware revision information and the part number.
<b>Software version</b>	<ul style="list-style-type: none"> <li>• <b>Program:</b> Specifies Program version. Current is 1.0.0.1 This is the main firmware release number, which is always used for identifying the software system of the HT801.</li> <li>• <b>Bootloader:</b> Specifies Boot version. Current is 1.0.0.1</li> <li>• <b>Core:</b> Specifies Core version. Current is 1.0.0.1</li> <li>• <b>Base:</b> Specifies Base version. Current is 1.0.0.1</li> <li>• <b>CPE:</b> Specifies CPE version. CPE version is displayed only when HT801 is connected to an ACS using TR-069 protocol.</li> </ul>
<b>Software Status</b>	Indicates actual software status.
<b>System Up Time</b>	Indicates actual system time and uptime since last reboot.
<b>PPPoE Link Up</b>	Indicates PPPoE connection status.
<b>NAT</b>	Indicates type of NAT when it's configured.

<b>Port Status</b>	Displays relevant information regarding the FXS port about its registration, DND and call forward features.
<b>Port Options</b>	Displays relevant information regarding the FXS port about its DND and call forward features.
<b>Provision</b>	Displays provisioning status.
<b>Core Dump</b>	Provides generated core dump file if unit malfunctions. <b>Clean</b> will be displayed if no issues.
<b>GR909</b>	Click on “Test Page” to be redirected to lines tests page (Hazardous Potential, Foreign Electromotive Forces, Resistive Faults, Receiver Off hook and Ringer Equivalent Number )

## Basic Settings Page Definitions

Table 7: Basic Settings Page

Basic Settings	
<b>New End User Password</b>	Configures user level password. Case sensitive and max. length of 25 characters.
<b>Confirm End User Password</b>	Re-enter the end user password to confirm change user password on web GUI to avoid typo or mistakes.
<b>Web Port</b>	Customizes HTTP port used to access the HT801 web UI. Default is <b>80</b> .
<b>Telnet Server</b>	Enables / Disables access via telnet. Default is <b>Yes</b> (activated).
<b>IP Address</b>	Specifies IP Address to use on HT801. There are three modes to operate the HT801: <ul style="list-style-type: none"> <li>• <b>DHCP mode:</b> all the field values for the static IP mode are not used (even though they are still saved in the flash memory.) The HT801 acquires its IP address from the first DHCP server it discovers from the LAN it is connected.</li> <li>• <b>Use PPPoE:</b> set the PPPoE account settings. If selected, HT801 attempt to establish a PPPoE session if any of the PPPoE fields is set.</li> <li>• <b>Static IP mode:</b> configure IP address, subnet Mask, default router IP address, 1<sup>st</sup> preferred DNS server, 2<sup>nd</sup> preferred DNS server. These fields are set to zero by default.</li> </ul>
<b>DHCP hostname</b>	Specifies the name of the client. The name may or may not be qualified with the local domain name. This field is optional but may be required by ISP.
<b>DHCP vendor class</b>	Exchanges vendor class ID by clients and servers to convey particular configuration

<b>ID</b>	or other identification information about a client. Default is <b>HT8XX</b> .
<b>PPPoE account ID</b>	Defines the PPPoE username. Necessary if ISP requires you to use a PPPoE (Point to Point Protocol over Ethernet) connection.
<b>PPPoE password</b>	Specifies the PPPoE account password.
<b>PPPoE Service Name</b>	Defines PPPoE service name. If your ISP uses a service name for the PPPoE connection, enter the service name here. This field is optional. Default is blank.
<b>Preferred DNS server</b>	Specifies preferred DNS server to use when DHCP or PPPoE are set.
<b>Time Zone</b>	Selects time zone to define date/time on the device.
<b>Self-Defined Time Zone</b>	Allows users to define their own time zone.
<b>Allow DHCP server to set Time Zone</b>	Obtains time zone setting (offset) from a DHCP server using DHCP Option 2; it will override selected time zone. If set to “No”, the analogue adapter will use selected time zone even if provided by DHCP server. The Default setting is <b>Yes</b> .
<b>Language</b>	Configures the languages of the voice prompt and web interface, except Spanish that it is only in IVR. Available languages: English, Chinese or Spanish IVR.
<b>Reset Type</b>	<p>Gives the administrator the option to restore default configuration on the HT801. There are 3 types of factory reset:</p> <ul style="list-style-type: none"> <li>• <b>ISP Data Reset:</b> All VoIP related configuration (mainly everything located on FXS page).</li> <li>• <b>VOIP Data Reset:</b> All ISP (Internet Service Provider) configuration which may affect the IP address.</li> <li>• <b>Full Reset:</b> Both VoIP and ISP related configuration at the same time.</li> </ul> <p><b>Note:</b> After you choose the reset type, you will have to click the reset button to take effect.</p>

## Advanced Settings Page Definitions

Table 8: Advanced Settings

Advanced Settings	
<b>New Admin Password</b>	Defines the administrator level password to access the Advanced Web Configuration page. This field is case sensitive. Only the administrator can configure the “Advanced

	Settings" page. Password field is purposely left blank for security reasons after clicking update and saved. Max. length is 25 characters.
<b>Confirm Admin Password</b>	Confirms the new admin password.
<b>Layer 2 QoS</b>	Sets values for 802.1Q/VLAN Tag. Default is <b>0</b> . Valid range is 0-4094. SIP 802.1p. Default is <b>0</b> . Valid range is 0-7. RTP 802.1p. Default is <b>0</b> . Valid range is 0-7.
<b>STUN Server is</b>	Configures IP address or domain name of STUN server. Only non-symmetric NAT routers work with STUN.
<b>Keep-alive interval</b>	Sends periodically a blank UDP packet to SIP server in order to keep the "ping hole" on the NAT router open. Default is <b>20</b> seconds.
<b>Use STUN to detect network connectivity</b>	Uses STUN keep-alive to detect WAN side network problems. If keep-alive request does not yield any response for configured number of times (minimum 3), the device will restart the TCP/IP stack. If the STUN server does not respond when the device boots up, the feature is disabled. Default setting is <b>No</b> .
<b>Use DNS to detect network connectivity</b>	Uses DNS to detect WAN side network problems. Default setting is <b>No</b> .
<b>Verify host when using HTTPS</b>	Enables / disables the host verification when using HTTPS.
<b>Upgrade via</b>	Selects firmware upgrade/provisioning method: TFTP, HTTP or HTTPS.
<b>Firmware Server Path</b>	Sets IP address or FQDN of firmware server. The URL of the server that hosts the firmware release. Default is <b>fm.grandstream.com/gs</b> .
<b>Config Server Path</b>	Sets IP address or FQDN of configuration server. The URL of the server that hosts the configuration file to provision HT801. Default is <b>fm.grandstream.com/gs</b> .
<b>XML Config File Password</b>	Decrypts XML configuration file when encrypted. The password used for encrypting the XML configuration file using OpenSSL.
<b>HTTP/HTTPS User Name</b>	Enters user name to authenticate with HTTP/HTTPS server.
<b>HTTP/HTTPS Password</b>	Enters password to authenticate with HTTP/HTTPS server.

<b>Firmware File Prefix</b>	Checks if firmware file is with matching prefix before downloading it. This field enables user to store different versions of firmware files in one directory on the firmware server.
<b>Firmware File Postfix</b>	Checks if firmware file is with matching postfix before downloading it. This field enables user to store different versions of firmware files in one directory on the firmware server.
<b>Config File Prefix</b>	Checks if configuration files are with matching prefix before downloading them. This field enables user to store different configuration files in one directory on the provisioning server.
<b>Config File Postfix</b>	Checks if configuration files are with matching postfix before downloading them. This field enables user to store different configuration files in one directory on the provisioning server.
<b>Allow DHCP Option 66 to Override Server</b>	Obtains configuration and upgrade server's information using options 66 from DHCP server. <b>Note:</b> If DHCP Option 66 is enabled, the HT801 will attempt downloading the firmware file from the server URL provided by DHCP, even though <b>Config Server Path</b> is left blank
<b>3CX Auto Provision</b>	Sends multicast "SUBSCRIBE" message for provisioning at booting stage, used for PnP (Plug-and-Play) configuration. Default is <b>Yes</b> .
<b>Automatic Upgrade</b>	Specifies when the firmware upgrade process will be initiated; there are 4 options: <ul style="list-style-type: none"> <li>• <b>No</b>: The HT801 will only do upgrade once at boot up. Default is <b>No</b>.</li> <li>• <b>Check every X minutes</b>: User needs to specify a period in minutes.</li> <li>• <b>Check every day</b>: User needs to specify "Hour of the day (0-23)".</li> <li>• <b>Check every week</b>: User needs to specify "Hour of the day (0-23)" and "Day of the week (0-6)". (Day of week is starting from Sunday).</li> </ul>
<b>Always Check for New Firmware at Boot up</b>	Configures the HT801 to always search the new firmware at boot up.
<b>Check New Firmware only when F/W pre/suffix changes</b>	Permits the HT801 to search for the new firmware when the firmware prefix / suffix changes.
<b>Always Skip the Firmware Check</b>	Configures the HT801 to skip the firmware check.
<b>Disable SIP NOTIFY Authentication</b>	Disables the SIP NOTIFY Authentication on the phone. If set to "Yes", the phone will not challenge NOTIFY with 401. The default setting is " <b>No</b> "

<b>Authenticate Conf File</b>	Authenticates configuration before being accepted. This protects the configuration from unauthorized modifications. Default is <b>No</b> .
<b>SIP TLS Certificate</b>	Specifies SSL certificate used for SIP over TLS is in X.509 format. The HT801 has built-in private key and SSL certificate.
<b>SIP TLS Private Key</b>	Specifies TLS private key used for SIP over TLS is in X.509 format.
<b>SIP TLS Private Key Password</b>	Specifies SSL Private key password used for SIP Transport in TLS/TCP.
<b>Enable TR-069</b>	Sets the phone system to enable the "CPE WAN Management Protocol" (TR-069). Default setting is <b>No</b> .
<b>ACS URL</b>	Specifies URL of TR-069 Auto Configuration Servers (e.g., <a href="http://acs.mycompany.com">http://acs.mycompany.com</a> ), or IP address.
<b>ACS Username</b>	Enters username to authenticate to ACS.
<b>ACS Password</b>	Enters password to authenticate to ACS.
<b>Periodic Inform Enable</b>	Sends periodic inform packets to ACS. Default is <b>No</b>
<b>Periodic Inform Interval</b>	Sets frequency that the inform packets will be sent out to ACS.
<b>Connection Request Username</b>	Enters username for ACS to connect to the HT801.
<b>Connection Request Password</b>	Enters password for ACS to connect to the HT801.
<b>CPE SSL Certificate</b>	Configures the Cert File for the phone to connect to the ACS via SSL.
<b>CPE SSL Private Key</b>	Specifies the Cert Key for the phone to connect to the ACS via SSL.
<b>System Ring Cadence</b>	Sets ring cadences for all incoming calls. Syntax: c=on1/off1-on2/off2-on3/off3;) Default is set to c=2000/4000; (US standards), on1 is the period of ringing ("On time" in "ms") while off1 is the period of silence. Up to three cadences are supported.
<b>Call Progress</b>	Configures tone frequencies according to user preference. By default, the tones are set

<b>Tones</b>	<p>to North American frequencies. Frequencies should be configured with known values to avoid uncomfortable high pitch sounds. ON is the period of ringing (ON time in ms) while OFF is the period of silence. In order to set a continuous ring, OFF should be zero. Otherwise it will ring ON ms and a pause of OFF ms and then repeats the pattern.</p> <ul style="list-style-type: none"> <li>• “Dial tone”</li> <li>• “Ring back tone”</li> <li>• “Busy tone”</li> <li>• “Reorder tone”</li> <li>• “Confirmation tone”</li> <li>• “Call-Waiting tone”</li> <li>• “Prompt Tone”</li> </ul> <p>Please refer to the document below to determine your local call progress tones:  <a href="http://www.itu.int/ITU-T/inr/forms/files/tones-0203.pdf">http://www.itu.int/ITU-T/inr/forms/files/tones-0203.pdf</a></p>
<b>Prompt Tone Access Code</b>	Specifies the key pattern to get Prompt Tone. Maximum 20 digits
<b>Lock Keypad Update</b>	Locks configuration update via keypad. Default is <b>No</b> .
<b>Disable Voice Prompt</b>	Removes ability to use integrated voice prompt menu configuration. Default is <b>No</b> .
<b>Disable Direct IP Call</b>	Deactivates Direct IP-to-IP calling function. Default is <b>No</b> .
<b>NTP Server</b>	Defines URL or IP address of the NTP (Network Time Protocol). Used by the HT801 to synchronize the date and time. Public NTP servers can be found at <a href="http://www.ntp.org">http://www.ntp.org</a> .
<b>Allow DHCP Option 42 to NTP Server</b>	Obtains NTP server address from a DHCP server using DHCP Option 42; it will override configured NTP Server. If set to “No”, the HT801 will use configured NTP server to synchronize time and date even if a NTP server is provided by DHCP server. Default is <b>Yes</b> .
<b>Syslog Server</b>	Sets IP address or URL of system log server. The server collects system log information from the HT801.
<b>Syslog Level</b>	<p>Selects log level; the level is one of DEBUG, INFO, WARNING, ERROR. Syslog messages are sent based on the following events. Default is <b>NONE</b>:</p> <ol style="list-style-type: none"> <li>1. product model/version on boot up (INFO level)</li> <li>2. NAT related info (INFO level)</li> </ol>

	<ol style="list-style-type: none"> <li>3. sent or received SIP message (DEBUG level)</li> <li>4. SIP message summary (INFO level)</li> <li>5. inbound and outbound calls (INFO level)</li> <li>6. registration status change (INFO level)</li> <li>7. negotiated codec (INFO level)</li> <li>8. Ethernet link up (INFO level)</li> <li>9. SLIC chip exception (WARNING and ERROR levels)</li> <li>10. memory exception (ERROR level)</li> </ol> <p>The Syslog uses USER facility. In addition to standard Syslog payload, it contains the following components: GS_LOG: [device MAC address] [error code] error message.  <b>Example:</b> May 19 02:40:38 192.168.1.14 GS_LOG: [00:0b:82:00:a1:be][000] Ethernet link is up</p>
<b>Send SIP Log</b>	Configures the HT801 to send a replicate of the SIP packets on the syslog. Default is <b>No</b>
<b>Download Device Configuration</b>	Downloads actual device configuration file in .xml format.
<b>Download Device XML Configuration</b>	Downloads actual device configuration file in .xml format.
<b>Upload Firmware</b>	Allows the user to upgrade the firmware with a single firmware file by browsing and loading the file from your computer (local directory).
<b>Upload Configuration</b>	Allows users to upload the configuration file by browsing and loading it from computer (local directory).

## FXS Port Page Definitions

Table 9: FXS Port

FXS Port	
<b>Accounts Active</b>	Activates / Deactivates the accounts.
<b>Primary SIP Server</b>	Configures SIP server IP address or domain name provided by VoIP service provider. This is the primary SIP server used to send/receive SIP messages from/to HT801.
<b>Failover SIP Server</b>	Specifies failover SIP server IP address or domain name provided by VoIP service provider. This server will be used if the primary SIP server becomes unavailable.
<b>Prefer Primary SIP Server</b>	Selects to prefer primary SIP server. The account will register to primary Server if registration with Failover server expires. Default is <b>No</b> .

<b>Outbound Proxy</b>	Specifies IP address or domain name of outbound Proxy, or media gateway, or session border controller. Used by HT801 for firewall or NAT penetration in different network environments. If symmetric NAT is detected, STUN will not work and only outbound proxy can correct the problem.
<b>Allow DHCP Option 120 (override SIP Server)</b>	Configures the HT801 to collect SIP server address from DHCP option 120. Default is <b>No</b>
<b>SIP transport</b>	Selects transport protocol for SIP packets; UDP or TCP or TLS. Please make sure your SIP Server or network environment supports SIP over the selected transport method. Default is <b>UDP</b> .
<b>NAT Traversal</b>	Indicates type of NAT for each account. (Based on STUN protocol.)
<b>SIP User ID</b>	Defines user account information provided by VoIP service provider (ITSP). Usually in the form of digit similar to phone number or actually a phone number.
<b>Authenticate ID</b>	Determines account authenticate ID provided by VoIP service provider (ITSP). Can be identical to or different from "SIP user ID".
<b>Authenticate Password</b>	Specifies account password provided by VoIP service provider (ITSP) to register to SIP servers.
<b>Name</b>	Chooses a name to be associated to user.
<b>DNS Mode</b>	<p>Selects DNS mode to use for the client to look up server. One mode can be chosen.</p> <ul style="list-style-type: none"> <li>• <b>A Record:</b> resolves IP Address of target according to domain name.</li> <li>• <b>SRV:</b> DNS SRV resource records indicate how to find services for various protocols.</li> <li>• <b>NAPTR/SRV:</b> Naming Authority Pointer according to RFC 2915.</li> <li>• <b>Use Configured IP:</b> If selected, please fill in Primary IP, Backup IP 1 and Backup IP 2 to be used for server look up. Default is <b>A Record</b>.</li> </ul>
<b>TEL URI</b>	<p>Indicates E.164 number in "From" header by adding "User=Phone" parameter or using "Tel:" in SIP packets, if the HT801 has an assigned PSTN Number.</p> <ul style="list-style-type: none"> <li>• <b>Disabled:</b> Use "SIP User ID" information in the Request-Line and "From" header.</li> <li>• <b>User=Phone:</b> "User=Phone" parameter will be attached to the Request-Line and "From" header in the SIP request to indicate the E.164 number. If set to</li> </ul>

	<p>"Enable".</p> <ul style="list-style-type: none"> <li>• <b>Enabled:</b> "Tel:" will be used instead of "sip:" in the SIP request.</li> </ul> <p>Please consult your carrier before changing this parameter. Default is <b>Disabled</b>.</p>
<b>SIP Registration</b>	Shows the status of SIP registration. If the SIP account is successfully registered, it will display "YES" with green background. If the SIP account is not registered, it will display "NO" with red background.
<b>Unregister on Reboot</b>	Controls whether to clear SIP user's information by sending un-register request to the proxy server. The un-registration is performed by sending a REGISTER message with Contact set to * and Expires=0 parameters to the SIP server. This will unregister the SIP account the FXS Port. Default is <b>No</b> .
<b>Outgoing Call Without Registration</b>	Enables the ability to place outgoing calls even when not registered (if allowed by ITSP); device will not be to receive incoming calls. Default is <b>No</b> .
<b>Register Expiration</b>	Refreshes registration periodically with specified SIP proxy (in minutes). Maximum interval is 65535 minutes (about 45 days). Default is <b>60</b> minutes (or 1 hour).
<b>Reregister Before Expiration</b>	Sends re-register request after specific time (in seconds) to renew registration before the previous registration expires.
<b>SIP Registration Failure Retry Wait Time</b>	Sends re-register request after specific time (in seconds) when registration process fails. Maximum interval is 3600 seconds (1 hour). Default is <b>20</b> seconds.
<b>SIP Registration Failure Retry Wait Time upon 403 Forbidden</b>	Sends re-register request after specific time (in seconds) when registration process fails with error 403 Forbidden. Maximum interval is 3600 seconds (1 hour). Default is <b>1220</b> seconds.
<b>Enable SIP OPTIONS Keep Alive</b>	Enables SIP OPTIONS to track account registration status so the phone will send periodic OPTIONS message to server to track the connection status with the server. Default setting is " <b>No</b> "
<b>SIP OPTIONS Keep Alive Interval</b>	Configures the time interval when the phone send OPTIONS message to SIP server. The default setting is 30 seconds, which means the phone will send an OPTIONS message to the server every 30 seconds. The default range is 1-64800
<b>SIP OPTIONS Keep Alive Max Lost</b>	Defines the (Number of max lost packets for SIP OPTIONS Keep Alive before re-registration. Between 3-10, default is 3)

<b>Layer 3 QoS</b>	Defines Diff-Serv values for SIP and RTP. Defaults are: SIP Diff-Serv: <b>26</b> / RTP Diff-Serv: <b>46</b>
<b>Local SIP Port</b>	Defines local port to use by the HT801 for listening and transmitting SIP packets. Default value for FXS is 5060.
<b>Local RTP Port</b>	Defines the local RTP-RTCP port pair the HT801 will listen and transmit. It is the HT801 RTP port for channel 0. The default value for FXS port is <b>5004</b> .
<b>Use Random SIP Port</b>	Controls whether to use configured or random SIP ports. This is usually necessary when multiple HT801 are behind the same NAT. Default is <b>No</b> .
<b>Use Random RTP Port</b>	Controls whether to use configured or random SIP ports. This is usually necessary when multiple HT801 are behind the same NAT. Default is <b>No</b> .
<b>Hold Target Before Refer</b>	Allows user to hold the phone call before refer it. If set to No, the call will not be hold before referred. Default is <b>Yes</b> .
<b>Refer-To Use Target Contact</b>	Includes target's "Contact" header information in "Refer-To" header when using attended transfer. Default is <b>No</b> .
<b>Transfer on Conference Hang-up</b>	If the conference originator hangs up the conference will be terminated, and this option is enabled, the originator will transfer other parties to each other so they can choose to either continue the conversation or hang-up. Default is <b>No</b>
<b>Disable Bellcore Style 3-Way Conference</b>	Gives the users the possibility of making conference calls by pressing "Flash" key, when it's enabled by dialing *23 +second callee number. Default is <b>No</b>
<b>Remove OBP from Route Header</b>	Removes outbound proxy info in "Route" header when sending SIP packets. Default is <b>No</b> .
<b>Support SIP Instance ID</b>	Includes "SIP Instance ID" attribute to "Contact" header in REGISTER request as defined in IETF SIP outbound draft. Default is <b>No</b> .
<b>Validate Incoming Messages</b>	Validates incoming messages. Default is <b>No</b> .
<b>Check SIP User ID for Incoming INVITE</b>	Checks SIP User ID in the Request URI of incoming INVITE; if it doesn't match the HT801 SIP User ID, the call will be rejected. Direct IP calling will also be disabled. Default is <b>No</b> .
<b>Authenticate Incoming INVITE</b>	Challenges the incoming INVITE for authentication with SIP 401 Unauthorized message. Default is <b>No</b> .

<b>Authenticate server certificate domain</b>	Configures whether to validate the domain certificate when download the firmware/config file. If it is set to "Yes", the phone will download the firmware/config file only from the legitimate server. The default setting is <b>"No"</b> .
<b>Authenticate server certificate chain</b>	Configures whether to validate the server certificate when download the firmware/config file. If it is set to "Yes", the phone will download the firmware/config file only from the legitimate server. The default setting is <b>"No"</b> .
<b>Trusted CA Certificates</b>	Uses the certificate for Authentication if "Check Domain Certificates" is set to "Yes" under "Account" -> "SIP Settings".
<b>Allow Incoming SIP Messages from SIP Proxy Only</b>	Checks SIP address of the Request URI in the incoming SIP message; if it doesn't match the SIP server address of the account, the call will be rejected. Default is <b>No</b> .
<b>Use Privacy Header</b>	Adds "Privacy" header if special feature is set to "Default", and not "CBCOM".
<b>Use P-Preferred-Identity Header</b>	Adds "PPI" header if special feature is set to "Default", and not "CBCOM".
<b>SIP REGISTER Contact Header Uses</b>	Specify which address (LAN or WAN address) the device will detect to use it in SIP Register Contact Header. Default is <b>LAN Address</b> .
<b>SIP T1 Timeout</b>	Defines T1 timeout value. It is an estimate of the round-trip time between the client and server transactions. For example, the HT801 will attempt to send a request to a SIP server. The time it takes between sending out the request to the point of getting a response is the SIP T1 timer. If no response is received the timeout is increased to (2*T1) and then (4*T1). Request re-transmit retries would continue until a maximum amount of time defined by T2. Default is <b>0.5</b> seconds.
<b>SIP T2 Interval</b>	Identifies maximum retransmission interval for non-INVITE requests and INVITE responses. Retransmitting and doubling of T1 continues until it reaches T2 value. Default is <b>4</b> seconds.
<b>SIP Timer D</b>	Configure the SIP Timer D defined in RFC3261. 0 - 64 seconds. Default 0
<b>DTMF Payload Type</b>	Defines payload type for DTMF using RFC2833.
<b>Preferred DTMF method (in order)</b>	Sorts DTMF methods (in-audio, via RTP (RFC2833) or via SIP INFO) by priority.

<b>Disable DTMF Negotiation</b>	Uses above DTMF order without negotiation. Default is <b>No</b> .
<b>Generate Continuous RFC2833 Events</b>	When enabled the RFC2833 events are generated until key is released. Default is <b>No</b> .
<b>Send Hook Flash Event</b>	Default is <b>No</b> . If set to yes, flash will be sent as DTMF event.
<b>Flash Digit Control</b>	Overrides the default settings for call control when both channels are in use
<b>Enable Call Features</b>	Enables do not disturb, call forward and other call features via the local feature codes on the base. Otherwise, ITSP feature codes can be used. Default is <b>Yes</b> .
<b>Off Hook Auto Dial</b>	Configures a user ID or extension number that is automatically dialed when off-hook. Only the user part of a SIP address needs to be entered. The HT801 will automatically append the "@" and the host portion of the corresponding SIP address.
<b>Off Hook Auto Dial Delay</b>	Specifies the auto-dial delay after off hook.
<b>Proxy-Require</b>	Determines a SIP Extension to notify the SIP server that the HT801 is behind a NAT/Firewall.
<b>Use NAT IP</b>	Defines NAT IP address used in SIP/SDP messages. It should only be used if required by ITSP.
<b>Use SIP User Agent Header</b>	Configures the SIP User-Agent Header.
<b>Distinctive Ring Tone</b>	<p>Customizes the Ring Tone 1 to 3 with associate caller ID: when selected, if caller ID is configured, then the device will ONLY use this ring tone when the incoming call is from the Caller ID. System Ring Tone is used for all other calls. When selected but no Caller ID is configured, the selected ring tone will be used for all incoming calls using the FXS port. Distinctive ring tones can be configured not only for matching a whole number, but also for matching prefixes. In this case symbol * (star) will be used.</p> <p><b>For example:</b> If configured as *617, Ring Tone 1 will be used in case of call arrived from the area code 617. Any other incoming call will ring using cadence defined in parameter System Ring Cadence located under Advanced Settings Configuration page.</p> <p><b>Note:</b> If server supports Alert-Info header and standard ring tone set (Bellcore) or distinctive ring tone 1-10 is specified, then the ring tone in the Alert-Info header from</p>

	server will be used. Bellcore rings and tones are independent from custom ring tones. The custom ring tones can also be specified by alert-info header, for example Alert-Info: ;info=ring5
<b>Disable Call Waiting</b>	Disables receiving a second incoming call when the line is engaged. Default is <b>No</b> .
<b>Disable Call Waiting Caller ID</b>	Disables displaying caller ID when receiving a second incoming call. Default is <b>No</b> .
<b>Disable Call Waiting Tone</b>	Disables playing call waiting tone during active call when receiving a second incoming call. The CWCID will still be displayed. Default is <b>No</b> .
<b>Disable Connected Line ID</b>	Disables displaying the number of the person answering the phone. Default is <b>No</b> .
<b>Disable Receiver Off hook Tone</b>	Enables / disables the warning to alert that the phone has been left off-hook for an extended period of time. Default is <b>No</b> .
<b>Disable Reminder Ring for On-Hold Call</b>	Enables playing the reminder ring. Default is <b>No</b>
<b>Disable Visual MWI</b>	Disables use of visual message waiting indicator when there is an unread voicemail message. Default is <b>No</b> .
<b>Do Not Escape '#' as %23 in SIP URI</b>	Replaces # by %23 in some special situations. Default is <b>No</b> .
<b>Disable Multiple m Line in SDP</b>	Sends only one m line in SDP, regardless of how many m fields are in the incoming SDP. Default is <b>No</b> .
<b>Ring Timeout</b>	Stops ringing when incoming call if not answered within a specific period of time. Default is <b>60</b> seconds.
<b>Delayed Call Forward Wait Timeout</b>	Forwards incoming call if not answered within a specific period of time when delayed call forward is activated locally (using *92 code). Default value is <b>20</b> seconds.
<b>No Key Entry Timeout</b>	Initiates the call within this time interval if no additional key entry during dialing stage. Default is <b>4</b> seconds.
<b>Early Dial</b>	Sends an early INVITE each time a key is pressed when a user dials a number. Otherwise, only one INVITE is sent after full number is dialed (user presses <b>Dial Key</b> or after "no key entry timeout" expires). This option should be used only if there is a SIP

	<p>proxy is configured and supporting 484 responses (Incomplete Address). Otherwise, the call will likely be rejected by the proxy (with a 404 Not Found error). Default is <b>No</b>.</p> <p><u><i>This feature is NOT designed to work with and should NOT be enabled for direct IP-to-IP calling.</i></u></p>
<b>Dial Plan Prefix</b>	Adds specified prefix to dialed number.
<b>Use # as Dial Key</b>	Treats “#” as the “Send” (or “Dial”) key. If set to “No”, this “#” key can be included as part of the dialed number. Default is <b>Yes</b> .
<b>Dial Plan</b>	<p><b>Dial Plan Rules:</b></p> <ol style="list-style-type: none"> <li>Accept Digits: 1,2,3,4,5,6,7,8,9,0 , *, #, A,a,B,b,C,c,D,d</li> <li>Grammar: <b>x</b> - any digit from 0-9;             <ol style="list-style-type: none"> <li>xx+ - at least 2 digits number;</li> <li>xx – exactly 2 digits number;</li> <li>^ - exclude;</li> <li>. – wildcard, matches one or more characters</li> <li>[3-5] - any digit of 3, 4, or 5;</li> <li>[147] - any digit 1, 4, or 7;</li> <li>&lt;2=011&gt; - replace digit 2 with 011 when dialing</li> <li>&lt;=1&gt; - add a leading 1 to all numbers dialed, vice versa will remove a 1 from the number dialed</li> <li>  - or</li> </ol> </li> </ol> <ul style="list-style-type: none"> <li><b>Example 1:</b> {[369]11   1617xxxxxxx} – Allow 311, 611, 911, and any 10 digit numbers of leading digits 1617</li> <li><b>Example 2:</b> {^1900x+   &lt;=1617&gt;xxxxxxx} – Block any number with leading digits 1900 and add prefix 1617 for any dialed 7 digit numbers</li> <li><b>Example 3:</b> {1xxx[2-9]xxxxxx   &lt;2=011&gt;x+} – Allow any length of number with leading digit 2 and 10 digit-numbers of leading digit 1 and leading exchange number between 2 and 9; If leading digit is 2, replace leading digit 2 with 011 before dialing.</li> </ul> <ol style="list-style-type: none"> <li>Default: Outgoing - {x+}</li> </ol> <p><u>Example of a simple dial plan used in a Home/Office in the US:</u></p> <p><b>{ ^1900x.   &lt;=1617&gt;[2-9]xxxxxx   1[2-9]xx[2-9]xxxxxx   011[2-9]x.   [3469]11 }</b></p> <p><b>Explanation</b> of example rule (reading from left to right):</p> <ul style="list-style-type: none"> <li><b>^1900x.</b> - prevents dialing any number started with 1900</li> </ul>

	<ul style="list-style-type: none"> <li>• <b>&lt;=1617&gt;[2-9]xxxxxx</b> - allows dialing to local area code (617) numbers by dialing 7 numbers and 1617 area code will be added automatically</li> <li>• <b>1[2-9]xx[2-9]xxxxxx</b> - allows dialing to any US/Canada Number with 11 digits length</li> <li>• <b>011[2-9]x.</b> - allows international calls starting with 011</li> <li>• <b>[3469]11</b> - allow dialing special and emergency numbers 311, 411, 611 and 911</li> </ul> <p><b>Note:</b> In some cases, user wishes to dial strings such as *123 to activate voice mail or other application provided by service provider. In this case * should be predefined inside dial plan feature. An example dial plan will be: { *x+ } which allows the user to dial * followed by any length of numbers.</p>
<b>SUBSCRIBE for MWI</b>	Sends SUBSCRIBE periodically (depends on “Register Expiration” parameter) for message waiting indication. Default is <b>No</b> .
<b>Send Anonymous</b>	Sets “From”, “Privacy” and “P_Asserted_Identity” headers in outgoing INVITE message to “anonymous”, blocking caller ID. Default is <b>No</b> .
<b>Anonymous Call Rejection</b>	Rejects incoming calls with anonymous caller ID with “486 Busy here” message. Default is <b>No</b> .
<b>Special Feature</b>	Selects Soft switch vendors’ special requirements Example of vendors: Broadsoft, CBCOM, RNK, Huawei, ZTE IME, PhonePower, Metaswitch. Default is <b>Standard</b> .
<b>Session Expiration</b>	<p>Enables SIP sessions to be periodically “refreshed” via a SIP request (UPDATE, or re-INVITE). When the session interval expires, if there is no refresh via an UPDATE or re-INVITE message, the session will be terminated.</p> <p>Session Expiration is the time (in seconds) at which the session is considered timed out, if no successful session refresh transaction occurs beforehand. Default is <b>180</b> seconds.</p>
<b>Min-SE</b>	Defines Minimum session expiration (in seconds). Default is <b>90</b> seconds.
<b>Caller Request Timer</b>	Uses session timer when making outbound calls if remote party supports it. Default is <b>No</b> .
<b>Callee Request Timer</b>	Uses session timer when receiving inbound calls with session timer request. Default is <b>No</b> .
<b>Force Timer</b>	<p>Uses session timer even if the remote party does not support this feature. Selecting “No” will enable session timer only when the remote party supports it. Default is <b>No</b>.</p> <p>To turn off Session Timer, select “No” for Caller and Callee Request Timer, and Force Timer.</p>

<b>UAC Specify Refresher</b>	Specifies which end will act as refresher for outgoing calls. Default is <b>Omit.</b> : <ul style="list-style-type: none"> <li>• <b>UAC</b>: The handy tone acts as the refresher.</li> <li>• <b>UAS</b>: Callee or proxy server act as the refresher.</li> </ul>
<b>UAS Specify Refresher</b>	Specifies which end will act as refresher for incoming calls. Default is <b>Omit.</b> : <ul style="list-style-type: none"> <li>• <b>UAS</b>: The handy tone acts as the refresher.</li> <li>• <b>UAC</b>: Callee or proxy server act as the refresher.</li> </ul>
<b>Force INVITE</b>	Uses INVITE message to refresh the session timer. Default is <b>No</b> .
<b>Enable 100rel</b>	Appends "100rel" attribute to the value of the required header of the initial signaling messages. Default is <b>No</b> .
<b>Add Auth Header on Initial REGISTER</b>	Adds "Authentication" header with blank "nonce" attribute in the initial SIP REGISTER request. Default is <b>No</b> .
<b>Use First Matching Vocoder in 200OK SDP</b>	Includes only the first matching vocoder in its 200OK response, otherwise it will include all matching vocoders in same order received in INVITE. Default is <b>No</b> .
<b>Preferred Vocoder</b>	Configures vocoders in a preference list (up to 7 preferred vocoders) that will be included with same order in SDP message. Vocoder types are G.711 A-/U-law, G.722, G.726-32, G.723, G.729, iLBC and OPUS
<b>Voice Frames per TX</b>	Transmits a specific number of voice frames per packet. Default is <b>2</b> ; increases to 10/20/32/64 for G711/G726/G723/other codecs respectively.
<b>G723 Rate</b>	Operates at specified encoding rate for G.723 vocoder. Available encoding rates are 6.3kbps or 5.3kbps. Default is <b>6.3kbps</b> .
<b>iLBC Frame Size</b>	Specifies iLBC packet frame size (20ms or 30ms). Default is <b>20ms</b> .
<b>Disable OPUS Stereo in SDP</b>	Disables OPUS stereo in SDP. Default is <b>No</b> .
<b>iLBC Payload type</b>	Determines payload type for iLBC. Valid range is between 96 and 127. Default is <b>97</b> .
<b>OPUS Payload Type</b>	Determines payload type for OPUS. Valid range is between 96 and 127. Default is <b>123</b> .
<b>VAD</b>	Allows detecting the absence of audio and conserves bandwidth by preventing the transmission of "silent packets" over the network. Default is <b>No</b> .
<b>Symmetric RTP</b>	Changes the destination to send RTP packets to the source IP address and port of the inbound RTP packet last received by the device. Default is <b>No</b> .

<b>Fax Mode</b>	Specifies the fax mode : T.38 (Auto Detect) FoIP by default, or Pass-Through (must use codec PCMU/PCMA)
<b>Re-Invite after Fax Tone Detection Mode</b>	Permits the unit to send out the re-INVITE for T.38 or Fax Pass Through if a fax tone is detected. Default is <b>Enabled</b>
<b>Jitter Buffer Type</b>	Selects jitter buffer type (Fixed or Adaptive) based on network conditions.
<b>Jitter Buffer Length</b>	<ul style="list-style-type: none"> <li>• <b>High</b> (initial 200ms, min 40ms, max 600ms) Note: not all vocoders can meet the high requirement.</li> <li>• <b>Medium</b> (initial 100ms, min 20ms, max 200ms).</li> <li>• <b>Low</b> (initial 50ms, min 10ms, max 100ms).</li> </ul>
<b>SRTP Mode</b>	<p>Selects SRTP mode to use ("Disabled", "Enabled but not forced", or "Enabled and forced"). Default is <b>Disabled</b>.</p> <p>It uses SDP Security Description to exchange key. Please refer to            SDES: <a href="https://tools.ietf.org/html/rfc4568">https://tools.ietf.org/html/rfc4568</a>            SRTP: <a href="https://www.ietf.org/rfc/rfc3711.txt">https://www.ietf.org/rfc/rfc3711.txt</a></p>
<b>Crypto Life Time</b>	Adds crypto life time header to SRTP packets. Default is <b>Yes</b> .
<b>SLIC Setting</b>	Depends on standard phone type (and location).
<b>Caller ID Scheme</b>	Selects the caller id scheme, for example : Bellcore/Telcordia, ETSI-FSK ...
<b>DTMF Caller ID</b>	Defines the start and stop tones.
<b>Polarity Reversal</b>	Reverses the polarity upon call establishment and termination. Default is <b>No</b> .
<b>Loop Current Disconnect</b>	Allows the traditional PBX used with HT801 to apply this method for signaling call termination. Method initiates short voltage drop on the line when remote (VoIP) side disconnects an active call. Default is <b>No</b> .
<b>Loop Current Disconnect Duration</b>	Configures the duration of voltage drop described in topic above. HT801 supports a duration range from 100 to 10000 ms. Default value is <b>200</b> .
<b>Enable Hook Flash</b>	Enables the FLASH button to be used for terminating calls. Default is <b>Yes</b> .
<b>Hook Flash Timing</b>	<p>Defines the time period when the cradle is pressed (Hook Flash) to simulate FLASH. To prevent unwanted activation of the Flash/Hold and automatic phone ring-back, adjust this time value. HT801 supports a range from 40 to 2000 ms. Default values are <b>300</b> minimum and <b>1100</b> maximum.</p>

<b>On Hook Timing</b>	Specifies the on-hook time for an on-hook event to be validated. HT801 supports a range from 40 to 2000 ms. Default value is <b>400</b> .
<b>Gain</b>	<p>Adjusts the voice path volume.</p> <ul style="list-style-type: none"> <li>• <b>Rx</b> is a gain level for signals transmitted by FXS</li> <li>• <b>Tx</b> is a gain level for signals received by FXS.</li> </ul> <p>Default = 0dB for both parameters. Loudest volume: +6dB Lowest volume: -6dB.</p> <p>User can adjust volume of call using the Rx gain level parameter and the Tx gain level parameter located on the FXS port configuration page.</p> <p>If call volume is too low when using the FXS port (ie. the ATA is at user site), adjust volume using the Rx gain level parameter under the FXS port configuration page.</p> <p>If voice volume is too low at the other end, user may increase the far end volume using the Tx gain level parameter under the FXS port configuration PAGE.</p>
<b>Disable Line Echo Canceller</b>	Disables the LEC will per call base. Recommended for FAX/Data calls. Default is <b>No</b> .
<b>Disable Network Echo Suppressor</b>	Disables the NEC will per call base. Recommended for FAX/Data calls. Default is <b>No</b> .
<b>Outgoing Call Duration Limit</b>	Defines the call duration limit for the outgoing calls, Default is <b>0 (No limit)</b> .
<b>Ring Frequency</b>	Configures ringing frequency for your phone. 15-60 Hz, Default is <b>20</b> Hz.
<b>Ring tones</b>	Configures the ring tone cadence preferences. User has 10 choices. The configuration, completed in Distinctive Ring Tones block in the same page, applies to ring tones cadences configured here.

## NAT Settings

If you plan to keep the handy tone within a private network behind a firewall, we recommend using STUN Server. The following three settings are useful in the STUN Server scenario:

1. STUN Server (under advanced settings webpage) enter a STUN server IP (or FQDN) that you may have, or look up a free public STUN server on the internet and enter it on this field. If using public IP, keep this field blank.
2. Use random SIP/RTP ports (under advanced settings webpage), this setting depends on your network settings. Generally, if you have multiple IP devices under the same network, it should be set to Yes. If using a public IP address, set this parameter to No.
3. NAT traversal (under the FXS web page) Set this to Yes when gateway is behind firewall on a private network.

## DTMF Methods

The HT801 support the following DTMF mode:

- DTMF in-audio
- DTMF via RTP (RFC2833)
- DTMF via SIP INFO

Set priority of DTMF methods according to your preference. This setting should be based on your server DTMF setting.

## Preferred Vocoder (Codec)

The HT801 supports following voice codecs. On FXS port page, choose the order of your favorite codecs:

- PCMU/A (or G711 $\mu$ /a)
- G729 A/B
- G723.1
- G726 (16/24/32/40)
- iLBC
- OPUS

## Configuring HT801 Through Voice Prompts

As mentioned previously, The HT801 has a built-in voice prompt menu for simple device configuration. Please refer to "[Understanding HT801 Interactive Voice Prompt Response Menu](#)" for more information about IVR and how to access its menu.

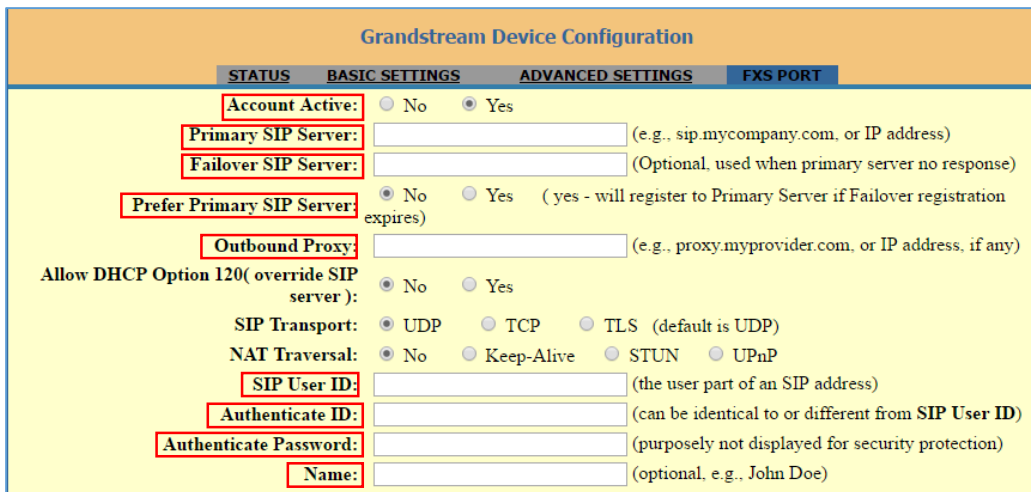

- **DHCP MODE**  
Select voice menu option 01 to enable HT801 to use DHCP.
- **STATIC IP MODE**  
Select voice menu option 01 to enable HT801 to use STATIC IP mode, then use option 02, 03, 04, 05 to set up IP address, Subnet Mask, Gateway and DNS server respectively.
- **FIRMWARE SERVER IP ADDRESS**  
Select voice menu option 13 to configure the IP address of the firmware server.
- **CONFIGURATION SERVER IP ADDRESS**  
Select voice menu option 14 to configure the IP address of the configuration server.
- **UPGRADE PROTOCOL**  
Select the menu option 15 to choose firmware and configuration upgrade protocol between TFTP / HTTP.
- **FIRMWARE UPGRADE MODE**  
Select voice menu option 17 to choose firmware upgrade mode among the following three options:  
1) Always check, 2) check when pre/suffix changes, and 3) never upgrade.

## Register a SIP Account

The HT801 supports 1 FXS port which can be configured with 1 SIP account. Please refer to the following steps in order to register your accounts via web user interface :

1. Access your HT801 web UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings.
4. Go to **FXS Port** page.
5. In **FXS Port** tab, set the following:
  - a. **Account Active** to **Yes**.
  - b. **Primary SIP Server** field with your SIP server IP address or FQDN.
  - c. **Failover SIP Server** with your Failover SIP Server IP address or FQDN. Leave empty if not available.
  - d. **Prefer Primary SIP Server** to **No** or **Yes** depending on your configuration. Set to **No** if no Failover SIP Server is defined. If “**Yes**”, account will register to Primary SIP Server when failover registration expires.
  - e. **Outbound Proxy**: Set your Outbound Proxy IP Address or FQDN. Leave empty if not available.
  - f. **SIP User ID**: User account information, provided by VoIP service provider (ITSP). Usually in the form of digit similar to phone number or actually a phone number.
  - g. **Authenticate ID**: SIP service subscriber’s Authenticate ID used for authentication. Can be identical to or different from SIP User ID.
  - h. **Authenticate Password**: SIP service subscriber’s account password to register to SIP server of ITSP. For security reasons, the password will field will be shown as empty.
  - i. **Name**: Any name to identify this specific user.
6. Press **Apply** at the bottom of the page to save your configuration.

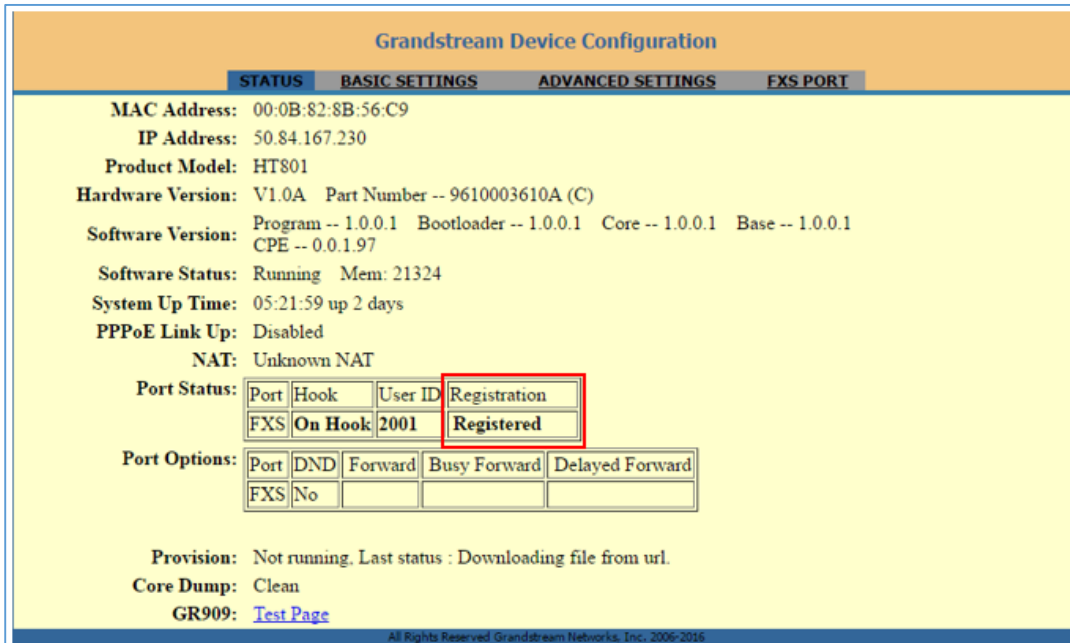

**Grandstream Device Configuration**

STATUS	BASIC SETTINGS	ADVANCED SETTINGS	FXS PORT
<b>Account Active:</b> <input type="radio"/> No <input checked="" type="radio"/> Yes			
<b>Primary SIP Server:</b> <input type="text"/> (e.g., sip.mycompany.com, or IP address)			
<b>Failover SIP Server:</b> <input type="text"/> (Optional, used when primary server no response)			
<b>Prefer Primary SIP Server:</b> <input checked="" type="radio"/> No <input type="radio"/> Yes (yes - will register to Primary Server if Failover registration expires)			
<b>Outbound Proxy:</b> <input type="text"/> (e.g., proxy.myprovider.com, or IP address, if any)			
<b>Allow DHCP Option 120( override SIP server ):</b> <input type="radio"/> No <input type="radio"/> Yes			
<b>SIP Transport:</b> <input checked="" type="radio"/> UDP <input type="radio"/> TCP <input type="radio"/> TLS (default is UDP)			
<b>NAT Traversal:</b> <input checked="" type="radio"/> No <input type="radio"/> Keep-Alive <input type="radio"/> STUN <input type="radio"/> UPnP			
<b>SIP User ID:</b> <input type="text"/> (the user part of an SIP address)			
<b>Authenticate ID:</b> <input type="text"/> (can be identical to or different from SIP User ID)			
<b>Authenticate Password:</b> <input type="text"/> (purposely not displayed for security protection)			
<b>Name:</b> <input type="text"/> (optional, e.g., John Doe)			

Figure 8: SIP Accounts Settings

After applying your configuration, your account will register to your SIP Server, you can verify if it has been correctly registered with your SIP server from your HT801 web interface under **Status > Port Status > Registration** (If it displays **Registered**, it means that your account is fully registered, otherwise it will display **Not Registered** so in this case you must double check the settings or contact your provider).

The screenshot shows the 'Grandstream Device Configuration' web interface. The 'STATUS' tab is selected. The 'Port Status' section shows a table with columns: Port, Hook, User ID, and Registration. The 'Port' is 'FXS', 'Hook' is 'On Hook', 'User ID' is '2001', and 'Registration' is 'Registered'. The 'Port Options' section shows a table with columns: Port, DND, Forward, Busy Forward, and Delayed Forward. The 'Port' is 'FXS', 'DND' is 'No', and the other options are empty. The 'Provision' status is 'Not running. Last status : Downloading file from url.' and the 'Core Dump' is 'Clean'. The 'GR909' link is 'Test Page'.

Figure 9: Account Status

## Call Features

The HT801 supports all the traditional and advanced telephony features.

Table 10: HT801 Call Features

Key	Call features
*02	<b>Forcing a Codec</b> (per call) *027110 (PCMU), *027111 (PCMA), *02723 (G723), *02729 (G729), *0272616 (G726-r16), *0272624 (G724-r24), *0272632 (G726-r32), *0272640 (G726-r40), *027201 (iLBC), *027202 (OPUS).
*03	<b>Disable LEC</b> (per call) Dial “*03” +” number “. <b>No</b> dial tone is played in the middle.
*16	<b>Enable SRTP.</b>
*17	<b>Disable SRTP.</b>
*30	<b>Block Caller ID</b> (for all subsequent calls).
*31	<b>Send Caller ID</b> (for all subsequent calls).
*47	<b>Direct IP Calling.</b> Dial “*47” + “IP address”. <b>No</b> dial tone is played in the middle.

<b>*50</b>	<b>Disable Call Waiting</b> (for all subsequent calls).
<b>*51</b>	<b>Enable Call Waiting</b> (for all subsequent calls).
<b>*67</b>	<b>Block Caller ID (per call)</b> . Dial “*67” +” number”. <b>No</b> dial tone is played in the middle.
<b>*82</b>	<b>Send Caller ID (per call)</b> . Dial “*67” +” number”. <b>No</b> dial tone is played in the middle.
<b>*69</b>	<b>Call Return Service</b> : Dial *69 and the phone will dial the last incoming phone number received.
<b>*70</b>	<b>Disable Call Waiting (per call)</b> . Dial “*70” +” number”. <b>No</b> dial tone is played in the middle.
<b>*71</b>	<b>Enable Call Waiting (per call)</b> . Dial “*71” +” number”. <b>No</b> dial tone is played in the middle.
<b>*72</b>	<b>Unconditional Call Forward</b> : Dial “*72” and then the forwarding number followed by “#”. Wait for dial tone and hang up. (Dial tone indicates successful forward)
<b>*73</b>	<b>Cancel Unconditional Call Forward</b> . To cancel “Unconditional Call Forward”, dial “*73”, wait for dial tone, then hang up.
<b>*74</b>	<b>Enable Paging Call</b> : Dial “*74” and then the destination phone number you want to page.
<b>*78</b>	<b>Enable Do Not Disturb (DND)</b> : When enabled all incoming calls are rejected.
<b>*79</b>	<b>Disable Do Not Disturb (DND)</b> : When disabled, incoming calls are accepted.
<b>*87</b>	<b>Blind Transfer</b> .
<b>*90</b>	<b>Busy Call Forward</b> : Dial “*90” and then the forwarding number followed by “#”. Wait for dial tone then hang up.
<b>*91</b>	<b>Cancel Busy Call Forward</b> . To cancel “Busy Call Forward”, dial “*91”, wait for dial tone, then hang up.
<b>*92</b>	<b>Delayed Call Forward</b> . Dial “*92” and then the forwarding number followed by “#”. Wait for dial tone then hang up.
<b>*93</b>	<b>Cancel Delayed Call Forward</b> . To cancel Delayed Call Forward, dial “*93”, wait for dial tone, then hang up.
<b>Flash/ Hook</b>	Toggles between active call and incoming call (call waiting tone). If not in conversation, flash/hook will switch to a new channel for a new call.
<b>#</b>	Pressing pound sign will serve as Re-Dial key.

## Rebooting HT801 from Remote

Press the “Reboot” button at the bottom of the configuration menu to reboot the ATA remotely. The web browser will then display a message window to confirm that reboot is underway. Wait 30 seconds to log in again.

## UPGRADING AND PROVISIONING

The HT801 can be upgraded via TFTP/HTTP/HTTPS by configuring the URL/IP Address for the TFTP/HTTP/HTTPS server and selecting a download method. Configure a valid URL for TFTP or HTTP/HTTPS; the server name can be FQDN or IP address.

### Examples of valid URLs:

firmware.grandstream.com

fw.ipvideotalk.com/gs

### Firmware Upgrade procedure

Please follow below steps in order to upgrade the firmware version of your HT801:

1. Access your HT801 UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings.
4. Go to **Advanced Settings > Firmware Upgrade and Provisioning** page, and enter the IP address or the FQDN for the upgrade server in "**Firmware Server Path**" field and choose to upgrade via **TFTP** or **HTTP/HTTPS**.
5. Make sure to check "**Always Check for New Firmware**".
6. Update the change by clicking the "**Apply**" button at the bottom of the page. Then "**Reboot**" or power cycle the HT801 to update the new firmware.

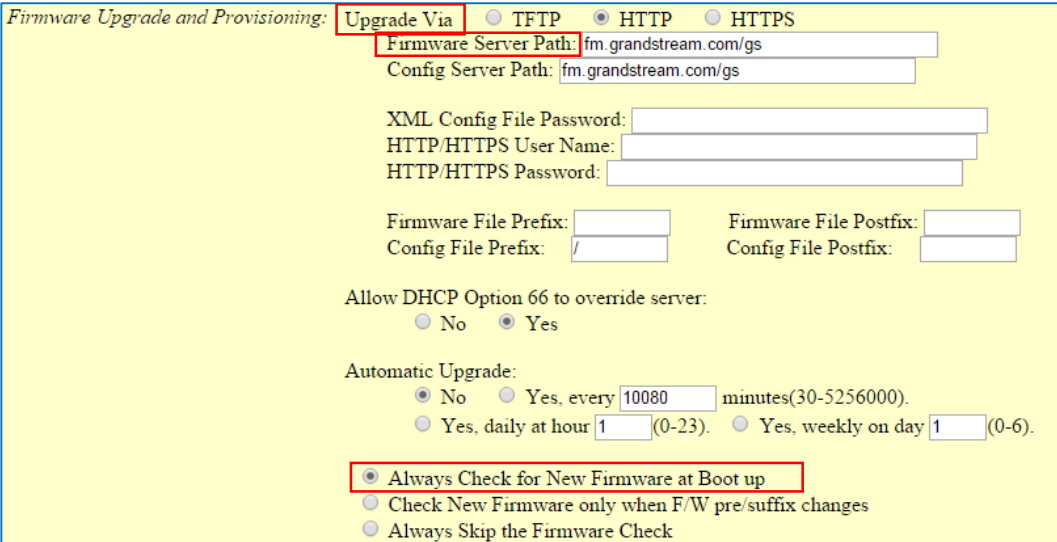

Figure 10: Firmware Upgrade Page

## Upgrading via Local Directory:

1. Download the firmware file from Grandstream web site;
2. Unzip it and copy the file in to a folder in your PC;
3. From the HT801 web interface (Advanced Settings page) you can browse your hard drive and select the folder you previously saved the file (HT801fw.bin);
4. Click "Upload Firmware" and wait few minutes until the new program is loaded.

**Note: Always check the status page to see that the program version has changed.**

## Upgrading via Local TFTP/HTTP Servers

For users that would like to use remote upgrading without a local TFTP/HTTP server, Grandstream offers a NAT-friendly HTTP server. This enables users to download the latest software upgrades for their devices via this server. Please refer to the webpage:

<http://www.grandstream.com/support/firmware>

Alternatively, users can download a free TFTP or HTTP server and conduct a local firmware upgrade. A free window version TFTP server is available for download from:

[http://www.solarwinds.com/products/freetools/free\\_tftp\\_server.aspx](http://www.solarwinds.com/products/freetools/free_tftp_server.aspx)

<http://tftpd32.jounin.net/>.

Instructions for local firmware upgrade via TFTP:

1. Unzip the firmware files and put all of them in the root directory of the TFTP server.
2. Connect the PC running the TFTP server and the phone to the same LAN segment.
3. Launch the TFTP server and go to the File menu->Configure->Security to change the TFTP server's default setting from "**Receive Only**" to "**Transmit Only**" for the firmware upgrade.
4. Start the TFTP server and configure the TFTP server in the phone's web configuration interface.
5. Configure the Firmware Server Path to the IP address of the PC.
6. Save and Apply the changes and reboot the HT801.

End users can also choose to download a free HTTP server from <http://httpd.apache.org/> or use Microsoft IIS web server.

## Firmware and Configuration File Prefix and Postfix

Firmware Prefix and Postfix allows device to download the firmware name with the matching Prefix and Postfix. This makes it the possible to store all of the firmware with different version in one single directory. Similarly, Config File Prefix and Postfix allows device to download the configuration file with the matching Prefix and Postfix. Thus multiple configuration files for the same device can be stored in one directory. In addition, when the field "Check New Firmware only when F/W pre/suffix changes" is set to "Yes", the device will only issue firmware upgrade request if there are changes in the firmware Prefix or Postfix.

## Managing Firmware and Configuration File Download

When “Automatic Upgrade” is set “**Yes, every**” the auto check will be done in the minute specified in this field. If set to “**daily at hour (0-23)**”, Service Provider can use P193 (Auto Check Interval) to have the devices do a daily check at the hour set in this field with either Firmware Server or Config Server. If set to “**weekly on day (0-6)**” the auto check will be done on the day specified in this field. This allows the device periodically check if there are any new changes need to be taken on a scheduled time. By defining different intervals in P193 for different devices, Server Provider can spread the Firmware or Configuration File download in minutes to reduce the Firmware or Provisioning Server load at any given time.

### Configuration File Download

Grandstream SIP Devices can be configured via the Web Interface as well as via a Configuration File (binary or XML) through TFTP or HTTP/HTTPS. The **Config Server Path** is the TFTP or HTTP/HTTPS server path for the configuration file. It needs to be set to a valid URL, either in FQDN or IP address format. The **Config Server Path** can be the same or different from the **Firmware Server Path**.

A configuration parameter is associated with each particular field in the web configuration page. A parameter consists of a Capital letter P and 2 to 3 (Could be extended to 4 in the future) digit numeric numbers. i.e., P2 is associated with the "New Password" in the Web GUI->Maintenance->Web/SSH Access page->Admin Password. For a detailed parameter list, please refer to the corresponding firmware release configuration template.

When the HT801 boots up or reboots, it will send a request to download a file named "cfgxxxxxxxxxxx" followed by a configuration XML file named "cfgxxxxxxxxxxx.xml", where "xxxxxxxxxxx" is the MAC address of the phone, i.e., "cfg000b820102ab" and "cfg000b820102ab.xml". If the download of "cfgxxxxxxxxxxx.xml" file is not successful, the provision program will download a generic cfg.xml file. The configuration file name should be in lower case letters.

For more details on XML provisioning, please refer to:

[http://www.grandstream.com/sites/default/files/Resources/gs\\_provisioning\\_guide.pdf](http://www.grandstream.com/sites/default/files/Resources/gs_provisioning_guide.pdf)

## RESTORE FACTORY DEFAULT SETTINGS

---

### **Warning:**

Restoring the Factory Default Settings will delete all configuration information on the phone. Please backup or print all the settings before you restore to the factory default settings. Grandstream is not responsible for restoring lost parameters and cannot connect your device to your VoIP service provider.

---

There are three (3) methods for resetting your unit:

### **Using the Reset Button**

To reset default factory settings using the reset button please follow the steps above:

1. Unplug the Ethernet cable.
2. Locate the reset hole on the back panel of your HT801.
3. Insert a pin in this hole, and press for about 7 seconds.
4. Take out the pin. All unit settings are restored to factory settings.

### **Using the IVR Command**

Reset default factory settings using the IVR prompt:

1. Dial “\*\*\*” for voice prompt.
2. Enter “99” and wait for “reset” voice prompt.
3. Enter the encoded MAC address (Look below on how to encode MAC address).
4. Wait 15 seconds and device will automatically reboot and restore factory settings.

### **Encode the MAC Address**

1. Locate the MAC address of the device. It is the 12-digit HEX number on the bottom of the unit.
2. Key in the MAC address. Use the following mapping:
  - 0-9: 0-9
  - A: 22 (press the “2” key twice, “A” will show on the LCD)
  - B: 222
  - C: 2222
  - D: 33 (press the “3” key twice, “D” will show on the LCD)
  - E: 333
  - F: 3333

For example: if the MAC address is 000b8200e395, it should be keyed in as “0002228200333395”.

### **Reset from Web Interface (Reset Type)**

1. Access your HT801 UI by entering its IP address in your favorite browser.
2. Enter your admin password (default: admin).
3. Press **Login** to access your settings.
4. Go to **Basic Settings > Reset Type**.
5. Press **Reset** button (after selecting the reset type).

- **Full Reset:** This will make a full reset.
- **ISP Data:** This will reset only the basic settings, like IP mode, PPPoE and Web port.
- **VOIP Data:** This will reset only the data related with a service provider like SIP server, sip user ID, provisioning and others.

#### **Note:**

- Factory Reset will be disabled if the “Lock keypad update” is set to “Yes”.
- If the HT801 was previously locked by your local service provider, pressing the RESET button will only restart the unit. The device will not return to factory default settings.

## EXPERIENCING HT801

Please visit our website: <http://www.grandstream.com> to receive the most up- to-date updates on firmware releases, additional features, FAQs, documentation and news on new products.

We encourage you to browse our [product related documentation](#), [FAQs](#) and [User and Developer Forum](#) for answers to your general questions. If you have purchased our products through a Grandstream Certified Partner or Reseller, please contact them directly for immediate support.

Our technical support staff is trained and ready to answer all of your questions. Contact a technical support member or [submit a trouble ticket online](#) to receive in-depth support.

Thank you again for purchasing Grandstream analogue telephone adapter, it will be sure to bring convenience to both your business and personal life.

**FCC Caution:**

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
